: of the clock frequency (Fclock), dropping rather rapidly beyond its -3dB point of
: 44% Fclock."

: In other words, for _Band_Limited_ white noise, a PN sequence generator is
: about as good as it gets.

Of course, the spectrum is composed of discrete frequencies which are all
harmonics of the repetition frequency of the sequence. So it's not at all
flat if you look with narrow enough bandwidth ;-) (You can make it better
by mixing with a "true-random" source; get the best of both worlds.)

Gary:

As you well know, I have avoided entering into this fruitless thread, in
its many incarnations, for a long time. But I couldn't resist:

At my home QTH I've talked around the world with my dipole 20 feet up in
the trees and with about 50 watts out. I have some great QSOs on CW.
Nobody seems to hear me on SSB, where my meager signal is spread out over
about 10 times the bandwidth. Now you suggest that I spread it out even
further to run FM!

Morse code is still useful for the low signal contacts.

My ear is better at interpolating missed dots and dashes than any of the
digital techniques that I've used, too.

>itself?

Yes. Ask anybody who's operated 80m from a tropical location (eg,
Africa) during the rainy season. The s-meter readings from
thunderstorms has to expereinced to be believed. And the noise,
being radio waves, propagates very nicely off the ionospere, thank
you.

With regard to propagation prediction, in addition to the concept
of MUF, there is a corresponding concept of LUF - lowest useable
frquency. The LUF is determined primarily by noise and d-layer
absorbtion. The noise is terrestrial in origon. W6EL's Miniprop
factors in LUF; I'm sure some of the other pgms do also.

>on the radio (which was usually much faster than I could copy, and I
>had no idea if what I _was_ copying was correct!).
>
I used to use Super Morse but have found a little annoying problem that
I think is significant when learning the code. I use the Farnsworth method
where the characters are sent at say 18 wpm while the words are at a slower
speed. When using the Farnsworth method I noticed that the spacing betwee
the characters is not consistent. In fact, any character ending in a dit had
the following character start early and any character ending with a dah
has the next chracter starting late.

Take the PARIS timing test as an example. Use 18 wpm character speed
and 5 wpm word speed. Listen to the space between the characters like
the ending of "P" and the start of "A" and compare that time to the time
between the "I" and the "S". The "PA" space is quite long while the "IS"
space is quite short. If any thing it should be the other way around because
the "I" is only two dits which is much shorter than dit dah dah di for the
"P". Even when using the Farnsworth method the start of the characters should
occur at the same time intervals as the non-Farnsworth method.

I have now switched to Morse Academy to teach students the code. There
are definitely an number of features in Super Morse I like and don't see
in Morse Academy but I think the issue of proper spacing is very important
when learning the code. It might be an advantage when trying to learn code
that is sent unevenly.

From: rbloom@netcom.com
Message-ID: <rbloomCEDxI8.4Cy@netcom.com>
Source record: 275536

I know there are propagation-prediction computer programs for
the HF bands that predict skip distance, MUF, etc, based on
ionospheric models. The question is this: do any of these models
also predict the atmospheric noise in any meaningful detail?
Do these propagation predictors I see in Ham Magazines predict
the "Noise" in "Signal-to-Noise Ratio", if so how? Do they
use the old CCIR set of 1 MHz maps? How relevant *is* a
atmospheric-noise figure, when, in fact, the dominant noise-factor
in the ham bands may very well be simply *crowding*, and other
man-made noise.

: I have a Realistic HTX-202 (my first radio) and was wondering what the
: 'standard' is for stepping through the frequencies while scanning?
: I can step by 5,10,15,20,25,50 or 100 kHz...

Depends on what the standard spacing is for your state. Most common
are 15 and 20 KHz. Unfortunately, you can't just use those spacings
for scanning, since the different sub-bands don't start at the same
spot mod 15 KHz or mod 20 KHz. So... if you're in a 20 Khz state,
then a 10 KHz step will hit everything. If you're in a 15 Khz state,
then you'll need to use the 5 KHz step to hit everything right on.

On my radio, if the signals are reasonably strong, a 10K step will
pick up everything, even though I'm in a 15 Khz state. This helps
for quick scanning.

All Mid-west and Eastern states, with the exception of Michigan, have
15K spacing. This is from the ARRL repeater book.

:
Sorry Gene, but the original post vanished....

That amp can be cleaned up and at least used to be a P.A. stage in a CW set,
or FM.

The power transistors they usually use are crummy ones for class AB work,
so are hairy to tame for use on SSB.
In essense, they put out parasitics of either 1 - 2 freqs or a hiss that
has a peak where ever the out put 'transformer' has a peak, and a peak
up on VHF low.
Using the usual .001 .01 .1 and 10uf by-pass caps on the B+ line right
by the transformer, & ferrit bead trick, may or may not cure the problem.
Running a 56 ohm 2 watt carbon comp. resistor in series with a .001-.0039 uf
cap, connect that from base to collector (do same for 2nd transistor if it
is push pull) will help some.
Placing 2 to 4 freeit beads ON the base and or collector 'wings' may be
a good way to cure the vhf hiss trouble....acts as a parasitic suppressor.
Just glue them in place once you find how many and position needed.

OK...with all that, at least it will run 'safe' (air worthy) for FM and CW
or true FSK.

To risk SSB, the bias has to be set 'just right' and track thermal changes--
which I've not gotten into...as I don't do SSB....only CW *
You'll probably get a zillion posts on how to properly bias from others!
(Gary may know!)

Then...you may be able to charge a price thats agreeable..or use it yerself.

* the only FM I do is occasional 2 mtrs.

> computer and never had this problem (same rig). Any suggestions?

Well... I had a similar problem, especially on 40m & 80m. My rig was interfering with the keyboard. When I transmitted it inserted all kinds of garbage keystrokes. Made it impossible to use a logging program or computer keyer. I just found the problem last weekend. This is slightly embarassing... I found the uhf coax connect going into my 30mhz low pass filter was push in about half way, with the shield part pulled back. Only the center conductor was touching. Yikesss!!!! I pushed the connector in and screwed on the shield on the connector and my problems went away. I guess it's been like that ever since I installed my antenna tuner. I've been working all states for WAS award on 40m with a loose connection.

Another reason for RFI in your case may also be that you do not have an adequate RF ground. Many people (including myself) make all the right efforts to insure that there is a good DC ground, but forget about the RF ground. I've just recently been thinking about this because of some of the recent articles in QST. In my case, I have a ground rod outside the window from my shack. I think for a good RF ground though, I need to add some ground radials either at my xmtr or at the grounding rod.

Hope you find a solution to your RFI.

Greetings! I was given an old UHF FM HT made by Standard Corp.
It has six channels and is Model No. C734l (C). I'd like to convert this
over to ham band usage and was wondering if anyone out there knew anything
about the radio and could guide me in this endeavor. Thanx.

Michael,

Just curious (no flames!): For you personally, would it be good or bad for
the ARRL to rent lists of names of recent successful license exam takers to
Amateur Radio-oriented business, groups, etc?

(BTW, the ARRL does rent its membership list, but it will be only too happy
to remove your name from those rented if you write and request it to do so. In
fact, you can check a box asking not to have your name rented out on your ARRL
Membership Application Form.)

Here is the add which appeared on p. 161 of my October 1993 QST:

A T T E N T I O N

PUBLIC SAFETY ANNOUNCEMENT

Tampering with Motorola's
Communication Technology is
Nothing Short of a Crime.

Motorola has been at the forefront of communications
technology for more than 60 years. Today, we offer a
greater array of communications products than ever
before. We are proud of our customers which are of
unparalleled public importance.

Theft of communications services and so-called
High-Tech piracy threaten the entire communication
industry's reputation for reliability. This conduct
not only damages the reputation of Motorola, Inc.
and the communications industry, but undermines
the very integrity of America's public and private
communications services.

Motorola intends to combat this conduct by
aggressively maintaining and enforcing its proprietary
rights to its hardware and software technology. Anyone
who has knowledge of illegal activities or has questions
concerning such activities is urged to contact Motorola
Inc. immediately at 1-800-325-4036. Contacts will be
kept confidential and may be made anonymously.

(Add is followed by trademarks and the note that the
trademarks are trademarks of Motorola, Inc. (c) 1993 Motorola, Inc.)

At the bottom of the add is a drawing of several comrades
representative of the working class. (A doctor, a policeman, man w/ hardhat,

man w/ overalls, fireman, operator, nurse, woman w/ book, man w/ tie.)
There are no radios or radio equipment in the drawing. The drawing is quite reminiscent of stalanistic propoganda.

> (as opposed to just when I'm transmitting) sufficient?
>
>Doug:

I have been using nicads for 24 years on my radio control model airplanes and have the following suggestions:

1. I discharge mine about once every 2-3 months. I use a specially designed (commercial) discharger which is set up specifically for nicad packs of 4 and 8 cells. The discharger shuts off at 1.1 volts per cell and reads out a capacity check. I usually charge my packs fully, then discharge to check the capacity. In a model airplane, if the pack dies, so does the airplane. Much more critical on every use than an HT. When my packs decrease in capacity to about 60%, I discard them for RC use (give them to the kids for their battery toys). By the way, the discharger begins to recharge them at a 50 mil rate after the discharge cycle shuts off.

2. I would recommend that you simply charge them when the low battery indicator comes on (your choice of how you measure that: i.e. while transmitting or just receiving). This is an excellent way to discharge them without going too far. If the pack is allowed to go to near zero, a stronger cell can reverse charge a weaker cell in the pack and ruin it.

3. The one thing you don't want to do, is to recharge it regularly without letting it run down to the battery low indicator. In time, some cells will take a "memory set" which means that it won't deliver its rated capacity. The discharge to 1.1 volts per cell (or whatever causes your low battery indicator to come on) should be sufficient to keep a memory from developing.

Aside from the high price, what annoys me about the radio is the CTCSS decode is an extra-cost option. Now for a kilo-buck, that should have been included. I played with the unit at the SW Div convention, had it been priced closer to 800 bucks, I might have gotten one. I think I'll wait.

Yes, but if I buy it I don't think it is piracy to modify it and if I can
find "hidden" features, what is wrong with enabling them. It would
be piracy if I made a copy of their software and then sold the copy.

>Thanks in advance.
>
> KE4FPZ
It happened in the Fall/Winter 1971, Ft. Devens MA. US Army Security Agency training for Non-Morse Intercept operators.

I was placed at a position that had a keyboard, headsets, and a screen that looked like the keyboard. They had one of the first computers to first teach us to touch type then once that was accomplished came the morse code.

Several times a day we would stand at Parade Rest behind our positions and the instructor would go through the alphabet with us....
DI DAH ALPHA
DAH DI DI DIT BRAVO
DAH DI DAH DIT CHARLIE

Ahhh! the sounds of 60 young men verbalizing the sacred language of Morse....

The computer would keep track of errors, and it behooves each solider to improve himself each and every day. Otherwise one would find a trashcan over his head screaming out...

DI DI DIT SIERRA
DI DI INDIA
DI DI DI DIT HOTEL

I never made that select group. But one was expected to go from 0 WPM to 18 WPM in 6 weeks. The threat, REMEDIAL TRAINING. Here there were no breaks outside. Breaks were standing at Parade Rest for ten minutes behind ones position. You were given 2 additional weeks to copy 10 minutes code with no more than 5 errors.

I did end up in Remedial training. It took me 6 days to pass.

So what was the incentive to pass.....it was during Vietnam, and everyone who failed went to either a Infantry or Armor training course who didn't....

The moral of this story is...practice, practice, practice. There is no other way around it. The more comfortable you are with code, the better your copy will be. I don't suggest 6 hours a day, 6 days a week...but after I hadn't copied any for about ten years. It took me 3 weeks at 30-60minutes a day to go from about 10WPM up to 22WPM. Find a quiet place, tell the family your not to be disturb and go at it.

>most are, but they bear a striking resemblance to telephones. what Ten-Tec is
>missing out on is coverage in the AES/HRO etc. catalogs where everything is
>roughly shown. you'd have to work to find the Ten-Tec stuff.

I think Ten-Tec will go away soon. They have dropped dealers. OK, they
have some valid complaints.

But they appear to have stopped attending Hamfests. They were not at the
Atlanta Hamfest this year. (Nor last year to my recollection).

Not that Atlanta was that great this year, but it is the largest GA
hamfest, and the other major vendors were there.

There are lot's of loyal Ten-Tec types in the South, and when they do
not even to bother to show, I wonder.

I was considering purchase of a Scout. I attended specifically to look
at one. They were not there. How is a person supposed to make a buying
decision? (No dealer, etc)

I suspect they have given up on the ham market. The big question is: do
they have enough commercial business to keep going?

I also think Ten-Tec missed several bets. The lack of a general coverage
rcvr locked me out for 2 major radio purchases. (I picked a TS-430, and
later a TS-400 AT instead.) I see no excuse on an HF rig not to provide
general coverage capability. (If they were still using crystals for the
LO to switch bands, then they were way behind technically.)

Anyway, the new rigs look pretty good, but still lack features. I would
consider them, but not if I cannot look at a rig without driving to TN!

3047. Understanding Antennas

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-05 04:06:49 UTC
From: asplund@aludra.usc.edu
Message-ID: <28qrsp$9t1@aludra.usc.edu>
Source record: 275569
Cross-posted to: sci.electronics,rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.scanner,alt.radio.scanner

Hello all,

I have a couple of basic questions regarding antenna theory. I was reading a book on the subject and, in a chapter about antenna performance, lists a chart showing "theoretical table of antenna gain". In the chart it shows a Half-Wave Dipole as having a 2.1 db gain over an isotropic radiator. Similarly, a 5/8 wave has a theoretical 3.3 db gain over the isotropic radiator.

Does anyone know how they arrive at these numbers? In specific, what are the formulas? I am interested in just the formulas for "whip" style antennas (1/4 wave, 1/2 wave, 5/8 wave). Does the 1/4 wave have any gain over the imaginary isotropic radiator?

Also, the book mentions that a 1/4 wave "whip" needs a ground plane to function correctly. Why does a 1/2 or 5/8 wave not need a ground plane to "function correctly" (like the 1/4 wave)?

Lastly, I have seen adds for 1/4 wave mobile antennas which state "no ground plane required", most are on-glass antennas. How do these antennas "function correctly"? Would it be better to have a ground plane, or do they create an artificial ground plane?

Any help and all responses are appreciated. Please send mail directly to me at: asplund@aludra.usc.edu.

Thank you in advance for the help!

This is a shame. I will talk to them about this when I next call them.

>There are lot's of loyal Ten-Tec types in the South, and when they do
>not even to bother to show, I wonder.

Huh? In the South? I find loyal Ten Tec guys up North and out here in
the West, too. I have not noticed any differences in the number of Ten
Tec rigs I run into in 4-land versus any other call district (in 25
years of HF).

I DO believe that there are a lot of loyal Ten Tec guys out in Europe. I
have seen some write that they like the Ten Tec stuff because the front
ends are more bulletproof (for 40) than the latest, greatest Kewood, Icom and
Yaesu radios. This says a LOT, since Europe has a lot of local b'cast there on
40, and the front end has to handle a lot of garbage.

>I was considering purchase of a Scout. I attended specifically to look
>at one. They were not there. How is a person supposed to make a buying

Again, I agree. A shame. I have heard a lot of Scouts locally, and figure
maybe if you ask around you can find one to play with.

>I suspect they have given up on the ham market. The big question is: do
>they have enough commercial business to keep going?

I don't believe so. There is an OMNI-VII coming and a Paragon II, according
to my sources.

>general coverage capability. (If they were still using crystals for the
^^^^^^^^^^^^^^^^^^^
>LO to switch bands, then they were way behind technically.)

Well, this may be a matter of what you are looking for. If you are
referring to the crystal mixing they use, it seems to produce a quieter
receiver than the other rigs, and many a radio expert likes a quiet
receiver. I do understand that other designs are getting better, but

from the local experts I trust, the Ten Tec's are still the best in
this respect, unless you pay a thousand more for another radio maybe.....

Just my two cents.

Tests run with the ax25 packet driver using a g3ruh modem rather than a
baycomm modem indicate a top speed of 8500 baud or so with a 386/33.
9600 baud will work if the ax25 driver is run on a 486/66.

It seems to me that this is a perfect example of HAM engineering. Using
$4500 dollars worth of number crunching processor to eliminate a $125 TNC.

If this sounds far fetched, remember the Kantronics KAM does all its bit
bashing in software rather than an HDLC chipset.

>... My experience has been that many hams think
>nothing about pirating software willy-nilly.

I suspect you'll find that the public in general thinks nothing of making copies of software - 'piracy', as the people who theoretically stand to lose money by this practice term it.

And although I make my living from software, I suspect that if Congress ever came to codify the will of the people in law, you'd find that making personal copies of software at no charge would become completely legal, since that's what the great majority of the public does.

But don't hold your breath.

I seem to recall hearing an interview in the early 80s that two out of every three copies of WordStar hadn't been paid for. I rather expect it's gotten worse since then.

Geoff Mendelson writes that there is current regulation on the
external power jack but not on the battery connector.
Geoff, I looked at my schemetic and it seems the regulator is built
into the battery pack--it's before the charge LED between the charging
jack and the NiCd. There is no difference in my HTX 202 between ext pwr
and battery pwr, they are tied together through identical diodes.
Do we have different schemetics? My schemetic indicates that the HT
would see the same from a 13.8V pack as it would if the ext jack was
plugged into a car lighter at 13.8v.

You can use the 500Hz filter for RTTY if you use the FSK setting. I
do that regularly. There is a RCA phono jack for FSK input from
TU/TNC. It sends space tone normally and mark if shorted. This is the
opposite of most other rigs. However, this can be easily changed by
using the set up menu in the rig.

This past summer A friend of mine was a host to a couple of exchange students from the CIS. One of these exchange students came from Kazakstan. He has been trying to contact her by sending mail and attempting phone calls. According to my friend Fran, the mail service is non existent and on the telephone, he has only been able to reach the capital city of Kazakstan, Alma-Ata. I suggested to him that maybe there is a way to send a message via ham radio. I don't know if the US has a third party traffic agreement with Kazakstan or not. If the US doesn't have a third party agreement, perhaps there are some hams in Western Europe that I could email to whose countries do have third party agreements with Kazakstan.
The town that this exchange student lives in is Taukent in the Chimkent region of southern Kazakstan. I can of course provide a complete name, address and telephone number to anyone that could pass the message. So any help that anyone out there can think of would be greatly appreciated. Please reply to me by email at the following address:

I have never used the rtty software from W1FB. Is it anything like the
software from WF1B? WF1B software is is useful for the CQ WW, ARRL
roundup, SARTG, BARTG and DXpedition mode. Over all it is pretty good,
although there are problems with the scoring. You need to check over
your log carefully after the contest to make sure it was scored correctly.
But it does log and dupe correctly. I have been using it since it came
out and will continue to use it.

Then again the idea of one using a $120 soundblaster to replace a $270 or
there abouts multimode unit does sound appealing. Also get sound to boot!
Maybe not 9600 baud but 1200 baud packet, slowscan, CW , RTTY, AMTOR,
PACTOR(?) should be possible with a Soundblaster. Should be a matter of time
before we see these show up for that unit. A lot of use $2000 computers to
hook up to those $120 TNC's by the way. 8-) 73!

What does "PUBLIC SAFETY ANNOUNCEMENT" mean?
Should I be concerned about my Public Servants using Motorola's radios for some reason? Is Motorola planning to activate some kind of remote control "fail-safe" circuit to render a radio that has been tampered with useless?

>further to run FM!

Ah DX, well that's different. Morse encoded CW is marvelous for "The Game". The standardized contacts don't require any real communications thruput. A few seconds to beep out the callsigns, ignore the rest since it never changes, and go on to the next contact. I'm sure some people enjoy that, but pardon me if I'm not impressed. To actually engage in an exchange of ideas usually requires a bit more thruput than that, or extraordinary patience. I find that 100 WPM RTTY is as slow as I care to communicate, and much prefer the rapid exchanges of ideas available with voice. It's a matter of taste, of course.

I had an Argonaut for many years. I used it with a simple doublet that I would toss into the trees when I operated portable. I never used CW, only SSB. Yet by choosing the proper band and time, I never lacked for interesting contacts. It's amazing what staying near the MUF can do for low power signals. Now I use a 100 watt IC735 and it offers a bit more latitude, but I rarely need the whole tenth gallon to make a contact. Note that I don't insist on operating in pileups, nor do I try to compete with VOA, that's what the full gallon home station with the big Rhombic is for. FM mobile on 10 meters, through some of the repeaters available, or direct, works just dandy for nice nearly noise free QSOs. I've chatted with the RO on a Canadian icebreaker, a fellow studying bugs up the Amazon, and thousands of other interesting people. Few of those contacts would have been of interest if thruput was restricted to only a few words per minute.

>itself?

It's certainly important on the lower bands. In summer, communications
on 75 meters is dominated by lightning and other atmospheric noise. It's
not unusual to see a S9 noise floor. In the winter it's usually much
quieter. On 20 meters and above, it's less of an issue unless there
is a nearby thunderstorm in progress.

I am presently helping a new Tech Plus set up a HF station. His city ɾes 60' x 45' and houses a 1 1/2 story apartment.
He would like to work 80/40/20/15/10 meters. City codes discourage tall verticals and long radials.
We are considering shortened dipoles, but there are no trees or tall connection points for mounting. What are the thoughts on inverted V's, slopers, etc?
(We would like to keep a low profile if possible.)
Any ideas or suggestions would be welcomed!

HELP!

I have owned one of these now for a month and I have been very pleased with
the radio. It only has one or two very small items that I do not like the
operation of (lack of a mute button and the use of a function key to enable
or disable a band).

The radio is very handy and inspite of its thickness it is very easy to hold.

>the formulas? I am interested in just the formulas for "whip" style
>antennas (1/4 wave, 1/2 wave, 5/8 wave). Does the 1/4 wave have any gain
>over the imaginary isotropic radiator?

There are two common methods used to arrive at the numbers. The first method is to assume that you know the current distribution on the antenna. You can then finger a vector magnetic potential, A, from an integral that runs over your current sources. From A, you can get the fields everywhere. Once you have the fields, you can find the maximum field stength either from a plot of the fields or by finding it directly from the equations (by setting the derivative equal to zero).

The method above works well for wire antennas when you have a half way reasonable idea what the current distribution _really is_ on the antenna. When you start to make more complex antennas, often you no longer have an intuitive feel for what the currents are doing. At this point, many poeple resort to what's called a "Methods of Moments" approach. With this approach, you assume that you know how to model the driving point of the antenna. Then, you set up a large matrix of equations that enforce field conditions on the surface of the antenna with respect to some assumed current at that point on the antenna. Once you solve the matrix, you have a very good idea of what the current on the antenna really is, and you can proceed as described above to find the fields and later the gain. The MoM technique is quite powerful, and fairly straightforward once you get used to it, but it's not the kind of thing you want to try and learn while watching Oprah at the same time.

A good book on this topic is, "Antenna Theory," by Constantine Balanis, published by John Wiley and Sons, 1982. Balanis has another book called something like, "Advanced Engineering Electromagnetics" that is also quite good.

Of course, you probably just want the end results of all that nasty math anyway, don't you? :-)

>Also, the book mentions that a 1/4 wave "whip" needs a ground plane to
>function correctly. Why does a 1/2 or 5/8 wave not need a ground plane to
>"function correctly" (like the 1/4 wave)?

A 1/2 wave antenna works well. Notice that the 1/2 wave antenna is a symmetrical device... the current you feed in one half of it has the same magnitude as the current you feed into the other half of it. Because of this symmetry, you can show that the electric field for the 1/2 wave antenna is zero in the plane of the feed point. Now, a perfect electric conductor forces the electric field on the conductor to be zero. Therefore, if you place a large perfectly conducting plate in the plane of the feed point, the fields everywhere above the conducting plate have to be exactly the same as those in the original problem. Therefore, we have reduced our 1/2 wave antenna to a 1/4 wave antenna and a ground plane.

Of course, in reality ground planes aren't usually perfect conductors, nor are they infinite. There's been a lot of research into modeling the effects of these imperfect ground planes. Balanis talks about it a fair deal.

>Lastly, I have seen adds for 1/4 wave mobile antennas which state "no
>ground plane required", most are on-glass antennas. How do these antennas
>"function correctly"? Would it be better to have a ground plane, or do they
>create an artificial ground plane?

This one I'll leave to someone more familiar with the exact antenna in question.

Just another datapoint, when I got my ticket a couple of years ago, the same
thing happened, ie about a week before the liscense came, I received
4 or 5 different catalogs related to ham radio. Also, when my wife got
her ticket last year, the same thing happened. We both took our tests from
local groups, one at a hamfest and one at a regularly scheduled session,
but they were different organizations (same state, different cities).
My guess would be ARRL sold the info, and actually I'm glad it was sold,
because I like to get catalogs.

* * * * S P E C I A L E V E N T S T A T I O N * * * *
* * * * ! ! ! T H I S W E E K E N D ! ! ! * * * *

The Carbon Amateur Radio Club will be hosting a special event station
at the annual Carbon County (Pennsylvania) Fall Foliage Festival.
In addition to celebrating the beautiful Autumn colors of the Pocono
Mountains, this year marks the Sesquicentennial of Carbon County.
It also happens to coincide with the PA QSO Party. Carbon County has
been one of the elusive counties in the past so you county hunters
can get lucky.

We will be operating all HF bands in addition to 2m FM on our
147.255 (+600TX) repeater and packet using the call WA3CGB (Carbon's
Greatest Booster).

Our packet station will be accessible via the EPALAN node near Allentown,
PA. Some packet routes from other areas are:

From Ontario:
COBURG->CRTLND->TUNKPA->EPALAN->WA3CGB
From New Hampshire:
WNDHM->CHSTR->STMFRD->CRTLAN->TUNKPA->EPALAN->WA3CGB
From Connecticut:
ICRC07->SPRFLD->BERK->CHSTR->CRTLND->TUNKPA->EPALAN->WA3CGB

All contacted stations who send a #10 or bigger SASE to WA3CGB will
receive an attractive QSL certificate suitable for framing or wrapping fish.

>Yes, but if I buy it I don't think it is piracy to modify it and if I can
>find "hidden" features, what is wrong with enabling them. It would
>be piracy if I made a copy of their software and then sold the copy.

This is a typical technique used by many manufacturers of industrial,
consumer and medical electronic microprocessor based equipment.

It's typical of upper management/marketing/field service people to
ask the software engineers to "design-in" "full" functionality in a
"base" model unit. They can then bill the unsuspecting consumer
when they "install" (when all that's really done is to enable) the
"new" option.

Later, the aboved mentioned personnel come back whining after the
special key-sequence is somehow "leaked" or passed on to individuals
or corporations who have not purchased the option.

Note I am NOT talking about the use of a special "enabling" diskette
or program or whatever here, but knowledge of a simple key sequence.

Where I work (we manufacture medical equipment), we have long ago
abandoned the use of "passwords" to enable "optional" software.

While I do NOT support those who illegally obtain such key-sequences,
I also believe certain manufacturers reap what they have sown.

: It would seem to be a hula-hoop which has had some wire stuffed inside it,
: and then been resealed. The exact amount of wire, (and any other parts)
: is what I'm interested in, and indeed how the thing works.

"stuffed" inside it? Well, what you have is a large diameter coil

:
: To use it, you tune your LW radio to Radio 4 198 Khz, then place the
: hoopyloop adjacent to the radio, and move everything around until you
: get good reception.
:
: There are NO mechanical or direct electrical connections between the hoopy-loop
: and the radio, and the hoopyloop has no 'power', it is simply a passive
: device.
:
:
: I would like to understand exactly how this remarkable device works, as to
: the unknowledgeable by-stander it would seem to be exactly that, a magical
: device !
:
: Mark.

The magic is inductive coupling.

The loop, being a large coil, is able to pick up the weaker signals
a lot better than the built in ferrit bar coil with in the radio.

By placing one by the other so the coils are aligned, what ever the
big coil picks up, is passed on to the little coil.

One question: Does your loopyhoop have a tuner knob on it?...maybe its
on a base, with a box that covers a bit of the loop, and inside there
would be a thing that looks like an egg slicing machine? Or a square
plastic box (don't open it!) with a drive shaft coming out?

If so, thats a tuning condenser. That , along with the coil, serves to tune
in on the frequency you are after.
You'd twiddle the knob until you get strongest reception.

If not...then it is simply a non-tuned coil of wire, which is enough
to work OK to pull in stations.

I just purchased an ICOM RP-4020 440 repeater for ham use and I was wondering if anyone has had any experence with the controller in this unit. I know I would be better off if I replaced it with another controller but presently I can't afford to do that. My question is if anyone has played around with the programing to correct, what I feel is a major weakness, the ID'er timing. I can't believe that one could pay that much money to get a unit with a $.50 controller. Does anyone have any ideas or heard anything, even from ICOM, on fixes for this thing?

Thanks in advance,
Eric Struble

>Anyone ever use it and have any comments on it??
>
> Lee
>

Isn't there another letter in the call?

I finally splurged and bought a copy. I used it in the last
contest. I look at and review software as part of my job.
For what it does, don't know how it could be much better.
You need a mouse to take advantage of it. I use it on an
old XT and it ran great. Boy did it make the contest more fun.
You just use the mouse to clik on the call sign or other info and
it automatically does what it needs to. Has all the other
contest features similiar to CT. and of course it does all the
post-contest paper work effortlessly.

A friend of mine called the 1-800 number and wanted to know what the fuss
was about...and basically, the guy that was talking of intellectual propert
rights and such is on the right path. What they are after is people selling
enhancement software that adds features ~rwithout the owner paying for them.
Furthermore, the add is placed so that people that peddle the bootleg RIB
boxes, cables, and the copyrighted RSS software will be out of business.

The local motorola service center here charges 40 bucks each time you need
something programmed....if I owned a RIB, RSS, and the proper cables, I
could advertise programming for 20 bucks and undercut the local motorola
shop.....motorola wants to keep the ENTIRE market for themselves....I'm
surprised that they've not bitched about 3rd party battery vendors!

OH well...my $0.02 .

>discovers this by reverse-engineering and publishes the
>"fixes", I again fail to see how this is considered
>"software piracy".

>Perhaps you'd like to explain in a little more detail
>the reasoning?

Here's a motorola example:

Suppose I own a motorola ~rMT1000 99ch VHF portable.

The radio has 2 different band spreads you can program the radio,
136-158 or something and then 146-174. Of course, this makes the radio
not a wise choice if I am in CAP, MARS, HAM operator, and a cop or fireman.
The way the software is set up, I can only get one or the other spread out
of the radio.... HOWEVER, you can modify the RSS programming software to
get BOTH band spreads out of the radio...(Note: the radio is capable of
the entire 136-174, but software limits you to only one or the other spreads)

Motorola just lost revenue....they would have liked for me to have bought
another MT1000 for the lo-split and have my other for the hi-split...

>requires a bit more thruput than that, or extraordinary patience.

Well, I have found that my CW contacts are more meaningful than
some of the ones I have seen described. I guess it all depends on
what you put into it. This has even been true for many of my DX
contacts, although I have not engaged many DX stations in hours-long
ragchews. In the case of DX, many of the stations choose to do
quick contacts, perhaps to help them in their awards chasing, or because
their grasp of English is nearly as bad as our grasp of Bohemian.
If the only words they know are RST, name and the Q signals, that
is probably all they are going to use.

Nonetheless, I have managed to exchange quite a few ideas on CW with
DX and stateside stations. I will probably get to do it again real
soon, just as soon as I get my new station set up. I am still working
on necessities such as repairs to my heating system (fixer-upper house).

>I find that 100 WPM RTTY is as slow as I care to communicate,
>and much prefer the rapid exchanges of ideas available with voice.

This is true at 13 WPM. At 40 wpm, with abbreviations and Q sigs, things
can move remarkably close to voice speeds.

> Anybody know of a good ham equipment dealer around D.C. or Maryland

There are three ham stores in the area. The Maryland Radio Center is in Laurel, Md, about 30 min by car from Bethesda. The Electronic Equipment Bank (EEB) is in Vienna, VA, about 20 min (non-rush-hour) by car. HRO is near Woodbridge, VA, about 45 min to an hour south of Bethesda. None are accessable by Metro. Maryland Radio Center and EEB are your best bets. Both have selections of new and used rigs. EEB has about a dozen HF sets all hooked up that you can play with, as well as a dozen or so SWL receivers. They also have many books and magazines. Maryland Radio Center has far fewer rigs hooked up, and no SWL stuff, and (it seems to me) fewer books and magazines. Overall, EEB probably has somewhat more stuff, especially used ham gear. Prices seem to be slightly better at Maryland Radio Center. Good luck.

Information Missing (asplund@aludra.usc.edu) wrote:

: I have a couple of basic questions regarding antenna theory. I was reading
: a book on the subject and, in a chapter about antenna performance,
: lists a chart showing "theoretical table of antenna gain". In the chart
: it shows a Half-Wave Dipole as having a 2.1 db gain over an isotropic
: radiator. Similarly, a 5/8 wave has a theoretical 3.3 db gain over the
: isotropic radiator.

It is difficult to compare the gain of any type of ground-plane antenna
to an antenna in free space.

Any antenna over an (infinite) ground plane has an inherent 3 dB advantage
over an antenna in free space, simply because the GP antenna only has to
radiate power in half of space. A 1/4-wave vertical over an infinite
ground plane has 3 dB "gain" over a 1/2-wave dipole in free space. If you
place a vertical dipole some distance over an infinite ground plane, it
will have 6 dB gain over the 1/4-wave at some vertical angles and minus
infinity gain at other angles.

To make this clearer, imagine a 1/2-wave vertical dipole in free space.
You could place an infinite ground plane between the two 1/4-wave halves,
perpendicular to the wires, without any change in the field pattern or
feedpoint characteristics (since it occupies a zero-potential plane in
the dipole field.) It's easy to see that the dipole is now radiating
1/2 its power above the ground plane and 1/2 below. In effect, we now
have two 1/4-wave verticals over ground plane, one pointing up and one
pointing down. Each vertical is generating the same field strength
(in it's half of the universe) as the dipole did, but with only 1/2
the power. Therefore each vertical over a ground plane has 3 dB "gain"
over the dipole in free space.

In reality, most 1/4-wave "ground plane" antennas are not installed
over anything like an infinite ground plane. Usually there are 3 or 4
1/4-wave radials at the base. You can think of such an antenna as a
vertical dipole where the bottom half has been split into 3 or 4 wires
and bent out at an angle. Compared to a vertical dipole at the same
height, it will have about the same, or a little less, gain, depending
on the angle of the radials with respect to the radiator. (The angle
is often about 45 degrees, to give a good 50-ohm match.)

To answer your original question, a 5/8-wave vertical over a ground plane
has about 3 dB gain over a 1/4-wave vertical over ground plane. What the
gain is relative to "isotropic" or to a 1/2-wave dipole in free space
is a matter of definition.

Now there's a complicated answer to a simple question!

As those of us that do CW can tell your ability on CW must be fairly limited. Most of the anti-CW hams who attack it seem to have this in common. A decent CW contact shares the same things as a SSB contact ie... name, RST and QTH. GASP! They share the same standardized format at the start of QSO! How can this be? Funny how the rest of QSO is different from the start. Then again, it's funny how a little skill can make for a enjoyable QSO on CW. I have chatted for over an our about G5RVs and other parts of ham radio on CW many times. Worked DX in exactly the same format as a SSB contact. Had friends build rigs from scratch for very little money and have a great time with CW at 1 watt. It's a major part of ham radio and no matter how much the the anti-CW types wish this wasn't true that's the way it is. 73!

3109. HF Mobile Antennas?

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-05 20:50:28 UTC
From: jpb@donner.cc.bellcore.com
Message-ID: <1993Oct5.205028.14104@porthos.cc.bellcore.com>
Source record: 275492

I am considering going HF mobile and was looking for first-hand comments on HF mobile antennas (ie. Hustler, Texas Bugcatcher, Ham Stick, Outbacker, Spider, etc.). I will like to operate most of the HF bands thru 40 mtrs. I'm interested in hearing about performance and quality in particular. I will most likely be running 100W into an Antenna Tuner. Is there any recommended reading material on this topic? I did see an add for "40+5 yrs. of HF Mobileering" by W6AAQ but have no knowledge beyond the listing.

Jim (KZ2H)

3110. VE3ONT final announcement

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-05 21:21:44 UTC
From: MOWE%SLUMUS.BITNET@CUNYVM.CUNY.EDU
Message-ID: <05OCT93.17671425.0024.MUSIC@SLUMUS>
Source record: 275476

VE3ONT EME Operation
Final October Announcement

The Toronto VHF Society plans to use the 150' dish at the Algonquin Provincial Park this coming weekend, Oct. 9 & 10. Operation will be as follows:

Date VE3ONT Approx.
(UTC) TX Freq RX Freq time (UTC)

Saturday, Oct. 9 432.050 432.050-060 0445-1830
Sunday, Oct. 10 144.029 144.025-030 0545-1915

The dish can be lowered to about 4-5 degrees elevation so there is a short period between Moonrise and first echos.

Operating suggestions:

Doppler shift will move the apparent VE3ONT frequency a bit.. This will make VE3ONT appear to be a little "off frequency," so tune around.

Approx. Doppler shift: Moonrise Moonset

432 MHz + 1.0 kHz - 0.65 kHz
144 MHz + 0.34 kHz - 0.23 kHz

Note that we will be operating "split"; please spread out. Also, please avoid duplicate QSOs.

VE3ONT will be operating in the "work 'em as quickly as you can" mode most of the time. If conditions seem to be marginal, we will revert to sequenced operation, in which VE3ONT transmits the first 30 seconds of each minute. Note that this 30-second sequencing will be rare. We will make every effort to work small and horizon-only stations.

We will make announcements concerning a planned November operation at a later date.

Michael Owen, W9IP

From: dadams@cray.com
Message-ID: <1993Oct5.162443.17129@hemlock.cray.com>
Source record: 275487

I got a ballot in the mail for ARRL Board Elections. I have not seen any debate on any of the issues. Who are the candidates? (I know the incumbents are.) I don`t even know if there are any issues other than code/no-code, which isn`t an issue as far as I am concerned.

Any comments?

For an application in Remote Sensing I am looking for an earth magnetic
field detector / flux gate sensor (as used in aircraft) to determine attitude
and compass direction of a buoy. How accurate are those gauges and where are
they available?
I was told Precision Navigation, Inc. manufactures such devices,
but I haven't been able to find the address. Does anybody know this company?

Thanks for any hints!

I do remember getting an ad from a QSL card printer before my license came. "Amateur" appeared as "Amature" in 3 separate places, so it was useful to know in advance that I didn't need to bother with them - I wouldn't trust QSL printing so someone who is that illiterate.

I occasionally get mail for "E Derek Wills" and that obviously comes from the callbook info (the E standing for Extra), but as long as nobody telephones me I have no objection. It's mostly stuff that the well-rounded ham wants to read, anyway. Since I am not well-rounded (except in the stomach region), most of the stuff goes in the same place as the Best Products Catalog that comes for Webster Q. Smogpule every month or so.

Try calling Standard Radio and tell them you want the service manual for
that radio. I don't offhand know the telco # for Standard but they advertise
all the time in most ham rags.

You need to determine if the radio can be tuned to the amateur band; my
guess is yes, it seems most UHF 450-470Mhz gear can tune down to 440Mhz.

If so, order the crystal(s) you need from a good vendor (I think Standard
even sells xtals), install them and tune the radio *according to the service
manual*, making allowances that you are tuning out of band.

Software piracy is a problem. Intellectual property rights should be observed. But the "theoretically" above is also right on. I'd suggest that most of the lost sales are pure fiction because people wouldn't buy the software at the publisher's price that they pirate.

Commercial piracy is a problem because if it weren't illegal to make copies, businesses would buy one copy of a software package and make enterprise wide copies. But how many individuals would buy a $2,000 CAD package for home use? Any copying doesn't represent lost sales, it represents a larger trained user base who will support the product's purchase in their commercial life.

Borland showed the right way to fight piracy by having a reasonable price structure, including the documentation in a bound volume, and having a license agreement that doesn't ban copying, instead banning simultaneous use on multiple machines. "Like a book" licensing they call it. Few people photocopy entire books rather than buying them. Software produced and sold like books doesn't have a big piracy problem. Increasing use of CD-ROM distribution can reinforce this "like a book" philosophy.

There's a growing secondary market in software where used copies are sold. This violates the license agreement of most software, but it's done anyway by people who don't consider themselves pirates. That's because they treat software, "like a book".

>Yes, but if I buy it I don't think it is piracy to modify it and if I can
>find "hidden" features, what is wrong with enabling them. It would
>be piracy if I made a copy of their software and then sold the copy.

This is a complex issue. On the one hand, Motorola and others have had a problem with people hacking their control ROMs to allow theft of services. This includes changing the serial number of a cellphone or tricking the ROM in a TV descrambler. On the other hand, they've been lazy by using the same ROM in many different radio models and selecting different feature sets by jumpers or secret control sequences. They consider those different features extra cost "options" that you're "stealing", so they consider user manipulation of their ROMs piracy.

Is that a legitimate concern or not? I suspect that most people feel that a purchase that gives them physical possession of an item allows them to use any and all features the item may contain. "Like a book", it's theirs to scribble in, go over with yellow markers, rip out pages and assemble in a more useful order, resell, etc. This is going to be an increasing dilemma for manufacturers and users as more hardware features are really implemented as changed firmware behavior. "Pirating" and hacking firmware is becoming a cottage industry.

Hams and radio firmware is becoming a particular issue since hams traditionally have taken used commercial radios and shifted them to amateur service. With many of today's radios, that's not just a matter of changing crystals and retuning. Today, it often involves hacking a ROM. Is that legitimate modification, or is it piracy of intellectual property? Motorola seems to be saying it's the latter.

This may be one of the first salvos in a legal process that started with the FCC mandating radios that users are not able to take "out of band". It started with HF linears and CB, went from there to

commercial band radios that can't be user programmed, and now to scanners that can't be modified to receive cellular service. Of course we know that anything can be modified, so now the government and the companies are looking to lawyers to protect what they can't protect by design. With many radio features now firmware, this issue isn't going to go away.

Several positive trends continue this month. Readership is up dramatically in all newsgroups (which is why they call this time of the year the "September Surge"). The two top newsgroups, rec.radio.amateur.misc and rec.radio.shortwave, are roughly tied, as as they were last month. The newly-created rec.radio.amateur.* and rec.radio.scanner newsgroups are continuing to grow in readership and propagation. It is expected that they will continue along the same growth patterns that previously-created newsgroups like rec.radio.info have followed and settle out at about 60-70% propagation. If these new newsgroups still haven't reached your site, please ask your news administrator to create them (refer him/her to the new newsgroup announcements by Dave Lawrence in news.announce.newgroups or the messages posted to the new newsgroups piling up in "junk" :-). Especially point out to him/her that cost/per-reader/per-month is significantly down in all newsgroups.

Readership rankings among the new rec.radio.amateur.* newsgroups have been in flux. Currently rec.radio.amateur.homebrew has the highest readership, although all are within roughly the same order of magnitude. The defunct newsgroup rec.radio.amateur.packet has been rmgrouped as of September 21st, 1993, and is no longer connected to the PACKET-RADIO mailing list. Netters interested in packet-radio discussion should use rec.radio.amateur.digital.misc and the HAM-DIGITAL mailing list. Propagation has started to gradually drop in the old newsgroup, down 5 points from last month. There is a Usenet Request for Discussion (RFD) tentatively scheduled for January 1994, to either reconsider the rec.radio.amateur.digital.tcp-ip vote, merge all digital interests into rec.radio.amateur.digital, or possibly even revert back to rec.radio.amateur.packet. Watch news.announce.newsgroups (or subscribe to the rec.radio.amateur Working Group mailing list at rra-wg-request@amdahl.com) for further developments.

Note also that the defunct rec.ham-radio hierarchy reappears this month. If the newsgroups are still active at your site, please try to persuade your your news administrators to delete them as these groups have been rendered obsolete (for almost 3 years now) by the rec.radio.amateur hierarchy.

3126. Testing in Nashville Area?

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-06 00:09:34 UTC
From: HEAGYWS@ctrvax.Vanderbilt.Edu
Message-ID: <1993Oct6.000934.7431@news.vanderbilt.edu>
Source record: 275493

Does anyone know of any testing for the technician no-code that is done in the Nashville or surrounding area? I have been having a difficult time contacting the people who sponor the tests that appear on the list on the NET. I finally contacted a gentleman who was very helpful but the test he knew of was not scheduled until December. My work schedule is such that there is a very good possibility that after I wait until December, I may still miss the test due to work conflicts. I would be willing to drive a little way if necessary.

Thanks for the help...Win

Maybe this would be completely accurate if you'd change "will screw up"
to "may...." (well, HE said to correct him if he was wrong and then you
come along and ....you know)

Now that we're informed, we (royal 'we') believe that the pilot was
actually a benefactor of all the people on that flight. further, to
get irritated at the pilot for saying that is closely akin to the passenger
who gets irate when his pilot delays takeoff to repair an intermittent

engine problem on a Boeing 707. I *like* petty pilots like that.

Well, how about: his cassette deck eats tapes, his walkman does not? (you've got to be more *creative* about this stuff.)

Also, he really has a police (or cell phone) monitor and wants to put in his glove compartment and drive around looking quite innocent...and *you* thought he was just an innocent who didn't know his apple from his orange!.

3132. ARRL Letter 9/27/93

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-06 02:08:45 UTC
From: marcbg@feenix.metronet.com
Message-ID: <arll0927@ampr.org>
Source record: 275507
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

The ARRL Letter
Vol. 12, No. 18
September 27, 1993
FCC lauds amateurs for interference resolution;
L.A. office finds drop in TVI/RFI complaints
Interference complaints are down significantly in Southern California, according to the FCC's Los Angeles office of the Field Operations Bureau, and amateur volunteers are cited as the prevailing reason for the decline.
The FCC said that it has "noted a significant decrease in the number of complaints involving amateur radio operators causing interference to consumer electronic equipment." A July survey of interference case data conducted by the Commission's Los Angeles office showed a 42% decrease in amateur-TVI/phone interference complaints, the FCC said.
The survey compared complaints from January 1989 to June 1993.
"This significant decrease," the FCC said, "is primarily due to the exemplary work of the local volunteer amateur auxiliaries (of the ARRL, see Editor's note) which intervene when TVI or telephone interference occurs. The auxiliary members volunteer their time and expertise to inspect amateur radio installations and offer technical advice as well as helping troubleshoot the problem with method(s) of shielding, filtering, grounding, etc.
"The effort of the auxiliary is significant," the FCC said, "because of the recent change in FCC policy where field offices no longer routinely investigate individual TVI or telephone interference complaints on a one-to-one basis. The auxiliary is commended for continuing to work on these complaints even though the FCC no longer requires them to work on these interference cases."
The Commission, reacting to budget constraints, now provides self-help information for individuals to use in resolving interference, and works with consumer groups in solving problems on a larger scale.
"The Commission is redirecting its resources to attack interference problems at their roots. The continuing work of the auxiliary has resulted in fewer complaints reported to the FCC.
"This voluntary work of the auxiliary," the FCC

said, "should be applauded by amateur operators everywhere. They continue to make the Amateur Radio Service more self sufficient and promote goodwill between amateurs and all parties involved.

"It should also be noted," the FCC said, "that the auxiliary continues to accept complaints of amateur-to amateur interference cases. The Los Angeles FCC Field Office is fortunate to have some of the finest auxiliary volunteers in their area and amateur operators are encouraged to take advantage of their expertise," the FCC said.

(Editor's note: The FCC in this case has used the term "amateur auxiliary" in a somewhat generic form. The ARRL Amateur Auxiliary exists primarily to assist the FCC in enforcement actions. But FCC Field Offices are often most familiar with local ARRL Amateur Auxiliary members and call on them for assistance in resolving interference cases; Amateur Auxiliary members are, according to ARRL Field Services Manager Rick Palm, K1CE, generally ready and willing to assist in such matters even though they do not fall directly within their responsibilities.

Other ARRL volunteers who often assist in interference resolution include Technical Advisors and TVI/RFI committees of ARRL-affiliated clubs.

A detailed description of the ARRL Amateur Auxiliary is in *QST* for December, 1992, page 55).

Town honors Headquarters on A.R. Awareness Day

ARRL Heaquarters is well known in the town of Newington, the office building having been a prominent fixture at 225 Main Street since 1965; the 120-ft tower erected in the spring of 1978 doesn't hurt, either!

This year in conjunction with Amateur Radio Awareness Day on Sept. 18 the town recognized Amateur Radio with the following proclamation:

"WHEREAS the American Radio Relay League (ARRL), the backbone of Amateur Radio in the United States, has declared September 18, 1993 as "Amateur Radio Awareness Day"; and

"WHEREAS, the Town of Newington is the national headquarters location of said ARRL; and

"WHEREAS, 'ham radio operators' are often the first to get word out of an area hit by a hurricane, earthquake, or other major disaster; and

"WHEREAS, amateur radio organizations, in cooperation with those in public service, also provide much needed communications and assistance for local events such as Newington's Memorial Day Parade and provide additional 'eyes and ears' for the Newington Police Department on Halloween Eve, as well as conduct free classes by volunteer instructors to teach the public how to become a licensed amateur operator; and

"WHEREAS, there exists in Newington a local club

entitled 'Newington Amateur Radio League (NARL)' which provides the above and other services; and

"WHEREAS, amateur radio operators licensed by the Federal Communications Commission are forbidden by federal law to charge for services, and organizations that require their services may call on them for assistance within the limits of NARL's available man and woman power;

"Now, Therefore, I, Rodney B. Mortensen, Mayor of the Town of Newington, do hereby proclaim Saturday, September 18, 1993, as AMATEUR RADIO AWARENESS DAY in the Town of Newington."

FCC FINES RETAILER FOR
OFFERING MODIFICATION

The FCC has ordered Amateur Radio Supply of Seattle to pay a fine of $5,600 for selling an Amateur Radio transceiver and offering to modify it to be able to transmit and receive in the Private Land Mobile and Marine Radio Services.

According to the FCC, the sale took place in December, 1991, and in July of 1992 the Commission's Seattle office issued a Notice of Apparent Liability, followed by a response from Amateur Radio Supply. The FCC said it reviewed the response and then issued a Notice of Forfeiture for $5,600.

The Commission said that reasons given for the store's actions -- training of a new salesperson and many years in the business of serving the Amateur Radio community -- were not persuasive, although the FCC considered the store's "clean record" in mitigating the amount of the fine.

PROPOSED TOWER STIRS
CONCERN IN ARIZONA TOWN

A commercial FM station in Arizona is trying to get around strict "beautification" rules by proposing to disguise a new transmitting tower as a saguaro cactus.

KXLL told officials of Paradise Valley, a bedroom community north of Phoenix that does not allow commercial operations of any kind (not even a gasoline station) that it would like to build the tower at the crest of Mummy Mountain, in the center of the town; the ersatz saguaro (which is the symbol of Arizona) would house both the tower and transmitting antenna itself.

Because the transmitter site has no real saguaros nearby, KXLL co-owner Katherine S. Klein told the Tempe-Mesa *News Tribune*, "the station would place up to three real cactuses around their artificial cousin.

"You wouldn't be able to tell them apart," Klein told the newspaper.

According to Harry Hyder, W7IV, of nearby Tempe, Paradise Valley's most distinguished citizen is former U.S. Senator Barry Goldwater, K7UGA, who has a tall "Christmas

tree" of Yagi antennas.
"Perhaps he was 'grandfathered,'" Hyder said.
AEA NAMES CALIF. WOMAN
1993 AMBASSADOR WINNER
Advanced Electronics Applications has named Catherine Gunderson, N6OOS, its 1993 Amateur Ambassador Award winner. Gunderson, 41, of Santa Cruz, California, is director of the Redwood Youth Foundation, a non-profit youth education program.
In September 1992 Gunderson organized a contact with shuttle astronaut Jay Apt, N5QWL, during a SAREX flight. Students at Del Mar Middle School managed a six-minute contact with the crew. According to AEA, the feat was accomplished with "only a small radio and a home-made antenna they adjusted every 20 seconds."
Gunderson's name will be engraved on the Amateur Ambassador Award trophy which permanently resides at ARRL Headquarters. {photo requested but not here yet}.
POLICE FEAR FOUL PLAY IN
YOUNG HAM'S DISAPPEARANCE
A 13-year-old Gardner, Massachusetts amateur has been missing since August 27 and police suspect foul play. Nathan A. Taylor, WZ1W, is believed to have traveled to the Houston area, possibly with an adult, according to Gardner police. He was described by his parents as very bright but hyperactive and moody. Although an Extra Class ham, his most recent interest has been in computers.
Both the Houston Police Department and the FBI have become involved in the case, which is being treated as more serious than just a "runaway," according to Gardner police.
Nathan Taylor is 5 ft, 5 in tall and weighs about 105 pounds, with blue eyes, light brown/blonde hair, and wears eyeglasses.
Anyone with information on Nathan is asked to call Detective Bill Grasmuck of the City of Gardner (Mass.) Police Department, at 508-632-5600.
Nathan was still missing as of September 23, 1993.
CANDADIANS CALLED TO ARMS
OVER PROPOSED NEW LAWS
The Radio Amateurs of Canada (RAC) has issued an "urgent notice" for its members to react to a proposed government rules change that could adversely affect amateurs.
In a September 13, 1993, news bulletin from RAC headquarters in Kingston, Ontario, Canadian amateurs were told that
"Industry, Science and Technology Canada, the government department replacing Communications Canada," RAC said, "has just released TRC-86, a draft document entitled 'Criteria for Resolution of Immunity Complaints Involving

Fundamental Emissions of Radiocommunications Transmitters.'
"This document suggests and proposes," RAC said, "to make ministerial determinations, as provided by law in the Radio Communications Act, by a measurement of the following values of field strength, quote 'measured in accordance with accepted engineering practice, at the site of the equipment being affected by harmful interference:
"'a) for broadcast receivers and associated equipment I. 1.83 volts per meter, equivalent to a 125 dB above a microvolt per meter;

"'b) for all radio sensitive equipment I. 3.16 volts per meter, equivalent to 130 dB above one microvolt per meter.'
"Radio amateurs should not accept this one-sided technical solution," RAC told its members, "which further obligates the transmitter owner and inequitably places no mandatory requirement whatsoever on the manufacturers of such radio equipmentI.
"There is further ambiguity in the definitions of the two classes of equipment mentioned above, that VCRs and compact disc accessories may qualify to be deemed broadcast receivers if they are attached to equipment capable of receiving broadcast signals.
"Over 80% of these cases involving Amateur use of the spectrum 1.8 to 30 MHz have been resolved by reducing the conducted interference on any cable entering the affected equipment. External shielding is not remedial nor necessary in these circumstances. A radiated measurement does not account for random localized re-radiation, household wiring resonance effects or place any obligation on the manufacturers of the devices to meet any requirement for radiosensitivity.
"The EMC Committee of RAC will respond to the proposals of this document I. this is an URGENT MATTER as the paper will be published in the Canada Gazette in early 1994 and can become law."
220 MHz band in jeopardy
In other news from Canada, according to the RAC, Industry and Science Canada (formerly the Department of Communications) has invited public discussion on a newly released paper on spectrum allocation and use in the range 30-960 MHz. The amateur primary allocation at 220-222 MHz (which U.S. amateurs already have lost to commercial interests) is under review.
"Canada's amateurs must get behind RAD in an all out effort to retain this important VHF segment," RAC said, citing growth in amateur licensees of more than 55 per cent, to 40,000, since 1990.
BRIEFS

* The launch of SAREX flight STS-58 has been pushed back again, to October 14 at 1453 UTC for a 13 day mission. On board are William S. McArthur Jr., KC5ACR, and Martin J. Fettman, KC5AXA. Flight information updates will be available on W1AW as the launch date nears.
SAREX flight STS-60 is tentatively scheduled for November 10, 1993, but likely will be delayed into 1994.
* The Columbia Institute for Tele-Information will hold its Second Annual Training Workshop for Telecommunications Regulators November 15-19, 1993, in New York City. Among events scheduled is a welcoming overview as well as the closing address by Eli Noam, KE2PN, a Columbia professor of telecommunications. More information is available from the Institute at 212-854-4222 (fax 212-932 7816).
* Amateur licensing processing times at the FCC's Gettysburg, Pennsylvania facility have been running at near their desired maximum of 90 days; both a continued large amount of applications and inadequate staffing are cited. Recent examinees can expect to wait 12-14 weeks for their license to arrive from the FCC.
* Peter Chadwick, G3RZP, president of the Radio Society of Great Britain, represented the Society in July at a garden party at Buckingham Palace. HRH Prince Phillip is a Patron of the RSGB.
And the RSGB recently reported that their new Direct Debit Payment Service, allowing members to spread their annual dues payment over several months, has "proved to be extremely popular with existing members I and has attracted many new members following the advertising campaign: 'It's Never Been Easier to Join.'"
* The newest DXCC country may be Eritrea, which has been recommended by the ARRL DX Advisory Advisory Committee but still faces approval by the League's Awards Committee. Eritrea was a DXCC countty after World War 2; it was conquered by British Forces in 1941, became federated with Ethiopia in 1952, and was made a province of Ethiopia in 1962. At that time it was deleted from the DXCC list.
The DXAC was convinced that Eritrea now has emerged as an independent country but was split on a recommended effective date for valid contacts with the new country.
DO NOT send QSL cards to the DXCC Desk until the announcement that Eritrea has officially been added to the DXCC list and a date for acceptance of cards has been set.
* As of September 13, 82 members of the U.S. House of Representatives had become co-sponsors of The Amateur Radio Service Joint Resolution (H.J. Res. 199); 12 senators were co-sponsors of the Senate version, S.J. 90. A full list of co-sponsors of the resolutions is scheduled for November *QST*.

* The newest call sign among the Headquarters staff
is N1QDO, sported by Educational Correspondent Tracy
Bedlack, a veteran of the Educational Activities Department.
* The Montserrat Amateur Radio Society will operate
station VP2M from its new clubhouse November 14,
commemorating both the 15th anniversary of the Society and
the 500th anniversary of the naming of the Island by
Christopher Columbus during his second voyage to the West
Indies in 1493.
A story about Montserrat by Stu Stevens, K8SJ,
appears in October *QST*.
* The 1993 Boy Scouts of America Jamboree-on-the-Air
will be held October 16 and 17, the 36th running of this
event. W1AW will carry more information as the date nears.
Contact the ARRL Educational Activities Department
of see September *QST*, page 45, for information on how you
can get involved.

SB PROP @ ARL $ARLP039
ARLP039 Propagation de KT7H

ZCZC AP01
QST de W1AW
Propagation Forecast Bulletin 39 ARLP039
>From Tad Cook, KT7H
Seattle, WA October 1, 1993
To all radio amateurs

SB PROP ARL ARLP039
ARLP039 Propagation de KT7H

Solar activity rose last week. The flux shot unexpectedly above 100, and on September 29 it was 116.4. It has not been this high in the past three months, since June 30. Solar flux was higher on five of the previous seven days than the average for the previous ninety days. It will probably drop again, reaching 85 after the middle of October.

Geomagnetic activity was quiet to unsettled last week, with the K index bouncing from one to four. As this bulletin is being written late Thursday night, minor storm levels are predicted for the next few days due to a coronal hole. October 10 could also bring another geomagnetic upset.

Right now is probably the peak of the fall season for the higher bands.

Sunspot Numbers from September 23 through 29 were 30, 30, 60, 74, 73, 72 and 79, with a mean of 59.7. 10.7 cm flux was 81.5, 85.9, 96, 106.3, 104.4, 111.3 and 116.4, with a mean of 100.3.

The projection for this week is from Slidell, Louisiana to ZD9, Tristan da Cuhna, which is near 38 degrees south latitude and 11 degrees west longitude.

80 meters looks good from 2300 to 0700z, peaking from 0130 to 0530. 40 meters should be open from 2230 to 0800z, with the best period from 2330 to 0630. 30 meters should be open from 2130 to 0830z, and best from 2300 to 0700. 20 meters should be open from 2000 to 0100z and from 0630 to 0830. On some days it may be open from 0100 to 0630. 17 meters looks best from 1800 to 2300z, and 15 meters from 1300 to 2100. 12 meters looks good from 1330 to 1800z, and on some days until 2100 or later. 10 meters looks good for most days from 1400 to 1730z, and on some days from 1300 to 2200.

Is there any way to rejuvenate dead NiCad battery packs, without taking them apart to get to the individual cells? My camcorder seems to kill battery packs pretty rapidly (they have little capacity after a few months of use). The system is so automated, you cannot easily overcharge (charger shuts off) or completely discharge (camera shuts off) the battery.

Sometimes folks hook up a big electrolytic capacitor to a NiCad cell to blow out the dendrites. Any opinions on whether that would work on a non-disassemble-able 6V battery pack?

(I hope this does not turn into a big discussion of whether or not the memory effect exists.)

: but I haven't been able to find the address. Does anybody know this company?

: Thanks for any hints!

hi stefan... i'm sure the aircraft sensors cost more than their weight in
gold, but there is a low cost sensor from Dinsmore Instrument Company,
1814 Remell Street, Flint, MI 48503, 313-744-1330, fax 313-744-1790,
i bought a couple of their sensors to use as antenna position indicators
but never got around to using them... specs for the one i bought are:
Vcc 5.00vdc
Current 18-19 mils
output voltage 0.34 to 0.40 volts above and below "crossing"
voltage, which is between 2.4 to 2.6 volts
output source current no more than 4 mils
outside flux density not limited and excess flux will not
harm the sensor
operating temp -40C to +85C
weight 2.25 grams
damped to operate to indicate a return from 90deg disp. in
approx 2.5 seconds but may be supplied without
damping on request

cost, as best i remember about 20-25 bux per sensor...

hope this helps you... Mitch, WA4OSR in Mobile, Alabama

Yes, the whole point about SOS is that it is very monotonous and easy to pick out (and easy to send), which are ideal requirements for a distress signal.

>>My guess would be ARRL sold the info, and actually I'm glad it was sold,
>>because I like to get catalogs.

Let's clarify the distinction here. The ARRL does offer mailing lists of our MEMBERSHIP database for sale. It is sold to ham radio dealers, QSL card printers and the like. I will make two points about this, though. We do have a box on our membership application that one can check to ensure that one's name and address are not sold. Also, this is NOT big bucks for the ARRL. Our Circulations Manager told me that this is just not worth the aggravation and hassle for the few K bucks it brings in per year.

I think the ham radio dealers are probably getting the FCC database for most of their sales. They turn to us when they want a list of NJ ARRL members, etc. I appreciate the occasional hammy thing that shows up in my mailbox, too, so I don't mind if the ARRL or FCC sells my name. If I get stuff I don't like, I just toss it. So far, no ads for erotica, etc., so I guess everyone is using good judgement.

Now, this thread has been about the sale of info from the VEC database. Bart Jahnke recently posted a pretty clear explanation about this. The bottom line -- THE ARRL VEC DOES NOT SELL ANY INFORMATION GARNERED FROM ARRL VE SESSIONS. If anyone still has questions, contact bjahnke@arrl.org.

}
}John

You are partially wrong John. The part about enhanced software is correct, the rest is wrong. Reprogramming the radio with RSS is OK, it is those folks who have some hacked up version that try to make a living adding features not paid for that the company is after.

>because they treat software, "like a book".
>Gary

when i first saw that ad, i thought, "what a great ad for Ericson/GE".

of course similar things are going on in other "software" businesses like music where some folks there have decided that there can be no reselling of their products (artists think they should get more royalities, record companies think such reselling of out-of-print titles impacts new sales, etc.)

then again, maybe motorola wants to get out of SELLING the radio and just LEASE the radios -- you get a monthly income that way and it's easier to keep the radios from finding their way into backwater markets and suppress the price somewhat. none of this put the police/fire on the new system and give the old system to the parks/recreation people sort of thing that people do when they OWN the radios - make 'em lease 'em and we control what they pay and how they can be used.

Does this sort of screwyness imply that Moto thinks they're at the end of the road technically (or at least at the point where there is no place to go that will be profitable) and the second-sources are catching up with them?

I want to see them lease CPU ICs. You can't buy a powerPC, you only leased it - and you can only use software that we deem appropriate. sorta like saying you can only run 486 native code on your 486. no apps that could run on a 8086 or 80286 allowed.

(conspiracy theorists would get started on how this is just another veiled attack on property rights leading up to a totalitarian state, but it's not my thing either...)

|> Motorola just lost revenue....they would have liked for me to have bought
|> another MT1000 for the lo-split and have my other for the hi-split...

Again, I say "so what"?

Too bad Motorola "lost" revenue, but the fact of the matter is that if
I purchase the radio, and decide to make my own firmware modifications,
that's my business. Its no different than if I purchase a 486PC from
the local compu-store and decide to modify the Phoenix BIOS to augment
system performance.

(I'm assuming, of course, that there is no form of trade-secret or other
legal agreement between Motorola and the purchaser...)

In fact, just recently I did do something along these lines. I purchased
a Hamtronics repeater, and reverse-engineered the firmware to learn how
the machine worked at the port level. Then, I modified the firmware to
include features that *I* wanted, but were not available. The owner of
Hamtronics kept yelling "But the firmware is copyrighted!" and I kept
yelling "So what?" I wasn't taking his firmware and publishing it as
my own, I was taking it and making improvements upon it for my own
purposes - in the course of which I found some interesting "features"
that were not enabled in the firmware. This type of activity is
completely legal.

In fact, I even bet it would be totally legal for someone to publish
a list of "patches" to reprogram Motorola radios. "If you have radio
XXX, changing memory location 0x0123 from a 0xe0 to an 0xf0 and this
will enable receive from 110mhz thru 220mhz".

Now, if someone were actually taking a different copy of Motorola
firmware and selling it on the side to make a few extra bucks,
then without a doubt this would be an infringement of Motorola's
intellectual property rights, and I believe that Motorola should
pursue those violations.

However, I do not believe that someone installing a "patch" to existing firmware constitutes an intellectual property violation, especially if the patch is nothing more than setting a byte-flag somewhere. For Motorola to say that memory location 0x123 is "copyrighted" is foolish. If the patch actually consisted of replacing lines of code in the firmware with different lines that Motorola wrote, then that too would be a violation of Motorola's rights.

Of course, since I really have no idea how Motorola radios are programmed, this is really all moot, since you could turn around and tell me that they use an entirely different method.

Of course, not everyone who is tested by an ARRL VE is an ARRL
member. Thus you're receiving benefit as a member from people who
are not members.

Since the ARRL/VEC doesn't sell license information, this whole
thread is moot, anyway.

This answer is about as good as saying "On Account Of Because..."

Just because something is copyrighted, that does not mean that I am prohibited from modifying it. Nor does it prohibit me from showing someone else how to modify their copy.

What it does do is prohibit me from taking your copy and selling my own copies of it.

Just as a book can be purchased and the manuscript within it modified, so can a piece of computer firmware. Likewise, I can turn around and sell *MY* modifications to the book - "If you insert these words here, it makes the story better" - and so I can also do the same thing to computer firmware.

It almost sounds to me like Motorola wants to redefine copyrights to suit their own purposes.

I have recently finished testing a number of antennas for a Dec.
QST New Ham article on HF mobiling. If you want the best get
the original texas bug catcher from GLA.. rather expensive, but
haven't found anything that came close. After writing the article
I sold my Hustler sytem and purchased A bug catcher system.. have it
on a small Acura.. signals are about 4 S units better or more. I
operate SSB/CW with a Ten Tec Argonaut 509... 3watts mobile.
I get out real well with the Bug Catcher.

The people who make ham sticks have a 40-10 North Carolina
bug catcher for $90. Works well. The next after these in my
opinion was the Ham sticks, which were a little better than
the Hustlers.

For multiband the Spider 4 band works well 10,15,20,40.

Otherwise known as the "Thread that would not Die!"

Interesting how some people persist in the belief that I...

a. Hate pilots
b. Cause trouble
c. Disobey regulations
d. Feel that I know more than the Captain
e. I'm anti-code
f. Etc.

I often hear the phrase, "Thems are the rules" and in this case the Captain made a reference to them there rules. I thought, "Humm, now I can find out which exactly rules them is". On this VERY newsgroup people have made vague reference to "them there rules". Rather than take the ravings of an assortment of armchair lawyers, here was the opportunity to get the information about "them there rules" first-hand from someone that should know. So I asked.

In follow-ups to the original posting, a few persons have bothered to actually cite the section numbers and such of the regulations. [Thanks!]

Let me repeat what I had said orginally.

At the beginning of the flight, the Captain came on the intercom and announced that using certain types of electronic gear was prohibited on the airline and that said prohibition was due to FAA regulations.

Note: During the flight, the HT stayed inside the carry-on bag where it was packed. I occupied myself reading the escape map, catalogs and barf bag notes.

At the end of the flight, I stopped at the front and asked the Captain which FAA regulations were those that covered the prohibited electronic gear.

The Captain appologized for not knowing the exact regulation number but said that the announcement was company policy. And that if I wrote to the airline, they could probably provide me with the regulation reference.

Laugh, but about a year ago someone from "Intel" posted a "press release"
announcing new Intel pricing structure, which basically gave you a certain
number of CPU cycles when you bought the CPU. Then, after you had run out,
you could "buy" more cycles from Intel.

Needless to say, the posting was a forgery, but it was a fantastic
spoof, and you wouldn't believe the number of people who thought it was
a legit posting.

If Motorola really wants to protect themselves from third-party
firmware modifications, then what they should do is sell the radios with
that stipulation indicated in the sales contract. Then, it becomes a
civil matter between Motorola and the people who bought the radio, not
the people who know that turning Bit #3 in Memory location 0x123 will
enable full-band receive capabilities, etc.

Yet another case of innovation through litigation, folks.

|>
|> Jeff

You state that as fact, but it is only an opinion. The facts are;

It has been an integral part of Ham radio since it's inception.
It's popularity is waning.
Other services (maritime, etc) are dropping it.
Other countries are dropping it.
Newer modes of operation are quickly overtaking it in popularity.
Pro-coders still prefer it and want to keep it alive by
requiring a MASTERY (13 WPM, 20WPM) of it rather than an
INTRODUCTION (5 WPM) to it.
No-coders are treated as whiners simply because they are forward
looking and would rather spend the time on becoming familiar
with other modes.

In case you can't determine my stand on the subject based on the unbiased
statements above ;-) - I am for the elimination of 13 WPM and 20 WPM as well
as having the bandplan written into part 97 so that the rights of the
pro-coders are protected (not guaranteed unfortunately) by law.

Should be pretty cheap. All new Dodge Caravans/Plymouth Voyager LE models
have a flux gate compass with digital readout as part of the trip computer.

3-axis sensors may be a little more expensive. "Physics Today" advertises
some bench models (which push the state of the art in sensitivity) for
$5K.

Into the fray I leap, once again....

Gary, don't get me started on the DX issue (wham bam, 59, 73, thank you
ma'am) but that game is played both with CW and SSB, to say nothing of
RTTY. I really enjoyed my 30 minute ragchew with the guy in Iceland this
morning (it's warmer there in the winter than in Chicago! Why do they call

it Iceland?).

CW has always been an integral part of the hobby (underline hobby). Sure, it's not the most efficient way to talk but it's fun!

If you want maximum efficiency of communications there are many other ways to do so, most of which are available for a price -- Why use ham radio? To me, ham radio's allure largely includes the knowledge that I made the connection myself (all right, I didn't build my Icom IC735, but the rest is mine) - I didn't depend of phone companies stringing wires or someone placing a satellite in space. This is often not the most efficient way to communicate, but it's a great hobby (underline great hobby).

Ed makes a good point about the ability of CW to be an efficient means of communicating. I would add to that by saying that if I miss a dot or a dash I have gotten pretty good at interpolating to figure out what the missing letter was. This is a much more effective means of doing this interpolation than with RTTY. I've gotten somewhat impatient with the reties of AMTOR and HF Packet. Sometimes these make these "faster" means of communication much slower.

So, Gary, there is no need to attack CW as a viable means of communication in ham radio. I'm glad it's there and hope it always will be.

How does one use Coherent 4.2 with X-Window and ka9q to communicate with another X-Window system, such as a Sun Workstation? I understand that SLIP makes a serial port/modem look like a TCP/IP connection of some sort. My goal is to be able to run an X program on a remote workstation and display the GUI on my coherent system. I appreciate any comments on the subject.

Hi there folks,

I was wondering if anyone out there knows anything about a receiver
manufactured by Allied Radio (of Chicago, Ill) called a "Knight Spanmaster".
It has 4 bands, and it looks like it receives from ~1.6Mhz - ~30Mhz.
It is missing the tubes (it takes 2 different sized tubes).

Does anybody have any literature on this receiver they would like to copy and
send to me? Anybody have an idea on what tubes I need to get for this receiver?

The price was right (free!), and I'd like to fire it up to see if it works,
however without tubes, it's a worthless dust collector.

If you could reply via email, I would appreciate it as I'm quite backed up
with my newsgroups (what can I say, work calls!). Thanks in advance.

Dave

NO! The copyright laws do not even make copying per se illegal. Copying is only illegal if the intent of the copying is for financial gain, that is, you must make copies and sell them. There is absolutely no prohibition in the US copyright law (as ammended in 1989) which prohibits "tampering" with firmware.

I wondered about this ad, when I read it in September's 73 (which I only got a few days ago, after I sent a nasty fax to Wayne Green). Does this mean they don't want us Amateurs to use Motorola radios anymore? Tampering just because we want to move them into Amateur bands....

Motorola's concerns over this issue are deeply rooted. I worked in the two way radio back in the early 1970's, Motorola had just started to release two-way radios taken in on trade. This was according to the my local National Sevice Organiztion Center (as they were called back then), previously the equipment traded in was center to a central location to prevent resale to small businesses thus eliminating one source of competion for the Motorola sales people. Motorola has always been quick to guard their market of "add ons" for their equipment as well. They are very profit oriented, and at loss as to what to do with invasion of thrid party vendors that have sprung up since the 1980's.

At least that's how I view the situation at hand.

True

> It's popularity is waning.

Not true and the crowded conditions down at the bottom end of the bands don't support your arguement at all. Time and time again I have a hard time finding a spot to call CQ on the CW portions of the band. When I hear plenty of room every night on CW in which to call CQ I will agree with you then. The truth is there is NOT enough room on CW for everyone to operate! This is a fallacy that the anti-CW types keep desperately trying to get everyone to believe. Tell a big enough lie and everyone will believe it.

> Other countries are dropping it.

Not true, Only Japan and it gets around it with limiting power to 10 watts.

> Newer modes of operation are quickly overtaking it in popularity.

Not true and it's more like they are taking each other over in popularity.

> No-coders are treated as whiners simply because they are forward
> looking and would rather spend the time on becoming familiar
> with other modes.

Now that is NOT true, most No-coders would rather talk on their 2 meter handhelds then make any effort at going at the other modes. However this true of the other parts of amateur radio. The satellites are wide open (DX+) to the no-code techs and I don't exactly see them flooding them with their calls. It's still a matter of wanting something for nothing. I still support the no-code license but I am not as enthusiastic about it as I once was. All I see is this pattern, first no-code, then tests are too hard, then no tests and then CB worldwide at it's finest. The fact is that CW and Amateur Radio were here first before the no-codes showed up. To no one's great surprise the no-codes are screaming about getting access to the HF bands with no real effort on their part. If they eliminate the CW requirement (they will someday) and I imagine in their infinite wisdom make the tests even easier, I just can't wait to what happens to HF. CB is a good case for what can happen when you do exactly what everyone seems to want. No code, no test and no quality! As a matter of fact CB is the perfect place! It has no code, no test and you can operate worldwide with it (FCC gave up). It is exactly what everyone wants! However for some reason (I can't imagine why) CB is

garbage. Kinda proves my point doesn't it!

<dave@rsd.dl.nec.com> wrote:
>NO! The copyright laws do not even make copying per se illegal. Copying
>is only illegal if the intent of the copying is for financial gain, that
>is, you must make copies and sell them.

This is also wrong. Copying and distribution of a copyrighted work is
usually illegal, whether or not money is made. There are specific
exceptions granted by the copyright statutes and rulings. The October
issue of _Communications of the ACM_ has an interesting analysis of the
issues and exploration of the grey areas. _CACM_ is available in most
college libraries.

The article also discussed issues of modification of copyrighted works,
and issues of reverse engineering, but not too heavily.

Stephen

I am not a lawyer, and this is not legal advice. It _is_ advice to get
information from a lawyer, whether in _CACM_ or in personal consultation.

|> science or math background (or even, in come questions, the vocabulary) to
|> learn the subjects included in the Novice written (Element 2), much less
|> the Tech written (Element 3a).

Yeah, I always get a kick out of those stories in QST:
"4 YEAR OLD PASSES EXTRA!"

Can you say "rote memorization"? Good, I knew you could.

|> I've never been able to distinguish a no-code Tech license from one with
|> code - in fact, the FCC can't either. The only way to tell if someone has
|> a no code license is if they say so.

There is an easier way to tell. Around here, we just listen to the
repeater and scan for key phrases like "Yeah, I'm working on my
code".

There is one no-clue bozo in this area who has been "working on his code"
for two and a half years now. After the first 18 months, he decided that
studying the 5 WPM was "too hard", and decided to study at the 13WPM level
instead, which was "easier". At the last VE session, when he failed his
13WPM test for the 10th time (obviously he's going for the "I guessed right on
7 out of 10!!!" method) he asked the VE team for a "refund".

Yup, around here, its really easy to pick out the
no-clues on the local 2-meter good-buddy box.

3171. Re: Multiband Wire Antenna

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-06 18:47:26 UTC
From: watson@wink.corp.sgi.com
Message-ID: <WATSON.93Oct6104726@wink.corp.sgi.com>
Source record: 275333

I'm getting surprisingly good results from an 80-40-20-15-10 shortened dipole only 42' long. It's hung at about a 120 degree inverted V, inside my attic due to terrible deed restrictions. It's about 25 feet above the ground. There isn't too much metal in my attic and the shingles are wood.

This antenna was built by W9INN antennas (who advertise in QST and elsewhere). It is well designed and tunes easily -- but I'm sure it almost always does require some tuning to get the resonance points exactly right. I use an AEA HF analyst to view the SWR graph across frequency ranges. That's an incredibly useful device. It costs over $300 but is one of those things like scopes and tube testers that are easily shared between several people.

As you might expect, the low bands are very narrow -- I think the 2:1 SWR is only about 37KHz wide on 80M -- but with a little MFJ tuner I'm getting a signal out very satisfactorily.

I'm very happy with this antenna and with W9INN's service.

Zack Lau (zlau@arrl.org) wrote:

[Intermodulation distortion]
: specifications often aren't relevant to how well a radio
: works in Europe. They might be if they were measured over a wide
: variety of tone spacings. But, for single spacing of 20 or 100
: kHz, you really don't get the information you need to know. An
: amateur bands only receiver with filters will often outperform
: a general coverage receiver with better DR/IMD/Intercept numbers,
: simply because the wider RF filters let too much stuff through,
: despite the seemingly better IMD/DR/intercept numbers.

Exactly.

: ... A filter that ... reduces the number
: of these really makes a difference. The ideal solution is a tracking
: filter--preferably one that doesn't add to the distortion problem.
: Very expensive (45 kilobuck) receivers can do this.

Or use a simple manual tunable preselector filter like the ones that nearly every amateur receiver had in the old tube days. The Drake TR-7 was Drake's first transceiver with wideband filters in the receiver. A data sheet showed IMD third-order intercept as a function of tone spacing for the TR-7 and the older tube-type TR-4. The TR-7 was better close in, but the TR-4 was much better beyond a few hundred kHz.

There's no technical reason manufacturers couldn't include a tunable filter in modern receivers. I guess modern hams are more comfortable with a computer-like interface than a (TM) Real Radio. :=(

:Looks like someone has severe finger trouble..... I most certainly did not
:originate any thing via the above gateway. Based on a number of posts in
:this group, the Chicago gateway needs to get its act together and stop
:regurgitating news items with inaccurate headers.

It's always been a problem with Fidonet. A new sysop doesn't set his
board up properly and duplicates flood the net; when there's an Internet
gateway, they appear here.
I tried emailing the original message header and the duplicate message
in its entirety to the postmaster at what I thought looked like the gateway
address, but it was returned.
Basically, the Fidonet people have to trace through the SEEN-BY and PATH
lines to figure out who routed it back to 115/119. Though it's been a long
time for me, it looks like the new node (calling itself 115/999 in the
tradition until it gets an official node number) sent it back to 115/119,
causing the problem.
115 is the Chicago area, and 999 won't be on the nodelists, so only the
feed to 999 will know who did it (I think).

>>operate!

Well, I hate to disagree with someone whose other arguments (deleted)
make sense, and who is not anti-CW, but I think the above is untrue.
Unless you tune with a very wide filter and don't want another signal
within 1 KHz, there is plenty of room in the CW bands. That is one
of their attractions. During a contest, I would agree - even with a
juicy call you may have to go 50-60 KHz up to find a clear spot, but
in non-contest times, stations are not close enough to prevent anyone
from calling CQ and starting a QSO without bothering others.

If the bands were indeed that crowded, why would you want to call CQ
anyway? There would be enough activity for you to choose people to
work without wasting energy and electricity calling CQ.

[842]
QCWA vs. ARRL

The Quarter Century Wireless Association may have responded to ARRL charges that it does not meet the qualifications to be named a club and military recreation call sign administrator. In its opposition filing the League had claimed that QCWA did not hold a 501C3 Internal Revenue Service rating, that the QCWA was organized only for pleasure and recreation and that QCWA did not have the requisite number of employees to administer the program. But in a letter to Fred Maia, W5YI, the Quarter Century Wireless Association Vice President, Lew Mc Coy, W1ICP, takes issues with the League's position. Mc Coy's letter states that the QCWA does hold a 501C3 and has held this rating for over fifteen years. He also indicates that the primary purpose of the QCWA is actually that of furthering the state of the Amateur service. He notes that the Association awards many scholarships every year and also brings many new hams into the service through its various chapters. Mc Coy then takes on the ARRL directly over the allegation that it does not have the staff needed to administer call sign assignment. Mc Coy says -- and we quote -- the QCWA does have more than one employee, but, for the record, is the ARRL hierarchy so ignorant to believe that the QCWA could not hire more people if needed.
It must be noted that this letter which appears to be a personal communication between Mc Coy and Maia that Maia chose to publish in his W5YI Report Newsletter. Therefore, its not certain if this is Lew Mc Coy talking as Lew Mc Coy or as the official voice of the QCWA.
If Mc Coy is talking officially, then it would appear that the Quarter Century Wireless Association is readying itself for a confrontation with the American Radio Relay League. Two other applicants -- the National Amateur Radio Association and the W5YI VEC have already indicated that they are in this fight to stay.

*****
LAMBDA vs. GREEN

Lambda Amateur Radio Club president Jim Kelly, KK3K says that 73 Magazine publisher Wayne Green, W2NSD is -- and we quote -- "incapable of distinguishing between just and proper legal activities and those that are frivolous" -- end quote.
Kelly's statement follows a series of scathing editorials

about him and Lambda by W2NSD after the group filed its discrimination complaint against the American Radio Relay League.
But Kelly is fighting back. In a press release, KK3K says that Wayne Green's most recently published reference to him -- and by extension to all Lambda members as being scum for having filed the discrimination complaint is -- and again we quote -- "indicative of the depths to which this unprincipled and unbalanced individual will go to gratify his ego" -- end quote.
The Lambda Amateur Radio Club is made up primarily of gays and lesbians. Kelly claims that the group filed its action to stop what Lambda views as discriminatory practices aimed at the group by the League. The dispute revolves around a decision by the ARRL to turn away a classified ad that Lambda felt should be published in QST Magazine. Soon after Lambda announced its legal action Green ordered the Lambda advertisement also be dropped from 73 Magazine. He also began taking pot shots at the group.
W2NSD is demanding that Lambda drop its legal action against the American Radio Rely League. He also says that the group must repay the ARRL all of the legal costs it has incurred before he will ever again permit a Lambda ad to run in 73.
But Kelly says that Lambda has no intention of backing away. He notes that the complaint remains pending before the Connecticut Commission on Human Rights and Opportunities. He says that he is confident that Lambda will achieve what it believes will be a just outcome, -- and again we quote -- "not withstanding the irrational ranting and raving of Wayne Green."
Nothing yet from Green camp or his 73 staff on the response by Kelly. Its also unknown if Lambda plans to extend its legal action to include 73 Magazine for also dropping the group's classified ad.

*****
NO DISCRIMINATION

The Federal Communications Commission has dismissed a complaint of racial bias in employment against WEAR-TV of Pensacola, Florida and renewed the ABC affiliate's license through January 1997.
The National Association for the Advancement of Colored People had filed the complaint. The stations president and general manager provided the FCC with documentation that the station has an equal employment opportunity program that meets or surpasses federal guidelines.
FCC officials noted that the Pensacola area's labor force is 14 percent black and cited company records showing the station's employment was 10 percent black in 1989, 9 percent in 1990 and 10 percent in 1991. Blacks held 8 percent of upper-level jobs in 1989, fractionally higher than the next two years.

*****
FCC PREEMPTS STATES ON HAM GEAR IN CARS

Two of the three major ham radio newsletters have finally gotten around to letting you know what Newsline reported back on September the third. Front page headlines on the latest issues of both the ARRL Letter and the W5YI Report are heralding the results of an League initiative that has lead the FCC into preempting state and local laws that limit the use of ham gear in cars and other vehicles.
For those of you who may have missed the original report here is a quick review of what has taken place. In essence, the FCC has told state and local government agencies that they cannot tell hams not to operate mobile or portable rigs because just because these radios have the potential of listening to frequencies outside of the amateur bands.
The laws attacked in FCC Private Radio Docket 91-36 were those that some states and municipalities have passed to prohibit the possession of transceivers if they are capable of receiving on certain frequencies other than the ones used by hams. When it filed for the declaratory ruling the League told the FCC just about every transceiver on the market allows for incidental reception of frequencies adjacent to amateur bands. The League also said that amateurs have special needs for out-of-band reception, a fact the marketplace long has recognized by offering transceivers to accommodate those needs.
The FCC agreed. It says that state and local laws that make possession of amateur transceivers in vehicles or elsewhere illegal merely because they can receive certain frequencies is defiantly preempted by federal law. The Commission says that such local and state laws are inconsistent with the federal laws that promote and facilitate the Amateur Radio service and are therefore illegal in themselves.
Several law enforcement lobby groups have been vocal in their opposition to any member of the general public, including radio amateurs having the ability to listen in on their transmissions, but none are expected to challenge this declaratory ruling.

*****
ABDUCTED HAM FOLLOW UP

Still no word on the whereabouts of thirteen year old Nathan Taylor, WZ1W. Nathan is the missing Gardner, Massachusetts teenager we reported on last week. His family says that the youngster was coerced into running off to Texas by a man with a known criminal record that he met on a computer bulletin board system. Nathan has not been seen since August 27th when he ran off and boarded a Texas bound bus, but his name has appeared in the log-ons of various computer bulletin boards. It is believed that he may be in the Memphis, Tennessee area, still trying to get to Houston or Dallas, Texas. His mother Phyllis Taylor says that she is ready to welcome Nathan back home.

"The first thing I'm going to do is give him a great big hug. That's the first thing and tell him that I love him very much and my husband does too. And we're glad to have him home. And then I'm going to say we're going to discuss why? We had no indication that he was going to do this. Any one that wishes to get in touch with us may call collect area code (508) 630-2896. I am trying to work to keep my mind busy. I'm home, I have an answering machine they can leave their name there. Or I'm home after 2:30 pm EST." Phyllis Taylor.
Phyllis Taylor says that she is very grateful for the help that was offered her family by the Amateur Radio community. With almost 700,000 hams looking for Nathan, the Taylors hope that it won't be long before they get a call telling them that their son is on his way home.
If you have any information on the whereabouts of Nathan Taylor, WZ1W, or if you spot him, please call the Taylor family at area code (508) 630-2896. Phyllis Taylor adds that you can call collect.

*****
MARATHON RUNNER

Icom America has teemed with Marathon runner Fred Doob, AA8FQ in a ham radio fund raising effort to benefit the Sloan Kettering Cancer Center in New York. Doob plans operate two meters as he runs in the November 14th New York City Marathon and for each contact AA8FQ makes, Icom will donate five dollars to Sloan Kettering.
According to Icom, Doob will be available for QSO's throughout the 26 mile race on seven of the big apple's most popular two meter repeaters and three simplex channels. Repeater frequencies include 146.88 in Staten Island, 146.73 and 147.36 in Manhattan and the simplex channels of 146.52, 146.58 and 147.51. Fred Doob says that he has a back-up to log all the QSO's made and a special commemorative QSL card is being created to mark the event. Doob adds that he will be easy to spot during the race. Just watch for the only runner with a hand-held on his waist and an Icom cap on his head.

*****
NEW MICROSATS

Amateur Radio has some new microsats in orbit. Itamsat, Posat and Kitsat-B were launched on September 25th from the European Space Agency facility in Korou, French Guiana. The birds were carried aloft on an ESA Arianne booster. Also placed into orbit by the Arianne launcher were the Spot 3, Stella, Healthsat and Eyesat A commercial and scientific birds. All six were placed into a circular orbit at 800 kilometers elevation with an inclination of 98.7 degrees. The amateur radio satellites are reported to be operating well. The launch of Itamsat marks the

entry of Italy into the ham radio satellite space race.

*****
EME TEST

All appears ready for some upcoming EME tests by The Toronto VHF Society. Using the call sign VE3ONT the Canadian hams will use the 150 foot diameter radio telescope at Algonquin Provincial Park during this year's ARRL International EME Competition. VE3ONT will be active the full weekend of each contest period. The dates are October 9th and 10th and November 6 and 7. As users of a non-amateur antenna VE3ONT says it will not be in competition with other stations. Their intention is to provide an initial EME contact for as many stations as possible. VE3ONT will also maintain High Frequency liaison on 14.345 during daylight hours and on 3.818 at night.

*****
AMSAT-SA ELECTION

On the international scene, word that Hans van de Groenendaal ZS6AKV has been re-elected as the President of Southern Africa AMSAT at the society's Annual general meeting held in Johannesburg on September 11. The meeting was held after the 14th annual Space Communications Conference. The latter event was attended by 60 delegates.

*****
DX

In DX, ZS9A says that a tentative date of February 28, 1994 has been announced for Namibia's takeover of both Walvis Bay and the Penguin Islands. The announcement pointed out that many details remain to be worked out and that this is only a target date.

*****
CABLE PRANK

Most of you are well aware that those cable TV broadcasts of city council meetings can get pretty boring. But officials in Beloit, Wisconsin, don't see anything funny in a student's effort to liven up the proceedings.
The director of the public access channel says a college student working on the broadcast typed some editorial comments on the screen during a televised council proceeding. When a man complained to the assemblage about squirrels and chipmunks to the council, those tuned in saw a font below the picture that said -- quote --"This is weird."
Officials say the student typed other messages but declined to say what they were. The cable company says that the student font operator has since been fired. One council member calls the cable incident insulting, but viewers in the area seemed to

disagree.

|
|
|The firmware is all copyrighted, tampering with it is a crime!
|
|Bruce, WB4YUC
|
|

How does copyright law provide this protection? Does it do the same for a book? Is it illegal to write in a copyrighted book, assuming the book was purchased legally? Does the current copyright law provide special protection for firmware this way?

Can someone who buys the radio write their own rom and stick it in in place of the copyrighted rom? -- it certainly seems this would not violate the copyright even if modifying the original rom would.

(I mean now, you can't copyright the whole radio can you? That is what pattends are for. And you can't copyright "look and feel" according to recent court decisions.)

Lotus might be able to sue if others sell unlicensed copies of their software, but they can't prevent third party companies from selling software with the same look and feel to be used in it's place.

(In the case where tampering with cell phone would give the user access to unpaid for services I can see where this would be a crime--not so much as a copyright violation but of theft. It could also threaten public saftey in certain circumstances. So is this what Motorola is talking about? Why are they so vague in the add?)

Hi Jim,

I have been using an Outbacker (short version) for nearly 2 years. I have mounted it on side of the trunk lid. I have been satisfied, for the most part, as to performance. I use it on all bands (except 75) both ssb and cw. I found it absolutely necessary to use a tuner and bought the MFJ mobile tuner (I don't remember the model number). The major drawback with the Outbacker is the necessity of getting out of the vehicle to change bands. In the winter it can be a real problem because of the stiffness of the wire tap that wraps around the antenna and needs to be moved up or down in order to change bands. Another thing that required contacting the guy in Chattanooga who sold it to me - in order to operate on the low end of the bands (cw) I needed a longer end segment that you can adjust. He sent me an EXTRA long one (free, by the way), and I had to shorten it (permanently, as in "saw it off") but it works well now. I made marks on it so that I could quickly set it to the desired "low end" or "high end" portions of the band in question. Let me know if you want to talk more about this.

Oh, by the way, I found W6AAQ's book of absolutely no help whatsoever. Nothing in that book relates to the solid-state radios so prevalent today. It's basically a history book.

>>"4 YEAR OLD PASSES EXTRA!"
>>
>>Can you say "rote memorization"? Good, I knew you could.

I'm sure what this means. Learning Morse code is rote memorization
in the same way as counting from 1 to 10, learning the order of
letters in the alphabet, or where the keys are on the typewriter.
I've found all of these to be useful to know, and worth some effort
to learn.

Are there "typewriter-challenged" people, just as there are a few
"Morris-challenged" ones? Is learning typing an old-fashioned
skill, now taken over by some other technique that we should be
using? Does the Coast Guard still use keyboards?

Did anyone else find Motorolas advertisement on page 161 of
QST a bit offensive. Maybe I am hypercritical of them, as
I view the ECPA as a direct result of motorolas money
and lobbying power, but the not-so-indirect warning of:

TAMPERING WITH MOTOROLAS COMMUNICATIONS TECHNOLOGY IS
NOTHING SHORT OF A CRIME!

seems awfully damn threatening to me. Especially when
the term "tampering" is not defined. . . other than
by terms like "High-Tech piracy" .. which are meaningless.

"Tampering" with "technology" is certainly NOT a crime!

BID: $ANS-279.01

WD4FAB NEEDS A FEW GOOD MACHINIST FOR PHASE-3D

Dick Jansson (WD4FAB), AMSAT VP Engineering, has asked the AMSAT News Service (ANS) to post an additional request for machinist help on the Phase-3D project. As many of you know, several machinist volunteers have already stepped forward in the past to assist with the project, and many have produced some very high quality materials.

Right now, however, Dick has an additional and urgent need for a machinist volunteer with access to a numerically controlled (NC) lathe and who can also produce modest quantities of small aluminium inserts for honeycomb panels. These inserts will be used in manufacturing Phase-3D's solar arrays.

Anyone with these capabilities and who would like to volunteer should contact Dick Jansson directly via INTERNET at "wd4fab@amsat.org" or you can fax him at (407) 644-9872.

SaTReC & KAIST Announces the Launch of KITSAT-OSCAR-25 (KO-25)

The Satellite Technology Research Center(SaTReC) at the Korean Advanced Institute of Space Tecnology (KAIST), announced the successful launch and activation of new OSCAR. KITSAT-2 was built at KAIST and is named as KITSAT-OSCAR-25 (KO-25) following the suggestions from AMSAT group. KO-25 was launched by ARIANE launcher at 01:45 UTC on 26-SEP-93 from Kourou Space Center of French Guyana. KO-25 was inserted into orbit after 23 minutes. KO-25 was activated 12:03 UTC on the same day from the Central Command

Groundstation at SaTReC at KAIST. KO-25 carries five payloads onboard such as CCD Earth Imager, Store-and-Forward mailer, Digital Signal Processing Experiment for High Speed Modem tests, Infra-Red Sensor Experiment (IREX), Low energy electron detector (LEED) and it also has new computer system called KASCOM (KAIST Satellite Computer) for small satellite.

SaTReC sincerely express gratitude on the help that AMSAT members have given to us during our initial operation. Special thanks to W3XO, WD0E, Harold Price, G0/K8KA, Eric A. Cottrell, Steve Greene, DB2OS, N3FKV, Ron Parise, W3IWI and whom were active on the INTERNET during the period.

SaTReC congratulates the AMRAD and ITAMSAT teams, and the University of Surrey, on the launch and activation of their satellites. For further information about SaTReC and the KO-25 payloads, please contact SaTReC via:

Mode-B : MA 0 to MA 90 !
Mode-BS : MA 90 to MA 120 !
Mode-S : MA 120 to MA 145 !<- S transponder; B trsp. is OFF
Mode-S : MA 145 to MA 150 !<- S beacon only
Mode-BS : MA 150 to MA 180 ! Blon/Blat 180/0
Mode-B : MA 180 to MA 256 !
Omnis : MA 230 to MA 40 ! Move to attitude 210/0, Oct 25
Continuous up-to-date information about AO-13 operations is always available on the beacons at 145.812 MHz and 2400.646 MHz in CW, RTTY and 400 bps PSK. Also, these bulletins are also posted to INTERNET, ANS bulletins, Packet, PACSATs, etc., and can also be found in many international newsletters. [G3RUH/DB2OS/VK5AGR]

KO-25: KO-25 has deployed its gravity gradient boom and is operating nominally. On 4-OCT-93 2:10 UTC Attitude Determination and Control System (ADCS) engineers concluded that the spinning rate of KO-25 had been reduced enough and they started preparation operation for boom deployment. At 3:56 UTC the same day, boom was successfully deployed which was proven by tel-emetry. After the deployment, KO-25 was confirmed to have an attitude which the bottom of the spacecraft looking down the Earth. After some upgrading work on command groundstation, receiving quality has improved and we are now having excellent contact to our bird. No fading is experienced since then. While ADCS team concentrates on their work, payload teams are preparing for their first test procedures. The V59-H is still showing best matching than any others so that we continue to use. [Hyngshin Kim, hskim@satrec.kaist.ac.kr]

POSAT-1: Attitude control operations and camera checkout continue on PoSAT-1. This evening, Monday, 4-OCT-93, a modified gravity-gradient-lock program was loaded to the 80C186 OBC. It is hoped that this modified algorithm will remove the preference toward upside down lock which has thus far effected the ADCS operations. Previously, the decision when to initiate the gravity capture sequence has been taken manually from the control station. The present experiments are aimed at commissioning a fully-automatic software package. If this effort is not successful in the next few days, the previous, manual operation will be executed. [G0/K8KA]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

WA5ZIB Presents A New AO-13 ZRO Test Schedule: All Are Invited

The ZRO tests of September 26th and October 2nd went very well. Noise levels both here and in Europe were very low and several stations reported hearing and copying the code groups at new levels. New "Z9 Club" entries are expected based on the conversations with test participants. One test remains this season on Monday, 18-OCT-93 at 04:30 UTC. For those in North America this is late on Sunday night, the 17th. The ZRO tests are held on 145.840 MHz at 10 words-per-minute. The signal strength at level "zero" is set to match the general telemetry beacon, while level "9" is 27 dB lower. Level "A" at 30 dB down is now being sent as a regular part of each run. All listener reports with date of test and numbers copied should be sent to Andy MacAllister (WA5ZIB), AMSAT V.P. of User Operations, 14714 Knights Way Drive, Houston, TX 77083. A report will be returned verifying the level of accurate reception.

I don't think so either. It may be a violation of the license agreement
though and they could sue you for that. It is not piracy. I am not sure if
the license agreement could be enforced. In some states so called shrink
wrap agreements are valid and in some they are not.

: }of firmware within a Motorola radio is considered "software
: }piracy".
: }
: }If you build additional features into the radio, and attempt
: }to circumvent them through software control, and someone
: }discovers this by reverse-engineering and publishes the
: }"fixes", I again fail to see how this is considered
: }"software piracy".
: }
: }Perhaps you'd like to explain in a little more detail
: }the reasoning?

: The firmware is all copyrighted, tampering with it is a crime!

I am not terribly familiar with the copyright laws but I am fairly sure
that the altering of coyrighted property is not prohibited. to suggest so
would be to say that I couldn't draw a moustache on the Cindi Crawford
poster I purchsed. Maybe I couldn't write in the borders of my copy of a
copyrighted book. These arguments are the logical extension of what you
suggest. If that is the case please let me know. It is possible that FCC
certification relies upon using the radio only with Moto. mods and hacks
to the firmware would invalidate the certification but that is not an
issue with amateurs.

3195. Speech Inversion Mod Needed

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-07 01:08:02 UTC
From: horak@convex.com
Message-ID: <horak.749956082@convex.convex.com>
Source record: 275367

I would like to build or buy a device that will un-invert speech inversion. I have had responses before that said "Call Ramsey", or something to that effect. I have looked through about a dozen or so Pop-Comm and MT issues without finding any useful information or distributors. I really would like some concrete information on adapting a speech inversion mod to my Pro2006 so if anyone out there has done this and can provide REAL information, I would be most appreciative.

David

: I've found all of these to be useful to know, and worth some effort
: to learn.

Yes, but learning 5WPM Morse is *supposed* to test rote
memorization. The intent of the written exam is to test understanding
of basic communications technology concepts. Unfortunately, the
question pools are published, and since memorization is easier than
making the effort to comprehend (ask any college student), people
use that route.

This is only true if you use a radio shack battery.

Most OEM packs do not have any regulation.

Geoff.

How do these new "Renewal" rechargable alkalines stack up both against regular alkalines and NiCds? I'm thinking mostly along the lines of using these batts for HT's. Anybody tried 'em yet?

73,

Yeah. You don't live in the Delta Division 'cause if you did you'd *know*
who the 2 contenders were ...

Much as I hate too see piggys at the trough too long, I am voting for the
incumbent here.

(Our club formally asked our SM about a student discount on League
membership. The SM discussed it with the Division Dir. and CC'd it to me.
Less than a year later, the youth discount is bumped from 17 to 21, taking
in most of our members (not me - missed 21 by 9 years). Was it because of
our request?)

I saw the Rayovac rechargeables in a Walmart store in
Wisconsin. Rayovac is a Wisconsin company. I have not seen any of
these in California.

They had an 800 number on the package. So I gave them a call
and spoke to one of their enginers on their dime.

I threw away my notes and his name and number as part of my
paperwork reduction prgramme. But they are sending me data in the
mail.

Here is what I recall. Terrific self discharge numbers. this
means the batteries can be left around charged for years and will work
when plugged into something. With NiCads they can lose half their
charge in a month or less. Metal Hydroxide batteries are worse. The
Amp-hour ratings seemed OK, but the internal resistance is higher -
this means you cant pull the current out of them that you can pull out
of a NiCad. This could be promoted as a safety feature. A AA will feed
about 300 Ma, A D cell (U2 UK) will pull about an Amp.

They can be recharged about 25 times. They need a fancy
charging circuit - Rayovac sells a charger, but hams and manufacturers
will no doubt wish to build their own.

Seemed to me that they would be ideal for emergency equipt -
because of the low discharge rate and ability to recharge. So for
radio recievers, flashlights, toys etc they would be ideal. They will
suck in high powered walki-talkies, but will be fine for low power use
especially as they can be charged a year before they are needed.

Sorry I lost my price paperwork so can't provide a cost
comparison with regular Alkalines. I was told that a rechargeable
alkaline has the same shelf and discharge characteristics as a regular
alkaline - so yes, they will work in your energizer bunny.

Michael, What's 2 times 8 ?

I suspect you didn't work it out, but simply retrieved it from memory, where it was placed by rote memorisation early in your school career. With your title, did you also memorise various prayers this way? Did this spoil its accuracy or usefulness? Would God ignore that prayer?

Learning by rote is not necessarily evil, and does have its uses. It puts a database in your head, perhaps before you have even learned how to use it (database not head :-)

Storing it in the form: "if question 764.2635 is pulled from the pool, the answer is B" is clearly valueless, after the exam. However, a rote memoriser may have stored "If a question asks what do you do to prevent TV interference from harmonics, the answer is add a lowpass filter" Then it is still possible that the candidate has no idea at all what harmonics and filters are, but would get the mark for that question. At least this way the candidate has some information that becomes useful as they learn to interpret it.

I don't mind multiple choice exams, or pool questions if the pool is big enough, and the questions and exams carefully designed. It would seem sensible, though to scramble the question numbers and answer codes when an exam is assembled, to get people to learn the words, not the codes. (OOPS, oh Bugger! I wrote "learn code" AArgh, sorry, not THAT code!)

Cheers
David GM4ZNX

3205. rec.radio.amateur.misc Frequently Asked Questions (Part 1 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-07 09:43:04 UTC

Posted-By: auto-faq 2.4
Archive-name: radio/ham-radio/faq/part1
Revision: 3.12 09/07/93 15:35:03

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.announce.newusers
newsgroup before posting any articles. If you are an experienced user, please
help by refraining from answering frequently-asked questions on the newsgroup
if they are already answered by the FAQ articles. Instead, send e-mail to the
user who asked the question. (It will be helpful if you include the part of
the FAQ that answers their question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

Table of Contents
-----------------
Dates indicate last modification.

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (6/93)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)

** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (11/92)
* The rec.radio.* newsgroups (6/93)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (new 9/93)
* The Internet File Transfer Protocol (FTP) (9/93)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (11/92)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (9/93)
* Lists of radio modifications and extensions (11/92)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (4/92)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)

** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ed Hare KA1CV ehare@arrl.org (Newington, CT, USA)
Jack GF Hill W4PPT root@jackatak.raider.net(Brentwood, TN, USA)
Ian Kluft KD6EUI ikluft@uts.amdahl.com (Santa Clara, CA, USA)
Michael Larish KD6CTZ nomad@ecst.csuchico.edu (Chico, CA, USA)
Paul Schleck KD3FU pschleck@unomaha.edu (Omaha, NE, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Steve Watt KD6GGD steve@wattres.sj.ca.us (San Jose, CA, USA)
Rosalie White WA1STO rwhite@arrl.org (Newington, CT, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin, TX, USA)

* Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana

established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.
* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civ-

ilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail

from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).

* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any kind over ham radio. Interference to other hams or services, as well as obscene, profane or indecent language is not tolerated and is illegal. Music and broadcasting are not allowed on ham radio. Some personal conversations may not be appropriate to Amateur Radio. Do you really want the whole world to hear about Aunt Mabel's hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers) in your local area. Look around and ask local hams. Search out local radio clubs. As well, some people have volunteered to be an Elmer over the Usenet. A list of UseNet Elmers and their e-mail addresses is posted to the newsgroup monthly. If anyone wants to be an Elmer, send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a look around the FTP archives and e-mail servers listed in Part 2. There's so much out there on UseNet, you'll find plenty of things you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a thrill to build your own transmitter and put it on the air. However, building your own receiver can be quite complicated; if you don't have electronics experience, you may want to buy a receiver instead. Most homebrew transmitters are QRP (transmit very low power). That's fine for an experienced ham with a very good antenna, but a Novice ham will just get frustrated. Your first rig, therefore should NOT be a home-brew.

Antennas can be much simpler projects than the transceiver, though some types are also quite involved. Most hams build their own antennas for base station use and buy antennas for mobile (car) use. Most beginner ham books describe how to build different types of antennas. Order of difficulty, from easiest to more difficult, for some common

antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books from many sources, including ARRL and several Hams, discuss antennas in depth.

When building or even understanding antennas, it is good to know the relationship between the antenna element length and the frequency or wavelength it is designed for. An antenna performs best at multiples of 1/4 of that wavelength, though 5/8 wave also has beneficial qualities. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

3206. rec.radio.amateur.misc Frequently Asked Questions (Part 2 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-07 09:43:07 UTC
From: ikluft@uts.amdahl.com
Message-ID: <ham-radio-faq-2-749986982@uts.amdahl.com>

Revision: 3.15 09/05/93 05:14:16

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (11/92)
* The rec.radio.* newsgroups (6/93)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (new 9/93)
* The Internet File Transfer Protocol (FTP) (9/93)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (11/92)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (9/93)
* Lists of radio modifications and extensions (11/92)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (4/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media
including UseNet, electronic mail, the Internet, dialup bulletin board
systems (BBS) and others. Various electronic information sources are
```

summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* The rec.radio.* newsgroups
The primary distribution mechanism for this FAQ is UseNet. There are several newsgroups dealing with Amateur Radio and other aspects of radio. The full list is as follows:

rec.radio.amateur.misc (*) Ham Radio - misc/general topics
rec.radio.amateur.antenna Ham Radio - antenna construction/theory
rec.radio.amateur.equipment Ham Radio - manufactured equipment/mods
rec.radio.amateur.digital.misc Ham Radio - digital radio modes: packet/AMTOR/RTTY/etc (formerly r.r.a.packet)
rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*). It is also cross-posted to rec.answers (the archive for FAQs in the rec.* newsgroups) and to news.answers (UseNet's general repository for FAQs.) These should be the first places to look for new current copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting Amateur Radio in the USA. They have established an automated file server which responds to information requests via electronic mail.

To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 386 PC at home with
over 40 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at ham-server@grafex.cupertino.ca.us. This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server seems to have more emphasis
on MS-DOS programs and binary files though there are many plain-text
articles as well.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)
NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Tom Czarnik coordinates a fairly definitive list of anonymous FTP
sites, their IP numbers, time zones, general contents, and access
policies which he posts to the comp.misc, comp.sources.wanted,
alt.sources.wanted, and news.answers newsgroups. It is itself
available via anonymous FTP (how about that?? :-) from (among other
places) rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has

installed the "archie" program on your machine and use it. Archie may also be accessed by telnetting to one of the following sites (use the one closest to you):

Finland/Europe: archie.funet.fi
Canada: archie.mcgill.ca
Australia/New Zealand: archie.au
Israel: cs.huji.ac.il
UK/Ireland: raquel.doc.ic.ac.uk
USA (Maryland): archie.sura.net
USA (Nebraska): archie.unl.edu
USA (New York): archie.ans.net
USA (New Jersey): archie.rutgers.edu

Login is archie. Type "help" at the prompt for a description of all server commands.

For those without telnet capability, the database may be accessed non-interactively via mail server. Send E-mail with the word "help" to archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are extremely powerful tools for finding out "what's out there" at various FTP sites around the world. *PLEASE* exhaust their capabilities before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu
(submissions to this ftp site should be made to bowen@cs.buffalo.edu) - contains many ham radio files, including the FAQs, Elmer list, SWL and scanner info, Packet FAQ, examination opportunities, information on various regulations, information on commercial radios (i.e. GE or Motorola), SSTV (slow-scan TV), HTs (handheld transceivers) and the KA2UGQ worldwide BBS list. See ~pub/ham-radio. This FAQ is updated monthly here.
grivel.une.edu.au
This site contains a mirror of ftp.cs.buffalo.edu's Ham Radio archives. It provides a shorter distance if you're in Australia or if Australia is a shorter net.path for you than New York.
nic.funet.fi
This is one of the largest FTP sites in Europe and maybe the most popular. There are many directories of Ham-related files in /pub/ham. /pub/ham/info contains a mirror of Buffalo. Other topics available here include amiga, antenna, HF, packet, satellite, scanners, program sources, VHF and others.
ftp.uu.net
A large FTP site in the USA - UUNET contains sources and binaries for many different types of computers.

wsmr-simtel20.army.mil
Keith Peterson, W8SDZ, has apparently returned as the
maintainer of this huge repository of ham-radio (software and
modifications), MS-DOS, and CP/M files. To find out how
to submit files to this archive, please read his informational
posts to the comp.binaries.ibm.pc.archives newsgroup. If you
cannot directly FTP from wsmr-simtel20, there is a mail server
that can help. Send mail with the text "help" to
listserv@vm.ecs.rpi.edu.
wuarchive.wustl.edu
A "mirror" of the files available on Simtel20, plus a *LOT*
more. A more user-friendly Unix environment (plus a faster
net connection) makes this site preferred over Simtel20.
If you are on a Unix box locally, see if your system
administrator will "NFS-mount" these files for faster/easier
access.
ucsd.edu
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
uxc.cso.uiuc.edu
cd pub/ham-radio - This site contains the HyperCard Hamstacks
written by Diana Carlson as well as ASCII readable ham radio
question pools.
ftp.apple.com
cd pub/ham-radio - Ham software and information, especially
Macintosh software
wolfen.cc.uow.edu.au
athene.uni-paderborn.de
ham radio files and software for the Amiga computer system
rtfm.mit.edu
cd pub/usenet/news.answers - all participating FAQs and
periodic informational postings are archived here, including
those from the rec.radio.* newsgroups which can be found in
pub/usenet/news.answers/radio. Participating FAQs are
automatically archived here when they are posted on UseNet.
ftp.amdahl.com
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here
is that Netnews is far more prevalent than direct Internet hookups,
accurate name servers, smart mailers and routers, and of course,
telnet and FTP client services. What this means is that your trouble
may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line
and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If
this is the case, then you have no direct connection to the Internet
and thus cannot use real-time interactive services like FTP and
telnet.
* If you are at a college or university, your host (ie, the computer
you are logged onto) may be on the Bitnet network, which has an
email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host
have telnet and/or FTP client programs? (ie, if you type "ftp" or
"telnet" at your command prompt, do you get anything?) Many hosts,
particularly IBM mainframes not running Unix, do not support these
services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to
misconfigured connections and inaccurate host tables/name servers
(*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar
error, try telnetting via the IP number, a set of four 1-3-digit
numbers separated by periods (eg, 198.137.220.1). The exact IP
number for the site can be obtained via the nslookup utility, if
your computer supports it. (The FAQ does not print IP addresses any
more because they change so often.) Your system may not recognize
the "fully-qualified domain name" (like callsign.cs.buffalo.edu),
but it should ALWAYS recognize an IP number if their network is
reachable from yours.
* If you get "network unreachable" check with some more knowledgeable
users if your site is actually connected to the Internet. If it is,
a link in the network may be temporarily disconnected for maintenance
(or by accident.)
* In the case of telnetting to a non-default port (as in the case
with the callbook servers), if telnet <host> <port#> doesn't work,
but you can telnet to the default login port (ie, no qualifiers),
then the manner at which the port qualifier is entered may be
system dependent.
* Syntax for telnetting from different operating systems differ.
Some common command syntaxes are: (angle brackets are for
readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.
However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files

foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,
CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect uxc.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/Tech.v3.3.sit.hqx.Z

quit

A note on the use of FTP mailservers: If you want to use FTP mailservers, like FTPMAIL, please be considerate of any systems that your mail must pass through. The quickest way to find yourself cut off from the world is to make the admins of sites that pass your mail pass 60Mb of X11 graphics system source. If you need large amounts of information from a mailserver, contact your admin for help -- it may already be available, or he may know a better way to get it.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu
In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address (i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages) you can provide your return address between the "subscribe" and the name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe or unsubscribe from *any* mail list to the list itself. Always use the REQUEST address. Otherwise you'll end up broadcasting your request to everyone on the list and getting lots of people angry at you. (Seriously - this is a completely avoidable mistake and it does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word "subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to the mail list addresses at ucsd.edu. Since rec.radio.info is a moderated newsgroup, requests to post to it may be sent to Radio-Info but they will be mailed to the moderator, rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu
under subdirectory mailarchives/{mail-list-name}. However, Radio-Info
is not archived at UCSD because almost everything is either on one of
the other lists or in the news.answers archives at rtfm.mit.edu.

To subscribe to rec.radio.shortwave, send email to
listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP
Login is bbs, no password. This BBS is also available via UUCP,
login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings
are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of
other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder.
The number is 203-666-0578. More information can be obtained from
the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on
the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB
HAM-server. Also see many of the FTP sites listed earlier in this
section. There is now way to keep a list like this anywhere near
up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
If you are at an Internet site you can connect using telnet to one
of the two primary servers:

callsign.cs.buffalo.edu
ham.njit.edu

There is also a general geographical name server at:

martini.eecs.umich.edu

The callbook servers sit on port number 2000 and the geographical
name server sits on port 3000. These are different port numbers
than what telnet usually defaults to. So if you just telnet to these
machines, you will get a login prompt instead of the server. How you
tell your telnet program to connect to port 2000 or 3000 instead of
the default port is operating system dependent but it is usually done
with a line like

telnet callsign.cs.Buffalo.EDU 2000

If this doesn't work, check the telnet/FTP troubleshooting hints
above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd
quit

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns, separated by spaces. For Canadian calls, use the callserver at REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an OS interface to the MBL packet BBS using the Buckmaster CD-ROM callsign database.

The REQQTH address is for the AX.25 radio-linked amateur packet network, *NOT* the Internet. If you attempt to send Internet mail to this address, and use the old .NA suffix instead of the new .NOAM suffix, it will get routed to Nimibia (Internet suffix .na) which is currently paying a lot of money for misdirected ham mail. Help maintain a positive example for amateur radio and please do not attempt this!

The FCC "call sign hotline" at 717-337-1212 is available for those who wish to listen to the call signs allocated in each group for each

district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA.
Since the latest changes to it, there are no known FTP sites with
a current copy.

An ASCII copy of the question pools are available by ftp from
the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
Some mods can be found on wsmr-simtel20.army.mil or
the Simtel20 mirror directories on wuarchive.wustl.edu.

There is a new server at pcserver@novell.business.uwo.ca. Some
examples of main body email requests are as follows:
HELP
SENDME RADIO MODS
SENDME TH215 MODS
SENDME ALLBAND MODS

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is sometimes a frequent question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are
available from the ARRL e-mail file server (see above). They want
direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones

(this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655. Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815, (800) 365-SUBS - lots of special interest columns, like QRP, ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 - up-to-date information on Amateur Radio happenings, including VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In general, you send a bundle of foreign (not States!) QSL cards to the outgoing bureau in Newington, Connecticut, along with a label off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area. Addresses for QSL bureaus are listed in QST and on the ARRL e-mail server (see below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT". See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However, rec.aviation.misc is appropriate for CAP aviation discussions and for CAP radio information, these rec.radio.amateur.* groups are available. CAP-related files are also stored on the FTP site sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK,
10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter band. It was first conceived when propagation was poor on 10 meters, as a method to get more hams to use 10 meters. The past few years have been great for 10 meters worldwide. However, "the bands are closing down" again, and 10 meters will once again be limited more for local communications, except for sporadic band openings, until the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call sign, operator's name and location. Send the list to your numeric call sign or DX area manager (as shown below), with $5.00 U.S. new membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N3FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent required under age 17), be a US citizen or resident alien, possess a valid Amateur Radio license, possess a station capable of operating on MARS HF frequencies, and be able to operate the minimum amount of time for each quarter (12 hours for Army and Air Force; 18 hours for Navy-Marines). Novices must upgrade to Technician within 6 months, else be dropped from MARS. No-Code Techs can apply, provided they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR

203 W. Losey St. Room 1020
Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF
Ft. Huachuca, AZ 85613-5000
800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it thru 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century

Wireless Assn maintains a collection of callbooks going back to "the beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more often, they are announced by local radio bulletin boards. The local packet BBS will most likely have a monthly updated schedule for VE sessions. ARRL or W5YI can generally be called and asked for

local VE sessions as well. Don't forget that you will need the following when you go in for an upgrade: a copy of your current Amateur license; your original Amateur license; any CSCEs (duplicate not required), if applicable and less than a year old; a picture ID, preferably a driver's license, passport or visa; and the VE test fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a listing of VE exams indexed by state (and some overseas sites, usually at embassies and military bases) to the net every 6 weeks or so. The same list can be obtained from the ARRL e-mail server under the file EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There are other smaller VECs around the USA. ARRL includes their schedules when the info is available. The other VECs phone numbers are listed with the ARRL info so you may wish to give them a call to check their schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above, substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available because of any of several reasons. Either there are copyright restrictions, royalty fees, or the source just may not have done the work. Also, not everyone that has information has reliable UseNet access.

In one example of someone's effort to bridge the information gap, there is a new repeater-mapping project which can automatically accept entries via e-mail. If you can get enough details about a repeater for a complete listing, you may want to help by submitting an entry. For more information, use the following e-mail addresses:

repeaters@wattres.sj.ca.us
Just send a message with only the word "help" in the message body. The project's software will reply with instructions.
steve@wattres.sj.ca.us
For other questions (Steve Watt KD6GGD)

As soon as the list is big enough to be useful, the project will make it available electronically. That will mean one less "why isn't it available electronically" question for the net.

3207. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 3)

Newsgroup: rec.radio.amateur.misc

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
```

Required are 5 wpm Morse code test and 30-question Novice test.
Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse code test.
General - has all Technician privileges, plus larger access to more HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15, 12, and 10 meter bands. A General class amateur can give Novice tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question General test.
Advanced - has all General privileges, plus wider band access on 80, 40, 20, and 15 meter bands. An Advanced class amateur can also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and 50-question Advanced test. The Advanced test is the most difficult of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General, Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code" Technicians realize they can add more privileges to their license if they learn Morse Code. The following list of suggestions should be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character plateau at 10 WPM by listening to the fast Farnsworth-paced "beat" of each letter and the "beat" of common words. (See the question on Morse code speed for more information on Farnsworth pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test may be in either format. (If you only practice one, you may fumble on the other.)
* Most of all, don't give up! Recognize when you reach plateaus and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed. Each dit counts for one count, each dash counts for three counts, intra-character spacing is one count, inter-character spacing is three counts and inter-word spacing is seven counts, so the word PARIS is exactly 50 counts:

PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and

does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife
YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a

reference to the wavelength of a common Amateur frequency
band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to hear. It's used as a "PL Tone." PL is "Private Line", a trademark of Motorola for their implementation of CTCSS (Continuous Tone Coded Squelch System). Basically, the transmitter sends the signal with the Sub-Audible tone and the receiver only opens when it hears signals with that tone. Signals without the proper tone are ignored. This is useful for "closed" repeaters, or for repeaters on the same frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS probably means Dual Tone Squelch System and refers to the feature of providing a predefined sequence of Touch Tone digits to open the repeater for transmit. DTSS is an alternate method from CTCSS, which provides a way to use a "closed" repeater even if your radio doesn't do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to your country. See the country-specific newsgroups in "the rec.radio.* newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get a license in your country. See also the ARRL e-mail server. (Details are in Part 2.)

If you know of any location where this information is available electronically, whether by an e-mail server, anonymous FTP, or a contact person, please mail it to us so we can include it here. Send it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)?
Editor's note (11/92): the regulations affecting this question are being changed. Contact your local Volunteer Examiner (VE) and ask about a VE 60-day pass. More details will be included in future revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020, Gettysburg, PA 17326. They will then send you a reciprocal permit for alien amateur licensee (FCC Form 610-AL). You must be a citizen of a country with which the United States has arrangements to grant reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines apply:
* A reciprocal license is required in all foreign countries (that have a reciprocal operating agreement with the US), except Canada, where the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them which country you are going to visit and they will send you the info and an application form. Foreign hams can likewise request information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur license (ie, notarized copy), and fee if applicable (use a bank draft of a bank that does business in that country) to the appropriate licensing administration of the foreign country. Processing may take 30 to 90 days.
* If less than one month, you could try sending the application and pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment into their country without a license or permit. If you applied, but haven't received the permit yet, show the copy and your FCC license to the customs officer, however, the equipment may still be held at customs until your departure.
* Be sure to use only those frequencies covered by your FCC license which are also used in the foreign country, unless otherwise authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many books offer advice for the growing group of hams that cannot put up antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up something as long as it "is invisible" or "doesn't disturb your neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief via PRB-1. Meet with the local government and seek an informal compromise. It is possible to win in court...but it's expensive and time consuming.
* If you are restricted by "covenants" attached to the deed of your home, your options are severely limited. Covenants are considered to be private, voluntary contracts between individuals and are outside of the intended application of PRB-1. In many cases, you can petition the Homeowner's Association for an exception. Sometimes you can win in court on the basis that other violations of the covenants by others without action taken constitutes abandonment of the agreement.

* For further information, contact the General Consel's office of the ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a complete list. There are also books on the subject available from ARRL.
* If cable TV is an underground feed, look for central distribution box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is disconnected and you use rabbit ears instead. It could be the cable company's problem!
* Calling the cable company may get results, since they are also responsible for RF leakage from their equipment. However, they are very often obstinate. Good luck! Try some or all of these suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency, and characteristics.
2. Bring it to the cable company's attention in writing, preferably addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving the problem. Try to work it out with someone technically knowledgeable.
4. Do mention your "licensed radio system", but try not to be too specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various aspects of electromagnetic interference. The filenames start with "EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI), EMI-AUDIO (interference to audio devices), etc.

** Did you know that you can get college credit for being a ham?
It's true! You can receive up to 14 credits in electronics and engineering thru placement tests for CLEP (College Level Entrance Placement) exams and DANTES (Defense Activity for Non-Traditional Educational Support) exams if you have an Advanced or Extra class Amateur license. For more information, ask your campus education office or (for DANTES) your military education office.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860
W6VIO 224.04 21.280 14.282 7.165
K6MF 145.585 7.165 3.840

W5RRR 146.64 28.495 21.350 14.280 7.227 3.850
W6FXN (temporarily out of service - looking for new frequency)
KA9SZX 146.88 426.25
K4GCC 146.94
WA4VME 145.17
W6TRW 145.32

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
W5RRR - NASA Johnson Space Center, Houston, TX
W6FXN - Los Angeles, CA
KA9SZX - Champaign-Urbana, IL
K4GCC - Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)
W6TRW - TRW ARC, Redondo Beach, CA (shuttle audio may be overridden
by repeater usage)

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you

check the box to change your callsign, YOU WILL GET A NEW CALLSIGN, even if all you wanted was to supply a new address; if you want to keep your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur

Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q, Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb, NY 14469 - sponsors the Wireless Museum

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112 (10504-524-2343)

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters and 70 centimeters are most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.digital.misc newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on the ARRL e-mail server or the directory /hamradio/packet on the KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's Handbook. Ham Radio stores in your area may either have it or be able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW

and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

3208. forwarded msg re: MOTOROLA

3209. Re: HTs Airlines and Morris

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-07 11:57:00 UTC
From: dls@genrad.com
Message-ID: <29106cINN613@sweetpea.genrad.com>
Source record: 275388

In article <749920487snx@skyld.tele.com> jangus@skyld.tele.com (Jeffrey D. Angus) writes:
>At the beginning of the flight, the Captain came on the intercom and announced
>that using certain types of electronic gear was prohibited on the airline and
>that said prohibition was due to FAA regulations.
>
>Note: During the flight, the HT stayed inside the carry-on bag where it was
>packed. I occupied myself reading the escape map, catalogs and barf bag notes.
>
>At the end of the flight, I stopped at the front and asked the Captain which
>FAA regulations were those that covered the prohibited electronic gear.
>
>The Captain appologized for not knowing the exact regulation number but said
>that the announcement was company policy. And that if I wrote to the airline,
>they could probably provide me with the regulation reference.

Right after we purchased a portable GPS, we flew to Arizona. When we boarded
the plane we asked the pilot if we could use it. He thought so, but wasn't
sure, so he opened up his airline regulations book, and we read directly out
of the book that almost ALL electronic gear was prohibited during the first
10 minutes and the last 10 minutes of the flight (ie, takeoff and landing).
There was some specific equipment which couldn't be used at any time in flight.
Since the GPS was not one of the "specific equipment" listed, he said,
"go ahead and use it, after the 10-minute announcement". Other
equipment that could be used during flight (but not at beginning or end)
included lap-top computers and cassette or cd players.

Now, as to the regulations from the FAR, here is the 1991 version (sorry, I
don't have a recent FAR at work, I keep the recent one at home):

91.21 Portable electronic devices.

(a) Except as provided in paragraph (b) of this section, no person may operate,
nor may any operator or pilot in command of an aircraft allow the operation
of, any portable electronic device on any of the following US registered civil
aircraft:
(1) Aircraft operated by a holder of an air carrier operating certificate
or an operating certificate; or
(2) Any other aircraft while it is operated under IFR.
(b) Paragraph (a) of this section does not apply to --
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device that the operator of the aircraft
has determined will not cause interference with the navigation or

communications system of the aircraft on which it is to be used.
(c) In the case of an aircraft operated by a holder of an air carrier operating certificate or an operating certificate, the determination required by paragraph (b)(5) of this section shall be made by that operator of the aircraft on which the particular device is to be used. In the case of other aircraft, the determination may be made by the pilot in command or other operator of the aircraft.

Translation: The FARs prohibit the devices on air carriers and on IFR flights. The air line carrier (NOT THE PILOT) is authorized to set its own regulations on which electronic devices CAN be used. On private flights, except under IFR flights, the PIC makes his own determination on which to allow.

I don't believe this particular FAR has changed in the past two years.

Diana

fmitch@netcom.com (Felton Mitchell) writes:
> Hey Smitty, if your Bug Catcher has a "top hat" mounted on top of the
> coil, what is the 2 foot whip above the coil/top hat for?

Contrary to what Don Johnson has written, when one _measures_ the
nehavior of a vertical antenna, with various lengths of whip *above*
the capacity hat, there *is* an impact from whip length on system "Q",
on resonance, and behavior of the system in general.

While the capcity hat does decouple some of the energy, the presence
or absence of a "stinger" above the capacity hat *does* influence
antenna behavior, especially when one takes the time to experiment and
measure and learn about teh possible effects... why don't we take this
to r.r.a.antennas?

Jim KZ2H asks...

>I am considering going HF mobile and was looking for first-hand comments on
>HF mobile antennas...

I have been using the Hustler mobile series for a few years now, sometimes with my Icom 735 (100 watts) and sometimes with my Ten Tec Argonaut (2-3 watts). It's a simple, rugged system that works ok, not great, but just ok. It consists of an aluminum mast that is around 5 feet long (designed to be a quarter wave on 6m), which you top with a screw-on "resonator" (loading coil and adjustable rod tip for tuning) for the band you want to operate on. You can get a "spider" mount to allow you to mount four(?) resonators at once to cover four bands of your choice simultaneously. A quick disconnect base mount for the mast is available, so you can stow the mast in the trunk when you're not on the air, instead of whapping tree branches with it! An antenna tuner is not necessary, but you will find that as the frequency goes down, the bandwidth of the resonators becomes smaller and smaller. This isn't much of a problem except on 40 and 80. There are WARC band resonators available, but I just haven't gotten any yet.

Back when the bands were in much better shape, I could work just about anyone I could hear on 10, 15, and 20, using the 735. 40 and 80 have been much more difficult, particularly 80. Of course, the antenna is very short for those bands.

You might want to read what Walter Maxwell W2DU has to say about the Hustler -- oops, "unnamed but popular" -- mobile antenna system in his book "Reflections". He seems quite unimpressed with the design of the loading coils, suggesting that efficiency was sacrificed for a no-tuner-required low SWR characteristic. He suggests a different design for the loading coils which in combination with an antenna tuner will offer a much more efficient antenna system, certainly a more important consideration for mobile vs. home stations. One of these days I'll try what he recommends... If you are so inclined, a cheap and fun project might be to buy the Hustler mount and mast then make up your own loading coils.

Good luck and 73,
Scott WO1G

Tom Bodoh N0YGT recently said

>The facts are;
> It's [Morse and CW] popularity is waning.

Tom, I must assume you're talking about the popularity of CW and Morse in amateur radio and if so, I must dispute your "fact". The 100 member ham radio club I'm in offers several license classes a year, and it has been our experience that there is *more* interest in Morse and CW since changing the Tech license to not require code. Tuning around the CW portions of the HF bands consistent with conditions will show plenty of activity. I will not claim that it is a "fact" that Morse and CW popularity is rising, remaining stable, or waning, but I simply offer my observations. I'm curious how you arrived at your strong statement.

|> wrap agreements are valid and in some they are not.

Does Motorola actually require its customer to sign a license agreement?
For that matter, does Motorola actually include a "license agreement" in with
each radio it sells?

I can read it now: "You can use this radio for a total of 30 minutes of
transmit time per day. Additional allotments of 30 minute transmission
blocks can be obtained by contacting your local Motorola representative."

Does anyone else think that manufacturers are really starting to get
silly? What next? A "license agreement" with that new Zenith color TV
you buy?

And people wonder what is wrong with American industry such that it
itsn't globally competitive today....

|> of basic communications technology concepts. Unfortunately, the
|> question pools are published, and since memorization is easier than
|> making the effort to comprehend (ask any college student), people
|> use that route.

Of course 5WPM code is rote memorization. Basically the method used to copy the code is 1) hear a character, 2) perform table lookup in your head, and 3) write down the alphabetic equivalent. While some people can use this method for 13WPM and higher, this method is the source of the "code block" which most people reach around 10WPM, as you can't think and write fast enough to perform that table lookup in your mind before the next character has already arrived.

Generally, children who are young do not have the proper education and understanding of mathematics and sciences to pass most amateur license theory tests. And, as someone said, they do not have the vocabulary. (Yes, there are always "exceptional" or "gifted" people who are the exception to this rule...)

Therefore, when you read a story in QST about a 5-year-old who passes his/her extra theory, chances are that the rote-memorization method was used, and the ham really has little or no understanding of what they actually "studied".

Unfortunately, many new hams in the amateur radio field who do not suffer from these impediments also decide to use the rote memorization method. There is one guy locally, who is a general, that has to physically look at his license to give his callsign. You'll hear him on a 2mtr repeater going "this is Kay-Bee... Uhhh, hold on..... Wun-Aye-Zed-You, yeah, that's my call".

Source record: 275269

> In rec.radio.amateur.misc, marcbg@feenix.metronet.com (Marc Grant) writes:
>
> Does anyone know the dates for Dayton in '94??

Yes, there is confusion over the dates, but I'm making my reservations for
April 29, 30, May 1, 1994.

The Details:

As we waited in Hara Arena on Sunday afternoon for the drawing of the
1993 grand prizes, the announcer mentioned that "at least we got next
years's dates in the program correct 50% of the time!", and he
explained:

The announcer said they printed it WRONG on page 90 in the
HamVention '93 program because it says:

1994 Regional Lodging
April 22, 23, 24, 1994 <--------- As I sat there, I followed the
announcer's suggestion and
CROSSED THESE DATES OUT!

But the announcer said they printed it CORRECTLY on page 11 in the
HamVention '93 program because it says:

Future Hamvention Dates
April 29, 30, May 1, 1994
April 28, 29, 30, 1995
April 26, 27, 28, 1996
These dates are tentative and should be used only as
a guide for future planning.

(What else would you use these dates for??)

----> I encourage a Dayton ham to contact the DARA (Dayton Amateur Radio
Association) and post a confirmation for us.

So I hope to see YOU at HamVention '94 on
April 29, 30, May 1, 1994.
==========

Hope this helps!

>
>The firmware is all copyrighted, tampering with it is a crime!

A recent Supreme Court decision says that reverse-engineering software is just fine with them.
Most of the additional features of the radio are activated not by modifying the firmware, but by setting values in non-volatile RAM (EEPROM, flash ROM, BBRAM, etc.).
They have NO copyright on the contents of YOUR non-volatile RAM. The content of every radio can be different and they can't send copies of it to the Copyright office; also, it's not in itself a "work", it's just a series of numeric values the firmware reads.
So, if you reverse-engineer the firmware and change your NVRAM, they have nothing to say about it. (I'm not a lawyer -- I just play one on my computer.)
However, the intent of the ad seems to be to stop those who stole the Motorola internal programming software from retaining it or profiting by it. In THAT respect they're 100% right.

(paramedic hat on)
The emergency medical service I serve with has a whole stack of Motorola 800 MHz trunked radios. If I had anything to say about it, we'd not have any at all, even though my city has a Smartnet II trunk system. The reason is simple: Motorola jacked us around on delivery of the first 20 radios. We ordered a stack of MTS2000s, and were promised delivery in July. We got the radios in December. For those six months, I had to hold together our fleet of HT220s and MT500s with chewing gum and baling wire, and we had a couple of instances where medics avoided getting themselves in trouble without communications only by sheer luck. They also screwed up our order when we finally got them, and are having to eat the cost of 36 high-capacity batteries (since they didn't provide what we ordered the first time).

We also have three MAXTRAC mobiles. Two of them work fine. One has worked only very intermittently for the past year. The local Motorola techs can't seem to pull their fingers out of their butts enough to figure out what the problem is. As a result, we're struggling along in that ambulance using portables for communication.

We'd switch vendors, but Motorola has succeeded in squashing second sources - so we're stuck. (Yes, I know Standard makes a Motorola-compatible trunked radio, but we had one for a while and couldn't get it to work on our system.)

As far as I'm concerned, Motorola couldn't give a fuzzy rat's ass about public safety. Once they have your money, the hell with you.

(I don't have packet BBS access at the moment; could someone forward this to the original author?)

===-----> ATTENTION ALL HAMS IN THE NORTHEASTERN US: <-----===

This Saturday and Sunday, October 9-10, 1993

ARRL Connecticut State Convention and Nutmeg Hamfest

The Fairgrounds in Durham, Connecticut

(10 minutes from I-91: take I-91 to Exit 15/Rte 68, then 68 to Rte 17)

Open Saturday afternoon at 3 PM for camping (hookups)/tailgating;
Midway gates open Sunday 9 AM-3 PM for hamfest, ham and computer
dealers, flea market/swapfest, new and used equipment, special
forums and conferences, demonstrations, license exam sessions
(ARRL-VEC teams), refreshments, much more!

RAIN OR SHINE--INDOOR AND OUTDOOR DISPLAYS AND BOOTHS!

Talk-in: 147.36; 147.09 (CTCSS 110.9); 145.29 repeaters

Sponsored by the Middlesex Amateur Radio Society/Connecticut Amateur Radio
Emergency Service (MARS/CARES), with the Meriden ARC and the Shoreline ARC.
Proceeds will help support area charities, public service, scholarship and
civic activities.

[Newbie alert!]

Hello,

Having just obtained my license, I'm trying to get on the air (while maintaining my reputation for being cheap :-). A friend has loaned me an old Kenwood TR-2200A 2m FM 'portable', and I would like to get some crystals to make it more useful in this area (Boise, ID) -- he hasn't used the radio much since he moved from Missouri.

I would like to know if such crystals are available, and from where. Is there a special type of crystal that should be used, or will the seller know from the radio model number? Also, when I install these crystals do I need to adjust the little trimmer next to the socket I put the crystal in? How do I do this (what tools are needed, aside from a screwdriver)? I do not have the owners manual, or any other documentation.

Hopefully I'll get something a little more modern at the end of this month during our local annual swap meet :-) Meanwhile, I still have to make a first contact...

Thanks very much.

>their infinite wisdom make the tests even easier, I just can't wait to
>what happens to HF. CB is a good case for what can happen when you
>do exactly what everyone seems to want. No code, no test and no quality!

Perhaps eventually they will stop screaming. The UK has had a code-free license for about twenty years now. The only difference (as I'm sure has been stated many times already) between access to 6 metres and down, and the whole amateur spectrum is the Morse code test.

Unless things have changed greatly during my 7 year absense the "no-coder's" there don't scream about getting free access to the HF bands. They just accept the code requirement as the passport to HF - I know I did.

Why should US no-code licensee's expect any different?

FWIW - In my case I chose to take the Morse test because I wanted to use it on the VHF/UHF bands. Today I still have very little interest in working HF, although I have the piece of paper that says I can do so.

73 one and all,

Chris

>I am considering buying a used Yaesu FRG9600 receiver. Any experiences,
>good or bad, you want to share?

The 9600 is a good communications receiver. It covers 60 to 905 MHz
continuously, in AM, SSB, or FM modes. It's a reasonably hot receiver, and
performs well in crowded environments. There's even an NTSC TV demodulator for
it (though I expect that that wouldn't do you much good). It has a computer
interface that's not too hard to deal with, and there are programs out there
in the public domain that talk to it.

It is, however, a lousy scanner. It has only one scan mode, and that one's
slow and useless for normal scanning.

>The intended use is for mobile monitoring, where something with sensibly
>sized controls is essential! [ever tried programming a scanner while
>driving? Sorry, Officer, I was just tuning my radio.....]

The controls are usable in a mobile environment if you're not impossibly
fat-fingered. The channel select knob, in particular, is large and friendly.

Basically, if you're looking for a receiver with some limited scan capability,
it's a good one. If you're looking for a scanner, though, look elsewhere.

>interested in being able to monitor public service band (138-174Mhz)
>as well as 2m. It looked like a good price in the HRO catalog.

I *love* mine. The only things I dislike about it is that the front-panel keypad is for DTMF _only_ and not for frequency entry, and that the display doesn't include a signal strength indication.
The battery that came with it, as well as the identical extra I bought, took a LONG time (about 10-20 charge/discharge cycles) before it would hold a charge very long. First use, I got about an hour of receive-only time at fairly low volume. After cycling, they seem to give about 24 hours of receive-only, or about an hour of key-down time at high power (2W with supplied battery, which is 7.2V/700 mAh).
I've dropped this thing more often in the months I've had it (since Jan. 31) than I dropped my IC-02AT in (7? 8?) years, and the only damage is a chipped "0" key and a few scratches.
Comes with a "stubby duck"; full-size rubber duck optional. Rather than buy that, I'd go with one of the tall Larsens or a 1/2-wave.
Lots of available accessories (ask for a spec sheet). I did not like the audio quality of their speaker mikes, so I bought a $20 Radio Shack unit which is a bit flimsy but otherwise okay. Tunes from 130.000 to 173.995 MHz; in the absence of mods (which I don't know exist; they've been asked for in the newsgroups and no one's answered the poster), its tx range is 144.000 to 148.000, and outside that range keying the xmtr makes the display read "OFF".
Sensitive rx, tx gets out somewhat better than I'd expect for 2W, good audio on both rx and tx (though my unit came with the deviation set a bit high, another I heard didn't; I just stay away from the mike).
For the money, you can't beat it.
Now, here's hoping Alinco service is as good as the rig is...

3236. Re: Motorola ad in QST?

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-07 17:39:24 UTC
From: jgd@dixie.com
Message-ID: <vr6z05g@dixie.com>
Source record: 275410

After quoting entire articles,
burke_br@adcae1.comm.mot.com (Bruce Burke Sp App) chants:

>You are partially wrong John. The part about enhanced software is correct, the
>rest is wrong. Reprogramming the radio with RSS is OK, it is those folks who
>have some hacked up version that try to make a living adding features
>not paid for that the company is after.

And

>The firmware is all copyrighted, tampering with it is a crime!

And

> Tony, you seem to forget that there are millions of dollars poured into
>the development of new radios, the company certainly has the right to charge
>for whatever they develop. So get back on base and think what you would do if
>it was YOUR company that had to make a PROFIT!

Bruce seems to be a real cheerleader for Motorola. After you read the
following, you will understand why. Motorola has instituted one of the
most henious personal privacy invasion programs I've ever seen. Anyone
who would continue to work for the company in the face of this must
be incapable of independent thought. When you read this, keep a copy of
Orwell's "1984" at hand. The parallels are frightening.

Motorola need never worry about my pirating their precious software. I'll
never conciously allow a Motorola part in my building if I have some other
choice.

John

For anyone interested in the full scoop on the Motorola drug craze -
what the rules for their testing program are and so on - here is a
verbatim copy of the manager's briefing book. The few comments in
curly brackets are mine - everything else is straight from the book.
Watch out for the non-sequitors.

April 1990

TO: Senior Managers
Site implementation teams

Addressing the issue of drug use in Motorola is not new. In addition
to our Employee Assistance Program, we have "applicant" and
"for-cause" testing policies in place.

We've talked at length to Motorolans at all levels of the company. We've consulted with recognized experts throughout the U.S. And, we've examined the drug-free programs of other companies, including those in the defense community.

As a result of these discussions, we've put together a policy that will enable all U.S. Motorolans to work in a drug-free environment.

On May 18, we will announce to all U.S. employees the new policy for a drug-free work force.

Implementing this policy will likely be among the most challenging tasks we've ever undertaken as a company. As senior managers and implementers, I am looking to you to take hold of this policy and to help manage this program in your respective organizations. Your role is critical: To help insure that the policy is understood and implemented fairly. Consider these potential employee questions:

* Why does Motorola have a drug-testing policy?
* How will individuals be selected for testing?
* What if I don't want to be tested?
* Is the test accurate?
* What if I test positive?
* Can I use my spouse's prescription drugs?
* Is the drug-testing policy legal?

This briefing book provides you with advance material. It will help you begin thinking about implementation at your site, prepare you to respond to employee questions and concerns, and give you a resource for briefing your managers and supervisors.

I encourage you to review the contents of this briefing book and to bring your comments and questions to the attention of your local personnel manager.

<squiggle>

George Fisher

MOTOROLA CONCERNS

1. Business Environment and Culture

Motorola is concerned about drug use in its business environment and culture. Chief among these concerns is the impact of drugs on the quality of our products and services. Quality depends on creative, clear thinking, productive employees. Drugs change the way we feel, think, decide, perform and perceive.

2. Customer, Stockholder and Employee Expectations

Attainment of increased global market share and total customer satisfaction requires best-in-class people, products and work environment. Customers, stockholders and employees who have a stake in Motorola's performance stand to lose a great deal because of drug

use in the work force. By offering our customers, stockholders and employees an environment free from the damage caused by drug use, we're also giving ourselves a truly competitives advantage. Our stockholders look to us for maximum productivity. That includes employee profit sharers. We are also committed to comply with the requirements of the Drug-Free Work Place Act of 1988, and for certain segments of our company, the Department of Defense Drug-Free Work Force regulations and the Department of Transportation regulations.

3. Safety, Security, and Health

Statistics tell us that workers who use drugs are involved in accidents 3 to 4 times more often than other employees. The drug-using employee costs U.S. industry $100 billion every year. For example, drug users are late to work 3 times the norm, and are absent 3.6 times the norm. Employees on drugs are 3 to 4 times more likely to be injured on the job. They are accident prone 3.6 times the norm, and use sick benefits 3 times the norm. Employees on drugs are 5 times more likely to use Workers' Compensation.

4. Our Drug Experience

Motorolans have become increasingly aware of the growing use of drugs on the job. They have expressed these concerns during focus group sessions conducted at several Motorola sites during the past six months. Our experience in applicant testing showed a drop from 9 percent positive tests when the program began in 1987 to a current level of 2 percent. We have also had our Employee Assistance Program in place since 1979. Event with these resources, we have to assume that drug use affects between 4 and 10 percent of our work force.

5. Society's Problem is Ours

Surveys tell us that 10 to 23 percent of all U.S. workers use dangerous drugs on the job. Our Policy Committee, comprising the CEO and business and functional general management, believes that society's problem is our problem and that industry can impact society's drug problem. The U.S. comprises 6% of the world's population, but consumes 60% of the world's illegal drugs. The drop-out rate among ninth graders entering school today ranges between 30-40%. Statistics tell us that today's "casual" drug users are, in fact, financing the drug industry.

EMPLOYEE CONCERNS

Twenty focus groups were held between October 1989 and April 1990 in Schaumburg, Plantation, Austin, Phoenix, and Boston. Approximately 400 Motorolans provided input to the question: "Should Motorola have a policy for a drug-free work force?" Here are some reactions:

1. General Tone and Feeling

* A vast majority of those participating enthusiastically support the idea of a Motorola policy for a drug-free workplace.

* Some individuals struggle with the invasion of privacy issue in drug testing.

* Many feel that such a policy is long overdue in Motorola. They can support it because they believe it will heighten their feelings of safety and security in the work place.

2. Selected Responses

"There is cocaine use in the chemical bays at our site."

"Our increased absenteeism is directly related to drug use."

"Mandatory testing would be an invasion of my privacy. I don't like it!"

"We need to minimize the illegal use of prescription drugs."

"About 20-30% of my department is using drugs."

"Why would Motorola ask me to prove my loyalty?"

"We need to get tougher on drug dealing and gang-related activity"

"I support drug-free, but I don't want to have to prove my innocence."

"Some lower-paid employees have to 'deal drugs' in order to 'use drugs'"

"Three employees in our department were testing and all were dirty."

"One professional abandoned his family while selling and using drugs."

RATIONALE

1. Consistent With Motorola's Culture

Establishment of a drug-free work force policy is consistent with Motorola's desired culture and in the best interest of Motorola and Motorolans.

2. Must Have to Achieve Fundamental Objective

Attainment of increased global market share and total customer satisfaction requires best-in-class people, products and work environment.

3. Help Solve Society's Problem

Elimination of drugs in the work place and work force is essential to help solve society's problems in dealing with drugs.

4. Enhance Safety, Security and Well-Being

Eliminating the possession and illegal use of drugs in the work place and work force, and providing the opportunity for rehabilitation for employees who use drugs, will enhance the safety, well-being and productivity of all Motorolans.

5. Motorola Drug Experience

Motorola has experienced problems with drugs in the work place (as have all major U.S. companies) and there is an employee perception that drug use is an ongoing problem at Motorola and should be eliminated.

6. Meet Government Regulations

Motorola will meet the requirements of the Drug-Free Work Place Act and the regulations of all government agencies with which we do business.

POLICY HIGHLIGHTS

1. Objective Is A Drug-Free Work Force

The objective of our policy is a drug-free work force and work place. We will achieve this by eliminating the use of illegal drugs and the abuse of controlled substances.

2. U.S. Employees

The new policy applies to all U.S. operations, including subsidiaries, unless restricted by state or local laws. It also includes outside / independent contractors and temporary employees.

3. Adds Universal Testing to Existing Policies

Motorola's policy for a drug-free work force expands its current drug use policies to includes universal drug testing for U.S. employees. We currently maintain policies covering "applicant" testing and "for cause" testing. Universal testing is a logical next step.

4. Multi-Dimensional Approach

Motorola's policy provides a multi-dimensional approach to the drug use issue, while meeting all federal and DoD regulations. The multiple elements of our approach provide:

* _Education and Awareness_ through meetings, resources and training;

* _Rehabilitation_ through Motorola's Employee Assistance Program;

* _Prohibitions_ against the use, sale, possession and manufacture of illegal drugs;

* _Universal Testing_ of U.S. Motorolans at least once every three years;

* _Consequences_ for Motorolans who test positive.

POLICY VIOLATIONS

Motorola's policy for a drug-free work force specifically prohibits the following:

* Manufacture, distribution, possession and use of illegal drugs and the abuse of controlled substances;

* Refusal to authorize the collection of a sample or provide a urine sample for testing;

* Failure to attend the Employee Assistance Program for consultation and assessment after a verified first-time positive urine test;

* Failure to adhere to an agreed-upon Employee Assistance Program action plan;

* Failure to comply with Motorola rules with regard to testing;

* Use of a medication / prescription prescribed in another person's name;

* Storage of any illegal drug on company premises;

* Being under the influence of any illegal drug while on company business;

* Testing positive for the use of illegal drugs or abuse of controlled substances;

* Switching or adulterating any urine sample.

RANDOM SELECTION

Motorolans will be tested at least once every three years. The selection process uses a non-biased computer selection program. This is a formula which tells the computer how to select employees for the drug test. It guarantees the integrity of the selection process. This random-selection process is scheduled by collection point so that no one area will have more tests than it can handle. Each day, the computer selects employee numbers randomly from four pools:

1. Those yet to be tested;

2. Those tested who received a negative result;

3. Those who tested first-time positive who must retest at least three times over the next 12 months;

4. Those who were no-shows for their previous scheduled test.

NOTIFICATION

1. Timing

Before the first shift each day, Health Services receives the names of Motorolans to be tested that day. Department managers are then

informed of the names and scheduled test times.

2. No Shows

If the Motorolan is on site that day, the supervisor is responsible for arranging the employee's schedule so the testing appointment will be kept. If the Motorolan is not on site, the supervisor will be asked to supply a reason for the "no-show" to Health Services. Employees who are not available on the day of the test, as a result of an absence, will be re-selected for testing within the next 90 days.

3. Location

The Motorolan reports to Health Services or the collection point, where the collection and chain of custody process begins.

COLLECTION

Motorola and its certified drug-testing laboratory will maintain a clear, well-documented procedure for the collection, shipment and documentation of urine specimens for testing.

1. Chain of custody

This procedure includes the use of a multiple-part chain of custody form with an original that accompanies the specimen to the laboratory.

2. Tamperproof sealing system

It also includes the use of a tamperproof sealing system designed such that:

* The specimen bottle top can be sealed against undetected opening;

* The bottle can be identified with a unique identifying number identical to that appearing on the chain of custody form;

* The bottle can be initialed to affirm its identity.

3. Consent form

At Health Services (or other collection site), the Motorolan will be required to complete a consent form, agreeing to take the test and to have the test results released to Motorola.

4. Collection Process

* Employee receives a plastic cup, which had been sealed to prevent contamination;

* Employee provides a urine specimen in private;

* Specimen is checked for temperature and poured into a shipping bottle;

* Chain of custody form is explained and signed;

* Specimen bottle is sealed with a lid and tamperproof sealing tape;

* Seal is fixed to the bottle;

* Employee writes his / her initials on the tape;

* Chain of custody form and the bottle are placed in shipping box; and

* Final seal is placed around box, which is sent to CompuChem.

RESULTS NOTIFICATION

1. Negative and First-Time Positive Test Results

A Medical Review Officer will review and interpret all positive test results. A negative test result will cause a letter to be sent from Health Services to inform the employee of the result.

An employee will be notified of a positive test result by registered letter from Health Services. It requires the employee to contact the Medical Review Officer within 24 hours. The Medical Review Officer will conduct:

* A medical interview with the individual;

* A review of the individual's medical history; or

* A review of any other relevant biomedical factors.

If the Medical Review Officer determines there is a legitimate medical explanation for the positive test result, he will report the test result as negative.

2. Referral to the Employee Assistance Program

Once a first-time positive test results has been verified, the Medical Review Officer shall refer the case to Health Services, which is responsible for notifying Personnel. Personnel will meet with the employee and will refer him / her to the Employee Assistance Program for consultation, assessment and the completion of an appropriate and agreed-upon action plan.

3. Supervisory Knowledge / Security Clearance

The employee's supervisor shall be notified of the verified positive test result only if the employee agrees that his / her supervisor should be told, or on a need-to-know basis including, as required, to insure the employee's safety and that of others, to protect Motorola's proprietary and confidential information, and to comply with state or federal regulations. Employees having a security clearance who are confirmed first-time positive will be reported to the federal agency which authorized the security clearance. If an employee loses a security clearance as a result of such adverse information, the employee may be subject to termination.

4. Second-Time Positive Test Results

Once a second-time positive test result has been verified, the Medical Review Officer will refer the case to Motorola management empowered to take administrative action. Individuals having confirmed second positives will be immediately subject to termination.

APPEALS

1. Right to appeal

An employee will have the right to appeal a positive test result by written request to the sector / group / corporate personnel director.

2. Considered by Medical Review Officer and Personnel Director

The Medical Review Officer and the personnel director shall consider the appeal, and their decision shall be final.

3. Remedy

Where the appeal challenges the accuracy or validity of the laboratory test result, if granted, the sole remedy shall be a re-analysis of the original sample by Motorola's testing laboratory.

TIMEFRAME

1990 -

4/24 Brief Public Relations and Spokespersons
5/3 Announce to All Officers
5/3 Conduct Videoconference Briefing
5/4-16 Announce to Managers and Supervisors
5/18 Announce to U.S. Employees
5/21 Announce to Media
May (ongoing) Initiate Drug-Test Information Line
Jun-Aug Test Senior Management Participants
Jun-Sept Train Managers/Supervisors
Sept Begin Testing at GEG {gov't equipment group}

1991
Jan Begin Testing for All U.S. Employees

EMPLOYEE COMMUNICATION

April 26 Briefing Book
Videoconference participants receive an advance briefing book prior to the videoconference. {this document}

May 3 Officer CMS Post
Officers receive a CMS-Post announcing the new policy and providing a copy of the letter to the home.

May 3 Videoconference
Local implementation teams participate in a two-way dialogue on the new policy.

May 4-16 Management/Supervisory Briefings
Managers and supervisors are briefed on the policy, timeframes and Q&As prior to the general employee announcement.

May 18 Employee Announcement
Employees receive a letter from the CEO, announcing the new policy.

May-April 1991 Information Hotline
Corporate Personnel operates an anonymous drug testing information hotline for U.S. employees.

May 18 Drug Awareness Booklet
Send a drug awareness educational booklet to employees.

June-March 1991 Site Publication Articles
Site publications run a series of monthly articles to increase awareness.

September-December Site Posters
Sites display a series of four posters to increase awareness.

October-December Employee Briefings
Sector / group / corporate briefs employees at communication meetings.

PUBLIC RELATIONS PLAN

1. News Release

A news release on the announcement to employees will be issued on May 21, 1990, in each major plant location (draft to be distributed) during or just after the employee announcement. The timing is to insure the employees are informed first.

2. Handling Inquiries

All press inquiries will be answered at the plant community level by designated public relations personnel. In some cases, a Sector / Group may elect to handle press inquiries from a central location for plant cities where no public relations personnel are present.

3. Tone

The tone of the news release (and the tone of the responses to press inquiries) will be positive and straight-forward, with no apologies or defensiveness. Our position on this announcement is that we are taking a positive stand for a drug-free work force, and that our stand also will make a difference in the communities in which we have plants and facilities. In addition, Motorola must meet the requirements of the Drug-Free Work Place Act of 1988 and, for certain segments of our company, the Department of Defense Work Force regulations and the Department of Transportation regulations.

4. Interviews

A designated spokesperson will be available at each major plant city location for interviews by the press as deemed necessary or prudent.

The need for these interviews may be triggered simply by the desire of given media to probe the new policy more deeply, or an interview may be desirable in any community where there is latent opposition to such policies or for other reasons. These spokespersons have been selected jointly by the local public relations manager, personnel manager and plant or facility manager, and will be prepared for any interviews. We generally decline on-camera television or on-air radio interviews. Judgement should be used if a spokesperson does elect to go on camera or on air.

5. Questions and Answers

In responding to press inquiries or in interviews, Motorola public relations personnel and designated spokespersons will adhere to the approved questions and answers provided in the Briefing Book, the news release and the Public Comment Guidelines. If additional questions or issues are raised that are not covered in the Briefing Book or news release, public relations personnel will determine the appropriate answers or responses off-line and respond to the inquirer as quickly as possible.

TRAINING PLAN

1. Purpose of Training

The purpose of the training is to assist Motorola in the implementation of the new Policy for a Drug-Free Work Force by training supervisors and managers to administer the policy with confidence and competence.

2. Objectives

1 - To understand and be able to communicate to employees the rationale for the policy;

2 - To understand and be able to communicate to employees the policy itself;

3 - To recognize and respond appropriately to pre-defined events relating to the policy;

4 - To respond professionally to employee questions, objectives and statements relating to the policy.

3. Course Structure

Module One: The policy rationale
Module Two: The policy itself
Module Three: Policy administration
Module Four: Professional Confrontation Skills
Module Five: Presenting the Policy to Employees

4. Training Outputs

1 - a 150-minute video incorporating the above modules.

2 - Printed supervisor and facilitator guides to provide support to the video-based training;

3 - Train-the-trainer materials
* Methodology for Training (training technique)
* Facilitator training system (video).

5. Training Delivery Mode

A continuation of video-based and print-based training with breaks for discussion, role play and questions and answers, facilitated by one of 64 trained Motorola supervisors.

EMPLOYEE ASSISTANCE PROGRAM

The Motorola Employee Assistance Program (EAP) has been available to Motorola employees and covered dependents since 1979. EAP provides assessment and consultation for a wide range of difficulties including marital, personal and stress-related problems, as well as problems with the abuse of drugs.

The Employee Assistance Program is staffed by professionals who respect employee confidentiality and offer quality and cost-effective referrals for rehabilitation. The initial EAP assessment and consultation is available without cost. However, further assessment and rehabilitation costs can be reimbursed through the employee's HMO, which generally has limited coverage for drug-related problems, or the Motorola Employee Medical Plan. Employees are responsible for the payment of any cost not covered by their chosen medical coverage.

Employees may seek assistance from their local EAP representative before the implementation of universal drug testing. EAP staff will provide an assessment, consultation, rehabilitation recommendations and a continuing action plan for recovery. Early intervention by qualified professionals can assist employees in contributing their full potential to Motorola and enjoying life to its fullest.

EAP professionals will not notify management, unless required by law, if a employee requests assistance prior to implementation of universal drug testing. Participation in EAP does not exclude an employee from being selected or required to take the drug test. When selected, the drug test must be taken.

If an employee is selected and tests positive, the employee will be referred to EAP where a mutually agreed upon action plan will be designed, based upon individual need. The employee's participation, cooperation and successful completion of the agreed upon action plan is required.

The emphasis of Motorola's drug testing policy is rehabilitation. The Employee Assistance Program provides the avenue to accomplish that goal.

GENERAL

Q: If employees are, for the most part, in favor of the program and Motorola focus groups suggest that the most fair policy tests all employees, how do you explain that there is a highly vocal group in Austin who are picketing, threatening to unionize, filing a class action lawsuit, and so forth?

A: We know from our focus groups that this policy would be supported by the majority but not all of our employees,. Based on what we heard from employees and what we know about this issue in Motorola and in the U.S., we were willing to assume some of the risks. (The employees in question are employees of Texas Instruments.)

Q: What would Motorola do if it found out that one of its key executives was a recreational cocaine user? Would he be treated exactly the same as a production worker? Wouldn't a highly placed executive get special treatment or special consideration?

A: All employees will be treated under the same policy guidelines.

Q: What percentage of potential new hires fail the pre-employment drug test?

A: Approximately 2-3 percent of current job candidates do not pass the drug test.

Q: Can you break it down for our area?

A: We prefer not to do so.

Q: Aren't you making me prove my innocence by taking a drug test?

A: Motorolans involved in focus group sessions around the company recommended that a fair policy should include the testing of all Motorola employees, rather than selected employees. For the good of the cause, we are asking you to be part of the process to maintain a safe, drug-free work force. We need your understanding and cooperation in order to preserve the high quality of our products and to meet the expectations and requirements of our customers.

Q: Is there one area of the country worse than another in terms of drug-related problems Motorola has had?

A: There does not appear to be an appreciable difference.

Q: What were some of the drug-related problems at Motorola that prompted the company to take such an action?

A: Employee input during focus group sessions indicates they feel we have a problem. We cannot site {sic} specific instances for reasons of confidentiality. However, we have experienced a variety of problems, from theft and vandalism to the emotional, physical and other health problems experienced by some of our employees.

GENERAL

[You should be familiar with the following questions and answers regarding Motorola's policy for a drug-free work force. These are typical of the questions employees are likely to ask. You may find it helpful to write out a list of the "local" questions you can anticipate from your employees.]

Q: Why is Motorola doing this?

A: Motorola developed this policy as a logical extension of its applicant and its "for-cause" drug testing policies and its commitment to the Employee Assistance Program. Motorola's top mangement believe that a best-in-class work force is a key ingredient for a safe, drug-free work place and a competitive advantage in achieving total customer satisfaction.

While it is true that we have experienced drug use problems, like other major U.S. companies, our purpose is to prevent the kind of drug problems in our work place which are now facing our nation. Motorola must meet the requirements of the Drug-Free Work Place Act of 1988 and, for certain segments of our company, the Department of Defense Drug-Free Work Force Regulations and the Department of Transportation regulations. We also believe that by taking a positive stand for a drug-free work place for Motorolans, we will make a difference in the communities in which we work and live.

Q: Who made this decision?

A: Motorola's Policy Committee made the decision to establish this policy. This committee comprises the CEO members and the general managers of our businesses and functions.

Q: How long has the company been contemplating such a policy?

A: Motorola has been looking at drugs in the work place since 1985. In 1987, we established a pre-employment drug test program. We have been researching a universal drug testing program for all U.S. employees since 1988.

Q: What does illegal drug usage cost Motorola annually in health care costs?

A: Assuming that Motorola hired those job candidates who were screened out since April 1987 by our applicant drug test, and projecting the national average of 7 percent employee involvement in illegal drugs, we would have spent $1 million more per year in increased medical costs alone.

Q: What percentage of the employee population will be lost due to (a) refusal to comply with the voluntary testing, (b) two positive test/failing rehabilitation?

A: We prefer not to speculate on either question.

DRUG TESTING PROCEDURE

Q: Who will be tested under this policy?

A: All full- and part-time employees of Motorola, Inc. and its subsidiaries are included. Outside contract / temporary employees are also subject to Motorola's drug testing program. Guidelines for handling these groups will be implemented by sector / group / corporate.

Q: How will employees be selected?

A: A number of Motorolans will be selected, via a non-biased selection procedure, from the employee population which has not been tested. Also, a number of Motorolans will be selected from the employee population that has been previously tested. This computerized process ensures fairness and an equal statistical chance to all.

Q: What is the non-biased selection procedure?

A: It is a formula that tells the computer how to select employees for the drug test. It guarantees the integrity of the selection process.

Q: Is the test going to be a blood test or a urine test?

A: The test will be conducted on a urine sample.

Q: How much time does the test require?

A: Normally, 15 to 20 minutes.

Q: Must I sign a consent form before taking the test?

A: Yes, a consent form must be signed before the test sample is taken.

Q: If I put a statement on the form that I'm signing under duress (or other statement that I disagree with the policy), will I be terminated?

A: No, as long as you sign the form and take the test.

Q: What if I don't want to be tested?

A: Your employment will be terminated if you do not consent to the test.

Q: How will anyone know if I don't show up for the test?

A: Attendance will be tracked and "no shows" will be re-selected for testing within 90 days.

Q: What if I have a meeting when I'm supposed to take the test?

A: You must comply with the testing schedule if you are on the site. In special situations, Health Services may reschedule you for another time on the same day. Failure to complete the test on the day scheduled will result in your being re-selected for testing within 90 days.

GENERAL

Q: What are other companies doing about the problem?

A: Many companies are testing for pre-employment. Motorola is one of a few leaders in the universal testing of current employees.

Q: Who else has universal drug testing?

A: Texas Instruments is the only company our size which has such a policy. Dow Chemical and Exxon are testing universally at some of their facilities.

Q: How much will this program cost?

A: It will cost approximately $1.5 million in the first year.

Q: How soon will Motorola complete the testing of all its employees?

A: All employees will be tested at least once every three years in those states where such testing is permitted.

Q: Do Motorolans outside the U.S. have to do this?

A: At present, they don't. Because of differences in laws and practices in various countries, future decisions to test Motorolans at international sites will have to be made on a country-by-country basis.

Q: Who will we use as our testing laboratory?

A: We will use the CompuChem Laboratory in Research Triangle Park NC, the same firm that provides our current applicant tests.

Q: What drugs will be tested for?

A: We will test for the following:

* Amphetamines, e.g., Dexedrine, Speed, Ice, Crank, Uppers
* Barbiturates, e.g., Downers, Seconal, Nembutal, Amytal
* Benzodiazepines, e.g., Ativan, Dalmane, Librium, Valium
* Cocaine, e.g., Crack
* Cannabinoids, e.g., Marijuana
* Methodone
* Methaqualone, e.g., Quaaludes
* Opiates, e.g., Heroin, Morphine, Codeine
* Phencyclidine, e.g., PCP, Angel Dust

Q: What about alcohol abuse?

A: Although alcohol abuse is a major national problem, alcohol is not an illegal drug. However, the use, possession, sale or distribution of alcohol on company premises or in company-supplied vehicles is prohibited and constitutes a major infraction of Motorola's policy. Our current policy encourages employees with alcohol abuse problems to seek treatment through the Employee Assistance Program.

ACTIONS IF TEST IS POSITIVE

Q: Who determines a "verified" test result?

A: The Medical Review Officer is the only person who can a {sic} verify a positive test result. That individual makes the determination based on the test results from CompuChem and interviews with employees.

Q: How will I find out if I tested positive?

A: Once the Medical Review Officer has made a determination, Health Services will notify you. A positive test result will be documented in your confidential Health Services file.

Q: Who is a Medical Review Officer?

A: The Medical Review Officer is a licensed physician who has knowledge of substance abuse disorders and appropriate medical training to interpret and evaluate a positive test result.

Q: Who else will be informed of my verified positive test result?

A: Besides Health Services, the only people who have a need to know about a positive test results are Personnel and, where appropriate, your supervisor.

Q: When is it "appropriate" for my supervisor to know?

A: It is appropriate when you agree that your supervisor should be told, and on a need-to-know basis including, as required, to insure your safety and that of others, to protect Motorola's proprietary and confidential information, and to comply with state or federal regulations.

Q: If I have a positive test, will I receive disciplinary action?

A: If this is your first positive test, you will be given an opportunity, though counseling or rehabilitation, to stop using drugs without jeopardizing your employment. If this is the second positive test, your employment will be terminated.

Q: Will Motorola permit a "re-test" if I feel a mistake has been made?

A: You have the right to appeal a positive test result. You should make a written request to your sector / group / corporate personnel director. The Medical Review Officer and your personnel officer will consider your appeal and their decision will be final. If your appeal challenges the accuracy or validity of the laboratory test result, if granted, the sole remedy will be a re-analysis of the original sample by Motorola's testing laboratory.

Q: What if I have government clearance and test positive?

A: Motorola is required by contract with the government to comply with the provisions of the Industrial Security Manual. This requires that

Motorola notify the government and suspend the clearance. The agencies of the government, not Motorola, grant and rescind clearances.

Q: Can I be rehired if I am terminated under this policy?

A: You can be considered for rehire as any other employee terminated "for cause".

DRUG TEST PROCEDURE

Q: How many times will my sample be tested?

A: Each sample will be screened first by enzyme immunoassay procedures (EMIT) to determine the presence of a drug in the sample. Those samples with such a presence will undergo a confirmatory test by Gas Chromatography / Mass Spectrometry (GC/MS).

Q: How and when will I be notified of test results?

A: Health Services will send a letter to the address you designate, within 10 business days of your test. The letter will announce a negative result or, in the case of a positive result, will ask you to call the Medical Review Officer within 24 hours of your receipt of the letter.

Q: Will I be tested again if my test is negative?

A: The selection process for testing does not set limits on the number of times you may be tested during the course of your employment. A non-biased selection process means that all employees are subject to selection on an ongoing basis.

Q: Will anyone else know if I passed or failed the test?

A: Only those who need to know, generally Health Services, Personnel, and, where appropriate, your supervisor. Test results will be electronically passed from CompuChem to the Medical Review Officer. Health Services will notify you.

Q: Will Motorola test me after an accident or injury?

A: If there is a reasonable basis to suspect drug use, or you are in a position involving national security, health or safety, or other functions relating to defense contract work, you could be tested.

Q: What if I used drugs in the past but not now?

A: Most drugs will be out of the system in a matter of days. Some, like marijuana, may remain in the system for 30 to 60 days, depending on the extent of use.

Q: How do we know the test lab is not making mistakes?

A: In addition to the many safeguards in the procedure and certification by all the leading drug certification organizations, both the lab and Motorola submit blind samples to make sure there are

no errors. If a blind sample were to come back with an erroneous reading, the who batch would be destroyed and systems would be checked before samples were re-tested.

CONFIDENTIALITY / PRIVACY / EQUAL TREATMENT

Q: What is on the consent form?

A: Before taking the universal drug test, you must sign an approval form agreeing to the test and consenting to the release of test results to Health Services. This permits Health Services to communicate or disclose your test results to others in accordance with the policy and procedures. This information may also be disclosed to others where required or permitted by law.

Q: Will there be exceptions for employees who have to take medication?

A: The Medical Review Officer will verify all prescription drugs. This information will remain confidential.

Q: If I get help for drug use, will this be put in my file?

A: If you seek help voluntarily through the Employee Assistance Program prior to your test selection, your participation in the Employee Assistance Program will remain confidential in accordance with the Employee Assistance Program policy. If you are referred to the Employee Assistance Program as a result of a first-time positive drug test, information relating to that test and rehabilitation will be kept in your Employee Assistance Program file, but not in your personnel file.

Q: How can I be sure my rehabilitation is confidential?

A: Your rehabilitation is confidential, and will be held in your Employee Assistance Program file.

Q: Can supervisors harass Motorolans they don't like by making them test more than once?

A: No. Drug testing selection is a computer-generated program. There is no possible way that the non-biased selection procedure can be used by a manager or supervisor to harass an employee.

PRESCRIPTION DRUGS

Q: What proof will I have to show that I am taking a prescribed drug?

A: You will need to have a prescription number, doctor's name and the name of the drug store.

Q: What if I use my spouse's prescription?

A: If you have tested positive for a certain drug, you must have a prescription in your name for that drug. If you do not have a prescription, it will be treated like a positive test result.

Q: What if I have a prescription from a year ago and have not renewed it?

A: If the prescription is for a drug which tests positive, and the valid prescription is in your name, the prescription will be acceptable for establishing a legal basis for the drug.

Q: Will I be treated like anyone else who tests positive?

A: Yes, if you cannot provide a legal prescription for a drug for which you test positive.

Q: Should I bring my prescription drugs with me every day, in case today is the day I get tested?

A: No, you do not have to bring in your prescription drugs with you each day. You will have the opportunity to indicate any medication use before you take the test and following any positive result reported from the laboratory.

Q: How is Motorola going to verify a prescription?

A: The Medical Review Officer will contact your doctor or pharmacist.

Q: How will I know what type of drugs I may have received under surgery?

A: The Medical Review Officer will contact your doctor.

OTHER TESTS / INVESTIGATIONS

Q: Besides drug testing, what other ways will be used to find drugs?

A: Motorola will investigate reported violations of the Drug-Free Policy.

Q: What happens if I am caught with drugs or under the influence of drugs?

A: Current Motorola policy already states that you will be immediately terminated for the manufacture, possession, sale or distribution of drugs. If you are found to be under the influence of drugs on the job, your employment will be terminated. The same conditions apply as the current policy on "for cause" testing.

Q: Will Motorola search my personal property?

A: Motorola does not plan to search you personal property without your consent. However, your locker or desk, for example, is the property of the company and may be searched.

Q: Does Motorola have undercover police to monitor drug use?

A: No. But, in some cases, undercover police have been called in to assist with an investigation.

Q: What if my supervisor suspects that I am using drugs?

A: No individual supervisor can make that determination alone. In order to make a determination to test for suspected drug use, two or more supervisors, managers, nurses or Personnel professionals, in any combination, must have a reasonable suspicion to believe you are under the influence or have been using drugs on the premises.

LEGALITY

Q: Is Motorola's drug-free policy legal?

A: Yes. Actions by private employers are generally not subject to review under the U.S. Constitution and Bill of Rights because no government action is involved. Therefore, any challenges to Motorola's Drug-Free Policy will be measured against protections extended private sector employees by lawmakers at the state and local levels and by the courts. Those entities have imposed few restraints on employers such as Motorola, permitting them considerable latitude in prescribing the terms and conditions of employment.

Deterring illegal drug use through drug-testing programs has been held to be a lawful exercise of a private employer's ability to set work place safety, productivity and integrity standards.

Some states and cities have passed legislation which regulates the method and circumstances under which employers may test. Motorola's testing programs will comply with those laws.

Q: Doesn't drug testing constitute an invasion of my privacy?

A: Deterring illegal drug use through drug testing has been held by courts to be a lawful exercise of a private employer's ability to set work place safety, productivity and integrity standards. Motorola is taking steps to minimize and protect all employees' right of privacy, as opposed to invading your right to privacy.

EMPLOYEE ASSISTANCE PROGRAM

Q: Can I voluntarily enter a drug rehabilitation program before being tested?

A: Yes, the Employee Assistance Program will conduct an assessment, make a referral to a qualified professional and follow-up to ensure satisfactory treatment.

Q: Who provides these services?

A: Motorola's Employee Assistance Program is staffed by qualified professionals who are certified in the addictions and employee assistance fields.

Q: How can I reach the Employee Assistance Program at my site?

A: You can call your nearest Employee Assistance Program number:

Austin 512/928-7744
Mansfield 617/364-2000

Mesa 602/898-5392
Phoenix 602/244-6067
Schaumburg 708/576-0493
Scottsdale 602/994-6666
South Florida 305/475-6420

Q: What if I have a positive drug test result? Do I have to go to the Employee Assistance Program or can I go to my own physician / counselor / self-help group?

A: You will be referred to the Employee Assistance Program for consultation and assessment. Your counselor will work with you to develop an appropriate and agreed-upon action plan, which may include the use of your own physician, counselor or self-help group. You must successfully complete all phases of the Employee Assistance Program action plan.

Q: Will the results of my Employee Assistance Program be confidential if I am required to attend because of a positive test result?

A: The results of the rehabilitation are confidential. Your cooperation and participation in fulfilling the Employee Assistance Program action plan will be shared with the appropriate management, in accordance with Motorola policy and as required or permitted by law.

Q: Will I have to miss work to attend?

A: In most cases, you will meet with the Employee Assistance staff during work hours.

Q: Does the new drug policy require the Employee Assistance Program to report my drug use if I voluntarily go in for counseling?

A: No. If you voluntarily seek help from the Employee Assistance Program, this information is confidential.

Q: If I am notified to report for a drug test but voluntarily contact the Employee Assistance Program before the test, must I still take the test?

A: Yes. Enrollment in Employee Assistance Program has no bearing on the requirement to report for a test when notified to do so.

EMPLOYEE ASSISTANCE PROGRAM

Q: If I am applying for a security clearance or already have one, will voluntary participation in the Employee Assistance Program affect my security clearance?

A: If you already have a clearance and have or will voluntarily use the services of the Employee Assistance Program, your drug use will not be reportable to the government under the reporting requirements as adverse information. But, if the company knows that you have a drug problem prior to your admission to Employee Assistance Program, it is

required to report this information as adverse information.

Q: If Motorola tells me to get treatment, and my insurance won't pay for all or part of the bill, who pays the rest?

A: You are responsible for choosing the type of medical coverage you want -- either the Motorola Medical Plan or an HMO, where offered. You are responsible for the payment of any cost not covered by your medical coverage. HMOs generally have limited coverage for chemical dependency treatment.

Q: If I am a voluntary participant in the Employee Assistance Program and then test positive in universal testing, is that considered my second positive?

A: No. It is considered a first-time positive.

Q: If I am in the Employee Assistance Program as a results of a first-time positive, and then test positive again in universal testing, is that considered my second positive?

A: yes.

CONTRACT AND TEMPORARY EMPLOYEES

Q: If I am a contractor, who will pay for my testing?

A: You will be responsible for covering the expenses of the test.

Q: Will temporary summer help be required to take this test?

A: Yes. You will take the applicant drug test which is administered to all temporary employees.

Q: If I take the test in 1990 as a contractor and then leave for a year and come back in 1991, will I have to take the test again?

A: When you come back to Motorola as an employee or contract employee you will be required to meet the requirements of the drug-free policy (as an employee) or the requirements of the agreement or contract (as a contract employee).

If a DJ-180 is anything like the DJ-580, it's a good starter rig.

I bought one about a year ago as MY starter rig, after being off the
air for 30 years. I take it mountaintopping in Vermont, and
I pack it in my briefcase on business trips. It's great!

The rubber duck antenna is not too great, but I carry a J-pole which
helps a lot.

The public service coverage is as good as on my fixed scanner. Especially
useful is the weather band at 162.xxx.

I also like to listen in on the Logan Tower when I'm sitting out there
waiting for my flight...in dense fog...going nowhere....

Oh dear me! I will NEVER EVER again get on an airline. Apparently as little a few milliwatts of RF at the wrong frequency will cause the plane to plunge flaming into the ground.

On board a typical commercial airline there are several radios covering a wide spectrum from HF on up to SHF. All of the manufacturers are aware of the environment they have to operate in. Airlines certainly would not want the liability of operating susceptable navagation equipment or performing "instrument only" flight if they weren't VERY sure of the reliabilty.

When an aircraft heads west out of Los Angeles International, it heads right over Mt. Wilson.

Several hundred kilowatts of RF spread from DC to Daylight(tm).

Interesting to note that Mt. Wilson is not pockmarked with the craters of several thousand airplanes.

Denver Colorado has a similar situation with their commercial broadcasting site vs the airport. And it too seems remarkably unscathed as well.

How about that new windsheer radar. Several megawatts at 450 MHz straight up into the atmosphere. Boy howdy, that should be able to knock a plane clear out of the water (figuratively speaking of course) at 20,000 feet!

Now, I can understand the airlines wanting to cover themselves from a liability standpoint but not coming right out and stating, "We feel our airplanes are safe, see if you CAN knock it out of the air." I wouldn't want to encourage it either. I can also see the FAA (and others) taking a similarly preemptive stance. Especially since nowadays, it appears that people can sue the governemt for allowing mountain lions to live in the wilderness. (And win!)

I wonder how long before the pre-flight announcement includes removing any stray gravitrons so as not to mess with the altimeter. (Insert dumb smiley face emoticon here for the humor impaired.)

Hi all,

My girlfriend is trying to get a research paper on ham radio. If
you could e-Mail her at butler@merlin.etsu.edu or myself, we would
really appreciate it. The question are:

What do you think about the no-code tech?
Why are people interested in Dxing?
What is better for dxing: code or voice? Why?
What is good about VHF AND UHF? how does repeaters work
and why are they used?
What is the difference between HF & U/VHF?

I have answered her questions but she needs more people to
interview. If you could mail your responces before Next
Tuesday (12th) We would greatly appreciate i9t.

73, Mark

>within 1 KHz, there is plenty of room in the CW bands. That is one
>of their attractions. During a contest, I would agree - even with a
>juicy call you may have to go 50-60 KHz up to find a clear spot, but
>in non-contest times, stations are not close enough to prevent anyone
>from calling CQ and starting a QSO without bothering others.

I imagine if I had on of dem fancy new rigs I could do as you say but
the fact is I have a old Swan 700 whose front end is a bit wide to say the
least. I actually find more room in the phone bands then I do in the
CW bands. I don't like to be near a loud CW signal nor would I want to
cause possible QRM to another station.

>If the bands were indeed that crowded, why would you want to call CQ
>anyway? There would be enough activity for you to choose people to
>work without wasting energy and electricity calling CQ.

Well considering that I want to work someone and everyone else is in
a QSO that kinda makes me want to call CQ. It seems every time I wait
for someone to finish a QSO they always seem to being ragchewing and going
on and on (sorry anti-CW types we do ragchew). Murphy's law I guess. 8-)
Then again I love the way the lights dim in my room in time to my
CQ DX CQ DX. 8-)

Not really. I believe this is what dried up the source of nice HT-220
boards that Spectronics used to sell for $20 or so.

I used to see a fellow ham buying up Moto stuff at the local flea markets;
control heads, cables, channel units, anything he could get his hands on.
He was in the commercial 2-way radio business. I always wondered what he
did with all that stuff. :^)

If I know that changing byte 3, bit 6, from a 0 to a 1 enables full-band
receive on a Motorola radio, and a local public-works department hires
me to modify their radios, I still fail to understand how this is a
"crime".

Sorry, but for all your claims of "Its a crime! Its a crime!", I've yet
to see one solid, well reasoned explanation of why Motorola radios are
viewed somehow "different" with regard to copyright laws than other
instruments, such as books. You have failed to provide any
evidence that any modifications I would make are "criminal", since
clearly, copyright laws indicate that I am free to make changes to
a copyrighted item for my own use. Furthermore, copyright law
does not prohibit me from making taking my modifications and
publishing them for other people to use, nor does copyright law
prevent me from taking other people's copies and making my
changes, if they want me to.

Since I've never owned a Motorola radio, I don't know how the
purchasing agreement is handled. If Motorola were to "license"
their radios to me, and in that license agreement it said that I
can only have Motorola modify the radio, if I had it modified,
then I would be in violation of the license. The person who made
the modification would in no way be a party to what is clearly a
civil matter.

The point about "copyright" is irrelevant, because, as people have
already said, 3rd party modification of Motorola radios is perfectly
legal and does not violate any "copyright" restrictions.

Quite frankly, Motorola's position is complete bullshit. It appears
to me that Motorola is attempting to enforce some form of
"licensing" system through copyright laws, and that's not what copyright
were intended for. Furthermore, it appears that Motorola is attempting
to redefine a civil matter as a criminal act.

And Bruce, instead of simply spouting the party line in the group, you
may actually want to take some classes on copyright law and learn something
about that which you purport to speak.

.....the rest removed for sake of brevity

So is this to say that if the companies now selling radios modifiable
for extended rx/tx decided that they would sell versions of their radios
with the jumpers/diodes removed for a few more dollars/yen that those of
us that took it upon ourselves to make that particular modification
would be stealing from those companies?

Is it the fact that the company would like to squeeze as much revenue
out of one design that makes it a "crime"?

Is patent/copyright issue? If so, I bought the device and now own
its contents. I can delete or add "things" to my heart's content
as long as I stay within emission regulations, etc. As stated
by others previously I am not propagating technology Motorola sold
me; I am only modifying it for my personal use.

Is it a ethics issue? Maybe. Would this revolve around whether or
not the company in question wanted to charge more for the function?
Auto manufacturers sell cars equipped with stereo systems, albeit
not generally meant for the audiophile. If you purchase a car without
the stereo and install one yourself (or better yet build your own!!!),
are you stealing from the auto maker?

A few weeks ago, this story was being forwarded widely around the Internet and was supposedly from the San Jose, CA police. Allegedly, gangs in the San Jose area were doing the same thing.

Someone finally phoned the San Jose police to verify this, and it turned out to be false. The San Jose police were aware of the rumor, but claimed not to be aware of any actual occurances of this, and said that they had certainly not circulated the information themselves.

So...I'm not saying it's not true...but there is some question about it, so before you forward this to anyone else, you may want to verify the information with the Illinois State Police.

So does this prohibit a third party company from writting and distributing (for profit) their own alternative rom chips?

My understanding is that only in the most exceedingly rare circumstances will the government ever grant a patent for software. (Actually I am not sure that I know of any examples.)

Granted this would put a damper on piracy -- if such companies had to write the whole thing from scratch -- but then some of them probably could, perhaps with even more and better features than previously thought possible.

It has been awhile since this thread has passed around and the last time,
I don't think anyone answered this question to my satisfaction.

The ARRL recommends the Molex 1545-series connector (last discussed
QST 8/93 p. 50)

My question is why? While fine for HT's, the current ratings on the Molex
aren't quite up to the needs of a 100W class HF transciever. The article
in QST didn't explain the design decisions which caused the ARRL to decide
upon upon the Molex connectors. What were the disadvantages of other common
connectors (e.g. Jones) and what were the advantages of the Molex?

Message-ID: <93280.172422JMEAKER@UCF1VM.BITNET>
Source record: 275287

I'm looking for any information available about an Indian earthquake relief net. There are several Indian students here at the University of Central Florida who are raising money for earthquake relief. The question is how to best apply the funds raised.

If there is an active net, what times and frequencies does it meet? If there is no net, how can a station in the stricken area be contacted? Is there a third party agreement with India, and if so what communications are permitted? That is, would a "laundry list" of needed supplies be appropriate under these circumstances?

Any help would be appreciated.

Thanks,
John Meaker, KR4AH

Source record: 275426

I have been watching this discussion with a bit of amusement. Vendors of radio related products have been buying license info from the FCC for years and using it for their mailings, this is not something that started with the VEC system. Many hams (and, in the old days when CB was licensed, CBers) first found out their new call signs by the mailing labels on advertisements for QSL cards, log books, etc.

While the ARRL may be collecting addresses for potential new member mailings, and may even be selling (or more likely renting) these lists to others, it is more likely the bulk of the mailers come from people using the FCC database. It's cheap (as mailing list costs go), they get to keep the data, and it's complete from one source.

Mailing lists developed from public information are BIG business. That's why I get mailers advising me my homeowners policy is about to expire from competitive insurers, or "notices regarding my mortgage from XYZ Homeloan, Inc." from those who feel their rates are lower, or my favorite: "our records show that. . . ". New home buyers get official looking letters offering to file for homestead on their behalf, new parents get official looking letters offering to process the required paperwork for Jrs. social security number for a "small service fee", the list goes on and on (as have I). Of course, I don't do business with anyone who buys public records and then uses them as implicit or explicit misrepresentation. :-)

My .02 on mailing lists.

Scott-

There is no doubt that a lower-loss resonator might make some improvement in the Hustler. I've heard comments to the effect that the 75 and 40 meter resonators actually get warm to the touch, after heavy use.

However, I disagree that there could be a "much more efficient antenna design" of the same physical size, unless the lower mast were to be a longer portion of the total antenna length. Radiation occurs when current flows in a conductor. In the typical Hustler vertical whip configuration, the majority of the radiation occurs in the portion of the antenna between the feedpoint and the resonator, where the current is at its highest.

For practical purposes, the resonator only serves to make the antenna match the feedline. Although some current does flow in the whip above the resonator, it is at best, the same amount of current that would flow in the same length at the top of a full quarter wave vertical. That top segment supplies a nearly insignificant percentage of the total amount of energy radiated.

Yes, you probably could measure the improvement by using a higher-Q resonator. However, you would also find the bandwidth to be reduced. On 75 meters, my Hustler only allows full power from my TS-50, over about a 20 KHz spread. I'm not sure I could stand a much "better" resonator!

But you just reminded me of somthing ....

On 10 mtrs, I was sort-of in contact with a guy who had so heavy an accent
I could not make out half what he was saying.
I had NO idea where he was, except that he was within range of me!
Going by what I think he said, I think he also had a time of it with me.
My 'accent' (to him) probably made me just as clear.

When he said, that he also did CW, I said to myself...ah HA! there we can
get around his (and my) accent!

So I yank out the offending micro phone, and plug in the key....
Twiddle my knobs and dials to get tuned up for CW, and line up so no
matter where he xmitted, I'd hear him. (off sets on some sets don't always
land you where you can be heard!)

He did the same thing....but he had an electro-bug key and I guess he was
not used to it or somthing....
...it kept adding extra di's and da's all over the place.

Thus, he was STILL just as unreadable!

heh...somtimes ya can't win.

Here is some data from the bumph Rayovac sent me:

Amphour ratings:

D Cell 5.5 C Cell 2.8 AA Cell 1.5
Note the rating will fall though the life of the cell.

High Current: (Milli Amperes)

D Cell 545 C Cell 308 AA Cell 308

Note: These cells should pull higher current, these are numbers from
their sheets. My understanding is that these cells have the same
characteristics as regular Alkalines execept the rechargeable
feature.

For more info call Rayovac for data sheets.

3264. AURORA OPENING OCT 9/10 (!!!!)

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-08 01:34:57 UTC
From: chbeck@anl.gov
Message-ID: <chbeck-071093205017@chbmac01.el.anl.gov>
Source record: 275291

Attention VHF/UHF hams! Looks like there might be some AURORA openings
on the bands this weekend! Remember last month, during the VHF contest we
had a spectacular opening that lasted for a few hours! Well, it's coming
back,
and it may be better than last time!

Lets all get on the bands oct 9, and 10 or so and get me some new grid
squares!

I will be listening on 144.200 and the CW portion for openings- It was so
good last month, it should be great again.

BTW: I got this from a finger to "aurora@xi.uleth.ca".

Anyone interested in this type of data?

==========

S.T.D. HOURLY AURORAL ACTIVITY STATUS REPORT

==========

Reports of auroral activity are made available hourly at 30 minutes
past
each hour between 22:30 UTC and 17:30 UTC daily. Auroral activity
watches and warnings are updated as needed.

CURRENT CONDITIONS AND SYNOPTICAL INFORMATION

0118Z / 07 OCTOBER AURORAL ACTIVITY SYNOPSIS:

Auroral activity was sporadically active over the high latitude
regions today. No activity was observed from the middle
latitudes. Conditions are expected to remain relatively quiet

until 09 October. A potentially strong disturbance is expected
to arrive on 09 or (preferentially on) 10 October that has a
fairly high probability of producing activity energetic enough to
be observed from the middle latitude regions. A warning for
possible activity may be issued over the next 24 hours in
response to this disturbance. This same disturbance produced a
strong auroral storm last month. The coronal hole which spawned
the activity appears to have become wider. As a result, the
resulting activity could be as severe as last months'
disturbance, and may last approximately one day longer.

Predicted 3-Day Auroral Indices (07 Oct to 09 Oct): 9, 10, 17.
(For input into the Auroral Simulation Software)

AURORAL ACTIVITY SIGHTINGS AS OF 0015 UTC

(Sightings reported between 2230 UTC and 1730 UTC daily)

No sightings reported as of this hour.

I thought they did. Very simple really. The Molex connectors
meet the Macassey criteria for component selection:

"Can you get the parts at any Radio Shack?"

The other thing is they are cheap, easy to use and pretty
foolproof.

I have been using these connectors for years for the above
reasons.

I recently purchased this unit, and it is great.

To modify, just snip the red wire (looped) and reset the radio to enjoy an extended receive. Then snip the blue wire and reset the radio to enjoy an EXTENDED receive (you will get 810-998.99) plus transmit from 130-174, 430-480 (you can transmit above 480, but it does not work too well).

I only have a question for those who do own it:
If you put the unit into the FL (lock) mode and press #123, you get these weird codes. Does anyone know any other interesting numbers besides #123 and #508?? Thanks.

Well Bruce that was awful nice of Motorola to be so generous as to allow competition in the market place. Because you have taken Motorola's side in this issue, it seems to be apparent either you work for the company or hold stock in it. I guess what bothers other people and myself is the fact that Motorola has to take out advertisements making veiled threats toward the consumers. I own a Motorola Cellular phone, and as a customer did not like the threat of legal action if I have anyone other than Motorola perform any work on it.

As far as another post is concerned, the one made by the Paramedic, this is a situation I can relate to. When I first purchased my cellular phone the Sears store where I bought it could not answer my questions as to certain features, they in turn refered me to Motorola. After dialing several phones numbers given to me by Sears and the Motorola people whom did not know why I instructed to call them as their job was not in customer relations, I reached a very rude male "technician" who indicated I should read my manual and not to bother them with such trivia.

> I would like to know if such crystals are available, and from where.

Try Jan Crystals in Florida. They have an 800 number that I don't have handy;
call 800 information (1-800-555-1212) for their number.

> Is there a special type of crystal that should be used, or will the seller
> know from the radio model number? Also, when I install these crystals

Jan will recognize the radio type and send the right crystals for your radio
you do need to tell them what frequency you want to receive.

Don't forget most repeaters are +600 or -600 from the frequency you receive on
so you need diferent transmit and receive frequencies.

i.e., 146.940 MHz receive, 146.340 MHz transmit

Some repeaters have odd ball splits; check with your local hams
before you order.

> do I need to adjust the little trimmer next to the socket I put the crystal
> in? How do I do this (what tools are needed, aside from a screwdriver)?
> I do not have the owners manual, or any other documentation.
>

Yes you do. For the transmitter you will need a frequency counter to
get it on frequency. For the receiver trimmer (if there is one)
just adjust it until the received signal is the clearest.

> Hopefully I'll get something a little more modern at the end of this
> month during our local annual swap meet :-) Meanwhile, I still have to
> make a first contact...

IMPORTANT NOTE: Your radio is about 15 years old, maybe older. When FM
repeaters first started in the late 60s, the repeater spacing was
60 KHz. (146.94 was OK, 146.91 was not OK). Over the years,

the spacing was reduced to 30 KHz and then 15 Khz (20 in some parts
of the country). You radio is old enough that it may have a wide
band IF filter at 455 KHz. If that is true you will have to replace
the filter with one appropriate for 15 KHz channels. The filter
is made by Murata (now Murata Eire) and can be replaced. The filter
should have the number 455 and a letter after it. An E or F filter
needs to be replaced. I don't have a catalog handy but I think
a D filter is OK.

Good Luck

I have had my license for one month now and have not received one piece of
mail that could conceivably have come from lists sold by the ARRL or the
FCC. From the discussions here, I half expected the catalogs/etc to hit
my mailbox within two weeks of receiving my license. I am actually a
little disappointed. What really surprises me is that I haven't gotten
a memberscription (!) offer from the ARRL.

I have a suggestion for those who have opened up transmit on the DJ-580
and other radios. Rather than risking accidental xmit on the public service
frequencies that you may have programmed, set a non-standard offset that
falls either in the amateur bands or in relatively unused bands. The 580
allows up to a 15 Mhz offset - so this is quite easy. If I accidentally
xmit, I'd rather radiate on an amateur band than on the local sherrif
or rescue frequency. Just a thought...

BTW - Don't bother flaming me for opening up my xmit. The amateur SERVICE
is expected to be prepared for emergencies...

Additionally, it would seem that they are trying to create confusion and uncertainty about any aspect of messing with their equipment - and judging by the widely varying interpretations posted here, they've done a very good job. Sowing uncertainty can certainly be an effective deterrent...

>because we want to move them into Amateur bands....

Yes, when there are cell phones being sold in Metro Toronto for UNDER
$50 (ok, there are some limitations on that deal, like you have to sign
up for 6 months of cell phone service, still...) it is tempting to ask
the question how hard would it be adapt a cell phone to the ham 902-928
MHz band. Given the costs, it is a tempting thought.

Here we are not interested in depriving ANYONE of any service. We are not interested in defrauding anyone of anything. Type acceptance is not an issue, as individual hams it is our individual problem to make sure this stuff complies after modification.

Other legal issues, a few years ago a large mall in Toronto starting putting red ribbons around the necks of a flock of fiberglass Canada geese that they had in their mall. The artist objected, went to court, and won (the mall was required to remove the ribbons). The court took the view that the ribbons hurt the reputation of the artist. I would have a GREAT deal of trouble picturing Motorola being described as an artist, for a cell phone, still .... If one were to replace the ROM with one that has no Motorola code in it, and put the phone in a non-Motorola case, I can't picture them getting anyone even on artistic grounds.

From the ARRL:

>SB QST ARL ARLB103
>ARLB103 Station location dropped
>
>Station location dropped
>
>Effective November 15, 1993, the FCC will no longer require that a
>station location be shown on amateur license applications, nor on
>applications for reciprocal operating permits.

[skipping ahead]

>The amended FCC Rule ''Section 97.21 Mailing Address'' will be:
>
>''Each application for an amateur service license and each
>application for a reciprocal permit for alien amateur licensee must
>show a mailing address in an area where the amateur service is
>regulated by the FCC. The mailing address must be one where the
>licensee can receive mail delivery by the United States Postal
>Service.''

I thought they did this months ago. My latest license issued in May
'93 doesn't list a station address, and I had heard reports about that
several months previously.

What gives?

I agree wholeheartly. There is no excuse for someone to steal software
and then "sell" modifications using it.

However, if I were to develop my own programming software, and were to offer
"reprogramming" services for Motorola radios, legally I cannot see any
problem.

If the intent of the ad were to address the problem as you indicate, then
I think Motorola ought to fire its advertising agency and find one that
knows how to communicate a message.

They're available at Radio Shaft and they don't fall apart like
Cinch Jones connectors. Other than that, they have no saving
graces.

I prefer the hermaphrodite Andersen Power Pole connectors for all
my DC work. They're available in ratings up to 200 amps, or as
little as 15 amps. They're available in colors. They lock. And
they work. You don't care which end of the cable you grab since
any connector will plug together with any other of the same amp
rating. Available from Newark and other large distributors.

I have been able to use a sound blaster -pro, programmed with DMA to easily
handle 10Kbps FSK modulated FM, on a 486DX/50.

While the code is parsing through the waveforms, the DMA is prepping the
next batch for you in background....

I am VERY interested in anyone who has software to do this with a soundblaster.
The code I wrote is only for a specific limited application.

>
>How popular is this band, these days? Is it extremely hard to
>pick signals out of the intense atmospheric noise?

Top band isn't as popular as other HF bands because you really need
an effective groundplane to take best advantage of it. Propagation
is similar to the top end of the Standard Broadcast band. You get
good groundwave out to about 40 miles in the daytime, and often out
to 100 miles at night. Skywave propagation is often good out to
distances of 1500 miles, and under exceptional conditions out to
3000+ miles. As WHO says, "From border to border, coast to coast,
and then some."

The summer static is fierce. The band is best toward dawn, and in
winter, when the atmosphere is quieter. Transmit antennas are
usually .25 to .6 wave vertical towers. Receive antennas are often
switchable arrays of Beverages, and sometimes shielded loops for
the property challenged.

3283. idea for ground radials

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-08 13:27:33 UTC
From: ginsburg@wellfleet.COM
Message-ID: <9310081327.AA08076@wa2cjt.wellfleet>
Source record: 275319

Has anyone tried the following idea for installing ground radials for an HF vertical: get some multi-conductor rotor cable, and make cuts that would result in each conductor being 1/4 wavelength on a single band. For example, if you wanted radials for 40, 30, 20, 15 and 10, start with a piece of 5-conductor cable of length 34', and make 4 cuts stripping away the unneeded wire. The cable after being chopped up would look something like:

```
---------------------------------- 34'
---------------------- 23'
---------------- 16'
----------- 11'
-------- 8'
```

Is this a reasonable idea? Has anyone out there tried this?

Thanks and 73,
Scott, WA2CJT

>aren't quite up to the needs of a 100W class HF transciever. The article

<stuff deleted>

Just for the record, HF use was not envisioned:

In the issue of "ARRL Field Forum" it stated:

"As a result of a study commissioned by the League's Volunteer
Resources Committee last year, the Field Services department is
recommending the MOLEX Series 1545 connector for use in
promoting compatibility and interchangeability among personal
VHF/UHF radio equipment at disaster and public event sites.
Polarity should always be verified prior to connecting radios
and power supplies."

"The 1545 connector is rated at 25 volts, 8 amps. Wire size
requirement is #18 AWG or greater. An in-line fuse between
the power source and the first connector is recommended. The
connector is available at Radio Shack stores, part #274-222."

Personally, I hope we don't have to go through the whole
debate again.

Cheers & 73 Ed Humphries N5RCK

3286. Special event station Oct 21-24

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-08 14:20:24 UTC
From: sas@opus.xyplex.COM
Message-ID: <9310081420.AA06651@opus.xyplex.com>
Source record: 275317

There will be an amateur radio special event station at the
46th National Girl Scout Convention in Minneapolis, Minnesota
from October 21 to 24, 1993. This is the first time there has
ever been an amateur station at the Girl Scout convention so
they are anxious to work a lot of stations!

The group will use the call N0OYL and will operate SSB only
on or near these frequencies: 3925, 7260, 14300, and 21350.

N0OYL will be on the air during convention hours:

Thursday, Oct 21 1700 - 2100 UTC
Friday, Oct 22 1300 - 1700 UTC
2100 - 2400 UTC
Saturday, Oct 23 1200 - 1300 UTC
1600 - 1800 UTC
2130 - 2400 UTC
Sunday, Oct 24 1400 - 1700 UTC

The group of about 20 operators has been organized by Arline N1OMA.
Arline's effort has been supported by the ARRL, but Arline has been
left to bear some of the convention costs herself. I'm sure she'd
appreciate a couple of bucks when you QSL the group. If you need any
more info on this, contact Arline at her call book address.

Message-ID: <8OCT199310260871@zeus.tamu.edu>
Source record: 275311

This model has been out for a few months now, and I suspect someone out there has been fiddling. I would like extended tx. The AM air-band receive is jumper 5 I believe (AM didn't come activated on some early units). I know how to access the jumpers, but I don't know their functions.

BTW, the little buggers [jumpers] are surface-mount sized and require a needle tipped [and grounded] soldering iron to safely change their state.

There are 12 pairs of jumper solder pads. On my stock unit (AM deactivated) only jumper 5 was inserted (all other pairs open). The jump was made with what looked to be a surface-mount resistor. I assume it is a zero-ohm unit.

Any advice would be appreciated!!!

CONFIDENCE LEVEL: 70%

NOTES:
Predicted geomagnetic activity is based heavily on recurrent
phenomena. Transient energetic solar events cannot be predicted reliably over
periods in excess of several days. Hence, there may be some deviations from
the predictions due to the unpredictable transient solar component.

GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX

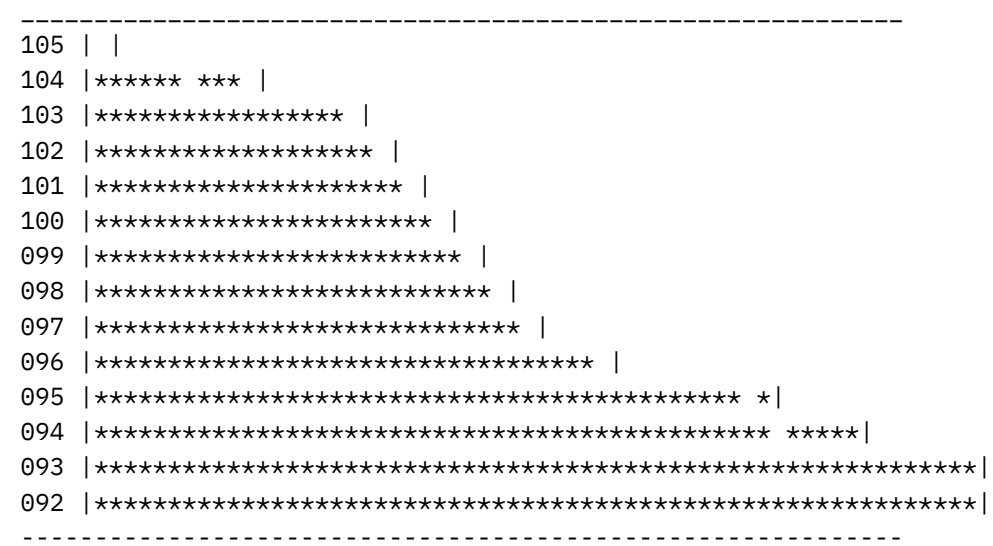

Chart Start: Day #221

NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

CUMULATIVE GRAPHICAL CHART OF SUNSPOT NUMBERS

3290. Re: Standards in 12V power cords.

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-08 15:42:15 UTC
From: gregt@col.hp.com
Message-ID: <2941on$t3g@hp-col.col.hp.com>
Source record: 275313

The disadvantage of the Jones plug is primarily the cost. They are
also harder to use as they require disassembly, soldering, and reassembly.
My HF rig uses one, though.

I've been using the Molex connectors for about 15 years or so and
find them to be really convenient, inexpensive and reliable. I use the
Molex on all my 2M and portable gear, including a Yeasu FT-7 and battery
packs.

TIP: If you ever need to re-use the Molex plastic shell, you can go to
your local hobby shop and purchase a small length of brass tubing to use
as a pin extractor.
Bring the male and female pins with you to size up the brass tube -
I don't remember what inside diameter is needed. The tubing should be
an almost snug fit over the pin to be able to compress the two clips on
the side of the connector pin.

MIDDLE LATITUDE AURORAL ACTIVITY WARNING

WARNING ISSUED: 14:10 UT, 08 OCTOBER

/\

VALID UNTIL: 19:00 UTC ON 12 OCTOBER

HIGH RISK PERIOD: 10 Oct - 11 Oct (UT days)
MODERATE RISK PERIOD: 09 Oct - 12 Oct

PREDICTED ACTIVITY INDICES FOR NEXT 4 DAYS: 20, 60, 35, 23, 15 (09 - 13 OCT)
(INPUT INTO THE AURORAL SIMULATION SOFTWARE *)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: MODERATE - HIGH

POTENTIAL DURATION OF THIS ACTIVITY: 48 TO 72 HOURS

POTENTIAL LUNAR INTERFERENCE: LOW

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: GOOD - VERY GOOD

APPROXIMATE OPTIMUM OBSERVING CONDITIONS (LOCAL TIME): NEAR LOCAL MIDNIGHT

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

OREGON TO SOUTH-CENTRAL IDAHO TO WYOMING TO NORTHERN NEBRASKA TO
SOUTHERN IOWA TO CENTRAL ILLINOIS TO CENTRAL INDIANA TO OHIO TO
PENNSYLVANIA TO NEW JERSEY AND POSSIBLY PARTS OF DELAWARE. THERE
IS ALSO A CHANCE POINTS SOUTH OF THIS LINE MAY ALSO SPOT PERIODS OF
ACTIVITY.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

THE U.K. TO EXTREME NORTHERN FRANCE TO BELGIUM TO NORTHERN GERMANY TO
SOUTHERN SWEDEN TO SOUTHERN FINLAND TO NORTHERN RUSSIA. EXTREME
SOUTHERN REGIONS OF AUSTRALIA AND NEW ZEALAND MAY ALSO BE ABLE TO
SPOT ACTIVITY DURING THE WARNING PERIOD.

* Contact: Oler@Rho.Uleth.CA or COler@Solar.Stanford.Edu for more information
regarding the Auroral Activity Prediction and Simulation Software.

SYNOPSIS...

A large and recurrent solar coronal hole is expected to produce a
high-speed solar wind stream that will sweep past the Earth from
approximately 10 to 12 October. This same disturbance produced a major
auroral storm last month. Analysis of the coronal hole shows that it

has expanded in area toward the solar equatorial regions, suggesting the disturbance may last a bit longer than was observed last month. Confidence levels are fairly high that this disturbance will be about as severe as was observed last month. Periods of intense auroral activity are expected to accompany this disturbance, with strong levels of activity observable from the middle latitude regions. The waning moon will not significantly hamper attempts to view activity, particularly prior to approximately 1:30 am local time when the moon should begin rising.

For those with our Auroral Oval Simulation Software, optimal input values of between 40 and 60 should be used on 10 October. Use the Internet command: "finger aurora@xi.uleth.ca" to obtain current forecast values and synoptical information.

This warning will remain active until 19:00 UT on 12 October when it will either be updated or allowed to expire.

** End of Warning **

> Radio Shack SWR meters

I borrowed one, then bought one at a swap meet, then just last night got my MFJ 949E antenna tuner. They have all been giving me approximately the same SWR readings. The first one was rated to 30 watts, second one to 300 watts, and MFJ is 300 watts. Of course borrowing is cheapest, $2 at swap meet was not a bad investment, and the MFJ was $140 but has tuning features, etc. If what you need is a simple SWR checker and don't plan to get a tuner in the near future, the Radio Shack will do the job. Frequencies from 3 to 30 Mhz. Not accurate with 2M radios, but will still give relative indications. I'm not sure which part numbers you are referring to, but mine was the $19.95 variety.

Opinions, thoughts, &cetera are my own and not representative of Evans & Sutherland.

Does this imply that Ron Raikes has been violating Copyright laws all these years by distributing Net/Rom EPROMs for TNC-2 clones and the AEA PK-87/88s?

What about the HostMode firmware he wrote to replace the EPROMS in the above?

Just a thought....

[An typically deranged rave against Motorola radios deleted]

Well no wonder you couldn't get the radios to work, you had the wrong hat on. Go back and put on your radio hat.

Could they get your business back if they used Morse rather than FM?

> DJ-180 as a starter rig.

I bought my DJ-180T about 3 months ago and really like it. It has good audio, easily memorized controls, and sufficient features to make it useful for my purposes. Indeed, I plan to keep it as my primary HT, not just a starter rig. Two of my sons have passed the no-code tech, and I plan to give them each a DJ-180T for Christmas (either that or I will never be able to find mine when I need it).

The stock battery in the box is a 7.2V 700mah nicad. This will allow only a max of two watts output on high power, but has been sufficient on my local repeaters. I did purchase an adapter so I can hook into the cigarette lighter, a power supply, or another battery pack at 12 volts and get the full 5 watts output. Also got a soft case. I would like to have gotten a 12 volt battery pack with the standard package, but I guess that would have raised the price. The larger pack will necesitate using the larger case too. My recommendation, is to buy a 2nd battery pack same size as the first, the DC adapter, regular size case, and just have fun. I hook mine up to a J-pole when in my shack at home. Try Ross Distributors in Preston, ID. $199 plus shipping if you send them a check.

I like it!

How about while you are teaching us how to spell 'morse' you take at look in the book for 'debate' and 'centered'. And before you put the dictionary away, you may wish to smack the CAPSLOCK key a few times. It appears to be stuck.

* HAM RADIO TO FLY ON STS-58 *
==============================
The third SAREX (Shuttle Amateur Radio Experiment) flight of 1993 is scheduled for lift-off October 14 aboard the Space Shuttle Columbia on a 13 day mission. Crew members include Pilot Richard A. Searfoss, whose amateur license is pending, Mission Specialist William S. McArthur Jr., KC5ACR, and Payload Specialist Martin J. Fettman, KC5AXA.

Amateur Radio frequencies for the mission include: voice downlink (World-wide) 145.550 MHz, voice uplinks 144.910, 144.930, 144.950, 144.970, 144.990 MHz, voice uplink (Europe only) 144.700, 144.750, 144.800 MHz, and packet uplink: 144.490 MHz.

15 schools are scheduled to participate, in Arkansas, Texas, Ohio, Missouri, Arizona, Tennessee, New Hampshire, Kentucky, Colorado, North Carolina, Indiana, and France.

The 39 degree orbital inclination will bring the shuttle higher over the temperate latitudes of the earth allowing more ground stations to hear the Amateur Radio transmissions from the shuttle and possibly make radio contact with the astronauts themselves.

SAREX configuration 'C' is planned for this mission. This configuration includes FM voice and packet radio operations.

The following are pre-launch Keplerian elements for Shuttle mission STS-58:

* MIR OPERATING HINTS *
==========
This Week: "Logging Out of MIR"

More and more people are trying to use the MIR PBBS these days, and that is fine if we all follow some simple rules.

How many times have you seen a whole MIR pass full of <<DM>> messages (DM-Disconnect mode) with no data, and it appears that no one is logged in? Well, in reality someone IS logged in, but may have gone out of range of MIR and is unable to logout of the MIR PBBS. This results in the PBBS being tied up until the watchdog timer expires and forces a disconnect to the out-of-range station. After 7-10 minutes, MIR will try to force out the missing station with ten (10) <<D>> (D-Disconnect request) packets. After the last <<D>> packet, MIR will accept the next connect request heard.

Rule: If you are connected to the MIR PBBS, make sure you send the BYE command (B) to MIR 2-minutes before LOS. This will prevent ruining a whole pass for the stations down range of your QTH.

Remember, only one station can connect to MIR's PBBS at a time. All others must wait.

Frank, KB2MVN, of Alpaus, New York has set up a packet mailbox which can be accessed by using the LUSAT-OSCAR-19 satellite as a digipeater. Frank's mailbox beacons through the satellite when it is in range of his ground station:

KB2MVN>BEACON,LUSAT-1* <UI>:
KB2MVN MAILBOX OPEN PLEASE CONNECT Via Lusat-1

LO-19 command station LU8DYF reports that the satellite's on-board computer will be reloaded with directory broadcast software soon. Directory broadcast is a feature currently available on PACSAT-OSCAR-16.

* KITSAT-OSCAR-25 NEWS *
==========
SaTReC, KAIST Announces the Launch of KITSAT-OSCAR-25!

The Satellite Technology Research Center (SaTReC) at KAIST, Korea announces the successful launch and activation of a new OSCAR. KITSAT-2 was built in KAIST and is named as KITSAT-OSCAR-25 following the suggestions from the AMSAT group. KO-25 was launched by ariane 40 V59 launcher at 01:45 UTC on 26 September from Kourou Spatial Center of French Guyana. KO-25 was inserted into orbit 23 minutes after launch. KO-25 was activated 12:03 UTC on the same day from the Central Command Groundstation at SaTReC, KAIST.

KO-25 carries five payloads including a CCD Earth Imager, a Store-and-Forward mailer, a Digital Signal Processing Experiment for High Speed Modem tests and research, an Infra Red Sensor Experiment (IREX), a Low energy electron detector (LEED), and also a new computer system called KASCOM (KAIST Satellite Computer) developed for small satellites.

SaTReC sincerely express its gratitude for the help that AMSAT members have given to KAIST during their initial operation. Special thanks to Bill Tynan, Jim White, Harold Price, Jeff Ward, Eric A. Cottrell, Steve Greene, Peter Guezow, R. Campbell, Ron Parise, Tom Clark and those whom were active on the Internet during the development period.

SaTReC congratulates the EYESAT and ITAMSAT teams and the University of Surrey on the launch and activation of their satellites. For further information about SaTReC and the KITSAT-OSCAR-25 payload, please contact SaTReC via:

* FROM THE EDITOR *
==========
Over the past month, I have received a record number of requests from people with Internet addresses asking to be placed on the "SpaceNews mailing list". While such a list does exist, it is used primarily to increase article circulation speed across the world-wide packet radio network. Having geographically diverse entry points into the packet radio network, radio amateurs can receive these bulletins in an acceptable amount of time around the world.

Requests from single individuals who want SpaceNews mailed to them simply to avoid searching through the rec.radio.amateur.misc, sci.space.news, and rec.radio.info newsgroups on Usenet cannot not be accepted. It just takes more time than I have available to maintain a large and growing mailing list.

Please take advantage of the wide circulation SpaceNews currently enjoys through Usenet, amateur packet radio, digital amateur satellites, as well as the Internet (finger magliaco@pilot.njin.net).

* THANKS! *

In article 4636@anomaly.sbs.com, kd1hz@anomaly.sbs.com (Michael P. Deignan) writes:
}In article <1993Oct7.161639.1483@lmpsbbs.comm.mot.com>,
} burke_br@adcae1.comm.mot.com (Bruce Burke Sp App) writes:
}
}|> That should have been more correctly explained as "tamering with it to
}|> make a living/profit from it is a crime." Sorry, Bruce, WB4YUC, el YUCCO. . .
}
}If I know that changing byte 3, bit 6, from a 0 to a 1 enables full-band
}receive on a Motorola radio, and a local public-works department hires
}me to modify their radios, I still fail to understand how this is a
}"crime".

Because you have given the customer something he hasn't paid for and
you are making a living from it.

}
}Sorry, but for all your claims of "Its a crime! Its a crime!", I've yet
}to see one solid, well reasoned explanation of why Motorola radios are
}viewed somehow "different" with regard to copyright laws than other
}instruments, such as books. You have failed to provide any
}evidence that any modifications I would make are "criminal", since
}clearly, copyright laws indicate that I am free to make changes to
}a copyrighted item for my own use. Furthermore, copyright law
}does not prohibit me from making taking my modifications and
}publishing them for other people to use, nor does copyright law
}prevent me from taking other people's copies and making my
}changes, if they want me to.

Yes copyright laws do apply when it comes to altering computer code and
then ytrying to make a living from it. And while we are at it -
every time you sing Happy Birthday, technically you owe someone a royalty
because that somg is copyrighted! As for books, go ahead and pull a chapter out of
one and try to republish it with your name on it and watch what happens!
}
}Since I've never owned a Motorola radio, I don't know how the
}purchasing agreement is handled. If Motorola were to "license"
}their radios to me, and in that license agreement it said that I
}can only have Motorola modify the radio, if I had it modified,
}then I would be in violation of the license. The person who made
}the modification would in no way be a party to what is clearly a
}civil matter.
}
}The point about "copyright" is irrelevant, because, as people have
}already said, 3rd party modification of Motorola radios is perfectly
}legal and does not violate any "copyright" restrictions.

People, which people?? Define modify.... tweaking a circuit is one thing.

Messing with the computer code for profit is another.
}
}
}Quite frankly, Motorola's position is complete bullshit. It appears
}to me that Motorola is attempting to enforce some form of
}"licensing" system through copyright laws, and that's not what copyright
}were intended for. Furthermore, it appears that Motorola is attempting
}to redefine a civil matter as a criminal act.
}
}And Bruce, instead of simply spouting the party line in the group, you
}may actually want to take some classes on copyright law and learn something
}about that which you purport to speak.
}

You are the one who needs to study, you obviously don't understand what the issue is.
There are all kinds of protected items within a radio. Proprietary IC's are one.
So is the competer code which makes the radio what it is. When you buy a radio
that is driven by a micrprocessor and computer code, you are not buying the code
and that is where many people think they know better. You are merely being
licenced to use it. The company still retains ownership of it. Just like
going out and buying sheet music or a book.

As for what side I stand on, that is my business. If you
don't like it, fine, but you can't tell me where to stand on an issue.

Bruce Burke, WB4YUC, el YUCCO. . .

3306. Re: Renewal rechargable alkalines?

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-08 16:50:32 UTC
From: goris@fc.hp.com
Message-ID: <CEL849.Es4@fc.hp.com>
Source record: 275316

I also spoke with Ray-o-Vac, and learned a few more things about the new Renewal batteries.

* They have about 2/3 the capacity of normal alkalines because RayOVac left space inside for gasses & casing (hence more safety margin). This space took away from the space available for electrolyte. The good news is that this makes them a tiny bit lighter than alkalines.

* The capacity drops more quickly after the first few uses, then slowly declines after that.

* The positive electrode is a little bit smaller than a traditional battery to prevent you from putting a normal alkaline in the Renewal charger.

* There are no plans to make a 9V battery (I wanted one for our baby monitor, which goes through 9V batteries like crazy.) Apparantly RayOVac doesn't sell near as many 9V batteries as AAA-D, so the volume just isn't there.

I doubt many amateurs will be building their own chargers - the chargers I saw in Walmart here in Ft. Collins, CO were only $15 and $29. The instructions imply that each battery is charged individually, so you don't have to worry about putting batteries with different charge levels in the charger. Also, the charger is not just a simple current source - there's some smarts inside. However, I don't know exactly what these smarts do.

rossi@VFL.Paramax.COM (Pete Rossi) asks:

>Has anyone ever heard of anyone having a problem [notification from the FCC]
>for not using their temporary upgrade suffix? A friend of mine upgraded to
>Advanced back in the spring and I remember hearing him a few times in the
>Advanced band in DX pileups, etc, and once in a while, in the "heat of battle"
>he forgot his /AA suffix. I am sure it happens but has the FCC ever caught
>anyone? Do they really care?

I would guess that the FCC does not care, and I suspect that this, and worse,
happens a lot. There are plenty of Extra class ops who kept their Novice
calls, and a no-code Tech could operate in the Extra portion of the phone
bands for a long time without being challenged. I know of a novice (or Tech,
I forget) who did the phone Sprint a while back, using an amp on 20/40-80m.

I am not condoning this, but one might say that it is preferable to have
a novice operating properly on 14155 than it is to have an Extra class
operator acting like a lid in the Novice bands. Not that either represents
the Finest in Ham Radio[tm].

Of course, if you are really knuckle-headed, you do what I heard someone
doing - you call CQ in the Extra band with a /AG call. Now *that* is dumb.

[Long long long _long_ irrelevant post deleted]

John, I've seen your posts here on the net for a long time but this one
is really one for the record books. The whole idea of posting it is a
non-sequitor! What are you trying to make us believe, that anyone currently
working for Motorola is mindless therefore their opinions are to be ignored?
As much as I dislike Motorola's policy as presented in your post, there are
no doubt many people at Motorola who also dislike that policy. Just because
you dislike a policy at your company does not compell you to leave the
company; if that were true nobody would keep their job longer than a year.

If you're such a prima donna that you can whine about a policy and get it
changed by threatening to leave if it isn't, you are in the minority. Most
of us don't have that luxury, especially those of us working for large
companies.

The real world is very different from the one in which you seem to be living,
John.

: -------- 8'

Your diagram reminds me of ribbon cable...I wonder if you could do something like this with ribbon cable? You could easilly cut off individual conductors. What are the wire guage requirements for ground radials? Ribbon cable is usually a pretty small guage.

3311. I LOVE CW!!!!

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-08 18:20:21 UTC
From: jeffj@cbnewsm.cb.att.com
Message-ID: <CELCA1.FMK@cbnewsm.cb.att.com>
Source record: 275231

I stand before you today my fellow CW lovers with a confession to make. I have strayed! Yes, indeed, I have strayed. In a moment of weakness I picked up my microphone and spoke upon the air. The shame that I felt was simply overwhelming. For speaking on the air I have given the anti-CW types added ammunition for their wishfull thinking that CW is a dying mode. I was simply frustrated at not being able to find a quiet spot upon which to call CQ in our crowded CW segment of the band. I searched and searched to no avail and so in a moment of pique I went to a quiet portion of the phone band (of which there are many) and called CQ. There I had a nice ragchew with another ham like many that I have had on CW. However it didn't have that same feeling as a good ragchew on CW. So as I stand here before you I promise to almost never trangress upon the phone portions again. I have only one more thing to say to you, I LOVE CW!!!! HAHAHAHAHA THEY WILL HAVE TO PRY THE KEY FROM MY COLD DEAD FINGERS BEFORE I'LL EVER STOP DOING CW. HAHAHAHAHA
Thank you. 8-)

John,

The article about Motorola's Drug free program was an unfair attack,
and a red herring in the argument over whether or not Motorola is
making an abuse of the copyright law.

>happens a lot. There are plenty of Extra class ops who kept their Novice
>calls, and a no-code Tech could operate in the Extra portion of the phone
>bands for a long time without being challenged. I know of a novice (or Tech,
>I forget) who did the phone Sprint a while back, using an amp on 20/40-80m.

If you can make yourself sound like you belong there then very few people
would ever question it.

Back in the mid/early 70's I knew a guy [older] who did not have his Extra
however he had a legit 1x2 call. He somehow got it since he had one back in
the 20's or something.. I forget the details. Anyway. He used to operate
down in the Extra CW segments all the time... Until one day the FCC caught
him down there during one of the CW DX contests. I forget the details but
he ended up taking his Extra test shortly after that..

From this and one other case, I know that the FCC *does* (or at least did)
listen in our bands. Especially during contests. I knew a guy who did not
have his Extra and and the FCC found him to be something like 4 Hz (Yes,
four cycles!) out of the band on 40 (or 80?) meters during a CW DX
contest at like 1:00 in the morning. I can't imagine an FCC monitoring
station just casually stumbling into something like that. They were out
looking for non-Extras in the Extra band during the contest!!

In this case, it was not intentional. His dial calibration was just a tad off
and he just got too close to the band edge... But they *were* out looking..

You never know who is listening.

3314. Re: idea for ground radials

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-08 18:51:27 UTC
From: alanb@sr.hp.com
Message-ID: <CELDps.5tx@srgenprp.sr.hp.com>
Source record: 275327

Scott Ginsburg (ginsburg@wellfleet.COM) wrote:

: Has anyone tried the following idea for installing ground radials for an
: HF vertical: get some multi-conductor rotor cable, and make cuts that would
: result in each conductor being 1/4 wavelength on a single band. For example,
: if you wanted radials for 40, 30, 20, 15 and 10, start with a piece of
: 5-conductor cable of length 34', and make 4 cuts stripping away the unneeded
: wire. The cable after being chopped up would look something like:

: ---------------------------------- 34'
: ---------------------- 23'
: --------------- 16'
: ---------- 11'
: -------- 8'

If you put two of these back-to-back you would have the old standard
multi-wire multi-band dipole. There will be some interaction between
the wire lengths. A good way to trim each length to resonance would
be to take two of the above radials and make a temporary dipole out
of them and trim for lowest SWR on each band. Start with the lowest
frequency band (longest) radial and work up. When you get the lengths
right, make up some more identical sections (as many radials as you want.)

Congratulations on your license, Tom.

I am not surprised. Even our Circulations Department won't have your
name and address until we get our monthly update from the FCC data
tapes.

If you want a membership application, though, send email to
djahnke@arrl.org and ask for membership information.

3316. Imminent Death of Ham Radio: 2m HT in Penney's Christmas Catalog

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-08 19:42:48 UTC
From: kucharsk@solbourne.com
Message-ID: <294fro$k0a@funhouse.solbourne.com>
Source record: 275233

For those who felt that Radio Shack's introduction of a 2m HT two years ago meant the "imminent death of Ham Radio," those people should stay away from the 1993 JC Penney Christmas Catalog.

There, on the bottom right hand corner of page 585 is a Midland 73-005 2m HT ($299). Yes, it mentions you need a license. No, I doubt they'll ask if you have a ticket if you order one.

3326. Converting an HT

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-08 20:20:28 UTC
From: sas@opus.xyplex.COM
Message-ID: <9310082020.AA07548@opus.xyplex.com>
Source record: 275238

Just a reminder that when you order crystals for a commercial radio converted to amateur bands, be sure to specify that you want amateur tolerance and not commercial tolerance crystals. This will save you a lot of money on the crystals! Reason: commercial tolerances are pretty tight to keep the radios very close to their assigned frequencies. We as amateurs are not constrained by any FCC regs in that area so amateur tolerance crystals are much cheaper to make.

How many times does it have to be said...This is the USA...ANYONE can purchase ANY radio that is for sale thru regular retail channels...whether or not they have the right to transmit is a completley different issue. This post is not meant as a flame at N0OKQ or to endorse illegal activity on the amateur bands, it is just a statement of fact of the law as it is written at this time.

3330. Re: DJ-F1T Experiences

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-08 20:56:21 UTC
From: rrossi@vnet.IBM.COM
Message-ID: <9310082058.AA20721@ucsd.edu>
Source record: 275245

Ref: A question asked some weeks ago....

I have been abusing a DJ-F1T since May and have had no problems with the rig. This is the first amateur radio that I have owned however, but have not been disappointed with its performance. I use it mobile with an Icom lapel speaker mike and have had favorable comments on my audio. It doesn't get all that hot when transmitting full power. The forty memories are nice and each can hold all the information needed to operate (CCTS, +/-, shift amount (up to 15.995 MHz)). Beyond the 15.995 shift you would need to use adjacent memory channels and the "odd split" function. The lighted keypad is nice although I like the DJ-580 style better, where the keys themselves have the designation on them rather than the HT itself. The 5V battery pack would be nice to get more distance, but the 600mAh maximum is somewhat small. My 7.2V pack will last over 24 hours receive mostly. I have never used the 5V pack. There is little room to provide for a larger capacity pack though since the pack snaps onto the back of the radio. A disadvantage (in my view) is that the external power and speaker mike connectors are on the side of the unit. Having the mike connector there is not so bad, but holding the rig with external power applied is slightly awkward. The frame of the rig is aluminum and the wrist strap ring (should you care to use it) is part of this frame.

There are 3 usable DTMF memories, the forth is used for decoding a transmitted code, and I guess you could re-transmit it. The scan is a little slow 0.5s/chan, and when the radio is scanning the keys cannot be locked (bumping the keypad when in scan can stop the scan and any of a number of other things after that). Although with the Alinco remote speaker mike you can change memories while the keypad is locked. There is a switch on the mike to lock out the remote channel plus/minus.

Overall I really like the radio. It's compact, reliable (so far), sensitive, and the stubby antenna that comes with it actually works pretty well (compared with an ANLI 15" and a 1/4wave). As far as the car on the radio trick goes notice that it's resting on the battery alone. I would buy the radio again if I were ever to buy just a 2M rig. My foreseeable future dilemma will be between the DJ-580 ,the FT-530, and the purported good front-end rejecting Standard dual bander.

I use a center feed zep, fed with tuned 300 ohm foam tv twin lead, running a tuner, with an overall antenna length of about 260 feet. Works great! Never use the band (160) during the Summer months, but during the Winter "it is fantastic"! Don't tell anyone though, it will get crowded and end up like 20.

|In article 4636@anomaly.sbs.com, kd1hz@anomaly.sbs.com (Michael P. Deignan) writes:

|}If I know that changing byte 3, bit 6, from a 0 to a 1 enables full-band
|}receive on a Motorola radio, and a local public-works department hires
|}me to modify their radios, I still fail to understand how this is a
|}"crime".
|
|Because you have given the customer something he hasn't paid for and
|you are making a living from it.

Wait a minute. If the customer has paid Michael, then they aren't getting something they didn't pay for. ;^)

You seem to be saying that Michael is "selling his brothers horse". I am not convinced this is the case.

If only Motorola can sell you something, then clearly Motorola must be the owner of that something, or must be given the authority by the owner to sell it.

What that something is, in this case, is the right to transmit and recieve on frequencies that are blocked on the customer's radio because of the software in the radio. Now it seems to me that as long as the customer has a valid FCC licence for those frequencies, the customer has the right to broadcast and recieve on those frequencies. Motorola cannot sell a right (or a privelige) which the FCC has granted.

On the other hand, it may be argued that what Motorola is selling is a service. The service of modifying the radio. Now what law would grant to Motorola the sole right to that service?

Copyright law? I don't believe it!
Patent law? Certainly not!

Laws governing trade secrets? Yes, only if those trade secrets had been violated by the servicing party. This should cover the case where someone stole the technology and sought to make a profit?

Laws governing contracts? Yes, if the sale contract stipulated that only motorola had these rights, and if such contract were held valid in the state of the customer.

(Usually if information is public knowledge, it can't be considered a trade secret. like magazine articles etc. In other words if John Q Smith, happens to have figured out that he can change an address and extend the coverage how has he violated any

agrement to maintain a trade secret?)

|Yes copyright laws do apply when it comes to altering computer code and
|then ytrying to make a living from it. And while we are at it -
|every time you sing Happy Birthday, technically you owe someone a royalty
|because that somg is copyrighted! As for books, go ahead and pull a chapter out of
|one and try to republish it with your name on it and watch what happens!

We are not talking about republishing or copying. We are talking about
modifying a legitamately obtained copy.

Even in the case where we are talking about making copies:

No you cannot modify a song or a book and then publish it and make money.
That would be a violation of a copyright. What you can do is start over
from scratch and write your own book and sell that.

(I can't believe any copyright law prohibits anyone from reading
a book aloud or singing a song aloud. Of course we could get into
freedom of speach issues here.)

|tweaking a circuit is one thing.
|
|Messing with the computer code for profit is another.

Why would software be more protected than hardware? Hardware can be patented
and software (generaly) cannot. Patents (generaly) offer more protection than copyrights.
But even Patents do not prohibit the customer from making personal modifications, or hiring
whoever they please to make modifications.

Does Motorola become offended if customers hire third parties to modify the
hardware in their radios? Suppose they could extend the transmit range?
Have they obtained something they have not paid for? What then?
All they have bought from Motorola is a radio! (Unless they also bought
a contract for certain services as with cell phone, where a modification
of a radio might well give them access to services they have not paid for.
This is another issue. I have not seen any postings that indicated that
this was the source of the concern behind the QST add.)

|You are the one who needs to study, you obviously don't understand what the issue is.

We would be happy to have you enlighten us. ;^)

|There are all kinds of protected items within a radio. Proprietary IC's are one.
|So is the competer code which makes the radio what it is. When you buy a radio

But how far can that protection extend? Can it prohibit someone else from
writing competetive computer code? Not by copyright! (IBM would have loved it
if the only software that could legally run on the IBM PC were IBM software!)
Can it prohibit the owner from making a modification? Not by patent.

|that is driven by a micrprocessor and computer code, you are not buying the code
|and that is where many people think they know better. You are merely being
|licenced to use it. The company still retains ownership of it. Just like

Yes contracts, leases, and licences can provide some protection. It seems that perhaps the only way out of this mess is for a third party to write and sell their own software designed to run on Motorola radios. ;^) As mentioned, some recent Supreme Court decisions have seen a limit on this protection, like with restrictions against reverse-engineering.

|going out and buying sheet music or a book.
^^^^^ ^^^^^ ^^^^
Hmm, can a book publisher prohibit you from making notes in the margins of a book you buy or sheet music? Would the Court dare go that far?

I won't be surprised at all if this ends up in the Supreme Court! (No, I don't intend to be one of the litigants. ;^)

So does this mean that you feel it is alright to modify those files on my IBM mainframe that tell the operating system that I have paid the yearly license fee?

Or I wonder if the guy posting from DEC the other day would mind if I modify the login program on my Decstation to allow more than two simultanious users without paying DEC for the privilage? Once I make the modifications, I am sure DEC wouldn't mind if I post if to the Internet.

Nobody is going to write new Motorola radio software from scratch. There is no way that they would make enough money from it to recoup their Engineering investment. As for doing it as a home project --Find a team of 100 software engineers who want to spend their personal time behind a work station for a year. I won't be volunteering for that assignment.

Motorola doesn't have a problem with business radio equipment being used in the ham bands or with hardware field modifications to the equipment. The problem is people hacking software to turn on features which Motorola paid to write, but that the customer hasn't paid to use. I have seen cases

where the software interactions from having several features turned on that were never designed to be used together caused equipment or system problems. Not to mention that changing codeplug bits in a radio is a good way to wind up with a radio that will only power up and display the error "FAIL 01/82" (corrupt radio EEPROM).

I am looking for information on Advanced Electronic Applications Amiga Video Terminal (AVT) System. Did it work well, is it still supported, what would a used one cost? What is it?? This is what I know about the System:

"The Amiga Video Terminal System is a revolutionary Hardware/software package that enables the Amiga user to send and receive images over the telephone or a radio transceiver. Images are converted to a digitally synthesized analog format which takes advantage of the data bandwidth to provide full-color images on the computer screen in as little as 12 seconds. Modes are also available for detailed images taking as long as three minutes for a 320 by 400 transfer. The System also supports analog facsimile high resolution (1024 horizontal by 1200 vertical) 16 level grey-scale images

Additional features include:

On-screen tuning oscilloscope
SSTV mode-to-mode conversion
Five software selectable input ports
Interference correction modes
55 SSTV modes
Up to 4,096 simultaneous colors
SSTV resolution up to 640 by 400 pixels
GEOSFAX (with adapter), WEFAX, NEWSFAX
SSTV auto mode detection
3D capability with user supplied LCD shutter goggles
Compatible with Amiga 500, 1000, 2000 and 2500 computers with a minimum of one megabyte of ram (1.5 Mbytes or more recommended)"

Thanks in advance, 73's

you are forgiven. let it not happen again. go forth and sin no more.

;-)

have we decided what the heck is going on at 7.050?? still powerful sig there most nights. remember the days of the "woodpecker", OHR (over the horizon radar)????

also, if you happen to tune down to 7.005 or so, you'll probably hear a pileup. seems like a rare country has been activated, but you knew that. oh, this is on all the bands, when they're open.

that's the good news. bad news (for some) it's CW only. you want to make the honor roll, then get out the key, keyer, or whatever. practice sending your call and then wait. know your call when it's sent at 20 to 25 wpm. then practice sending

599 TU ES GL

then E E for the "two bits" which was used to terminate "shave and a hair cut" when it was sent by ops in the know.

ok you're don't have an extra class license. no problem. wait until late next week or week after. maybe George will move up or start listening up from the low end.

and they say the bands are crowded.......... and cw is difficult. :-)

>The firmware is all copyrighted, tampering with it is a crime!

Oh boy.. I must be in big trouble. I have been writing notes inside
my copyrighted manuals. Wait it that the copyright people at my door??

If its just a key sequence to turn somthing on and off then I
dont see any tampering. If the firmware was included with the
radio and I make use of it where did the law get broken. If wish
to totally write my own firmware for the radio I can do that
makeing use of whatever feature the radio has.

Now if you use these mods to access service your not paying for then
let the police cuff you..

At a recent grarage sale, I picked up a Harris (Business or Police)
Hand-held radio. It works - On 151.625.
It's a well built thing, so I'd like to put it into use. Any
suggestions where I start for plans to convert it to 2 meter? Can it be
converted? (For those really in the know, the catalog number on it is
RF-7840 and FCC DATA is RF-2821A.)
Thanks in advance for any advice!
Cheers and 73's de

No it's not! You're not doing it for any monetary gain. And you DO own the unit. Tamper away! As long as you don't change the code around and then try to sell it off as your own, it doesn't violate copyright laws.

I'm glad you're not in charge of enforcing the law... we'd all be in trouble then. (Forgive us Hamtronics for we have modified your REP-200 firmware to add features such as paging, cw AND voice ID, etc.)

No, it's you who needs to get back on base. You think Motorola doesn't
reap the profits when they just sell you the 'base' model? Of course
they do! Then they rape you twice by changing a jumper and opening up
those "expanded" features. Hmmmmm.....

Are you one of those people who doesn't challenge a law?

Yup.. they run from 902-928MHz Spread Spectrum.

As an aside, I was talking with a rep from AT&T Business Group who was informing us that as of January 1994 or so they'd be coming out with a wireless office system. It's for use on their Partner(tm) and Partner Plus(tm) systems as of right now. It uses, of course, 902-928MHz. It's not like we really utilize the 33cm band to it's full potential but it's still sad to see it go.

> modifications, I am sure DEC wouldn't mind if I post if to the Internet.
>

It is your software. You bought it you can do what ever you want with it.
If the license agreement with DEC says that you are not allowed to modify
the OS to increase the number of users then doing so will be illegal.

I assume that when you bought the IBM software you bought a 1 year site license
so after a year it is illegal to use the software regardless of the
modifications you made.

When you buy a Motorola radio
are you buying the radio not a license to use a number of the radio's features.

> Nobody is going to write new Motorola radio software from scratch. There
> is no way that they would make enough money from it to recoup their
> Engineering investment. As for doing it as a home project --Find a team of
> 100 software engineers who want to spend their personal time behind a work
> station for a year. I won't be volunteering for that assignment.
>
Motorola did not pay millions of dollars to write the software. They went to
the local Radio sack and they bought a DPS and a D/A chips. then they
took the chips and put them in the radio. Then the bought a book from the
local bookstore about signal processing algorithms, and they implemented
these algorithms.

They hired 2 engineers, propably EE grad students, and they pay them
$4.65/hour to write the code. It took these 2 people a few months to do
the work.

In any case you do not need 100 people working for a year to implement the
features people will pay lots of money to get.

> Motorola doesn't have a problem with business radio equipment being used in
> the ham bands or with hardware field modifications to the equipment. The
> problem is people hacking software to turn on features which Motorola paid
> to write, but that the customer hasn't paid to use.

If Motorola includes in the radio a piece of paper that says, "by opening this package you agree not to modify this radio in any way" then it will be illegal to do so. If Motorola does not include it then it is very legal, or it should be, to modify the radio.

> I have seen cases
> where the software interactions from having several features turned on that
> were never designed to be used together caused equipment or system
> problems. Not to mention that changing codeplug bits in a radio is a good
> way to wind up with a radio that will only power up and display the error
> "FAIL 01/82" (corrupt radio EEPROM).
> --
> John Gilbert johng@ecs.comm.mot.com Motorola SmartZone Trunked
> Systems

Most equipment I used include labels of the form, "if you break this shield the warrantte is voided." Motorola can include a label that says "if any modifications are done on the radio the warrantte is voided."

In the old days of single sided floppy disks, people used to cut a hole on the side of the disk to use it as a double sided disk. I have heard of computer companies buying 25 Mhz CPUs and using them as 33 Mhz.
People modify car engines all the time to make them more powerfull.

And of course we must not forget that if it was not for people who reversed engineered Intel CPUs a 8088 PC compatible would still cost $3000 and a math coprocessor would still cost $900 instead of $89.

If Motorola wants people not to use it's equipment then it can do what INTEL does with its CPUs. Deactivate some of the hardware features of the device.
Then Motorola will be able to make lots of money by selling the equivalent of an intel overdrive CPU to its customers and be hated like INTEL is. If I must only change the EEPROM to get more features out of the radio, then I have every right to do so and tell all my friends how to do it.
I even have the right to sell a kit to people to do it.
The last time I asked it was still legal to buy EEPROM chips and programmers.

I think it is called the free enterprise system.
Wellcome to the real world.

Napoleon

SB SAT @ AMSAT $ANS-261.01
STS-58 SAREX MISSION INFO

HR AMSAT NEWS SERVICE BULLETIN 261.01 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 18, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-261.01

KA3HDO Provides STS-58 SAREX Mission Information

The STS-58 flight of the Space Shuttle Columbia represents the next mission carrying the Shuttle Amateur Radio Experiment (SAREX). STS-58 is currently scheduled for launch on 14-OCT-93 at 14:53 UTC. Spacelab Life Sciences-2 is the primary payloadde voice and packet. Discussions between the astronauts and the SAREX working group indicates that there will be more general contact operations on this flight than was performed on each of the three SAREX flight flown this year. Please remember that this is a preflight prediction. The astronauts and the SAREX working group cannot guarantee this prediction. The following information gives more details on SAREX operations for STS-58.

STS-58 Shuttle Amateur Radio Experiment (SAREX)
Information Sheet

Mission: STS-58 Space Shuttle Columbia
Spacelab Life Sciences-2 (SLS-2) Mission

Launch: October 14, 1993, 14:53 UTC

Orbit: 39 degrees orbital inclination

Mission Length: 13 days (Nominal)

Amateur
Radio
Operators: Bill McArthur (KC5ACR), Marty Fettman (KC5AXA),
Rick Searfoss, Callsign TBD

Modes: FM Voice
Prime callsign KC5ACR

Packet Radio
Callsign W5RRR-1

Frequencies: All operations in split mode. Do not transmit on
the downlink frequency.

Voice Freqs: Downlink: 145.55 MHz (Worldwide)
Uplinks: 144.91, 144.93, 144.95, 144.97, 144.99 MHz
(Except Europe)
144.70, 144.75, 144.80 MHz (Europe only)

Note: the crew will not favor any specific uplink
frequency, so your ability to work the crew will
be the "luck of the draw."

Packet Freqs: Downlink: 145.55 MHz
Uplink: 144.49 MHz

Info: Goddard Amateur Radio Club, WA3NAN, Greenbelt Maryland,
SAREX Bulletins and Shuttle Retransmissions
3.860 MHz, 7.185 MHz, 14.295 MHz, 21.395 MHz, 28.650 MHz
and 147.450 MHz (FM)

Johnson Space Center ARC, W5RRR, Houston, Texas
SAREX Bulletins 7.225 MHz, 14.280 MHz, 21.395 MHz,
28.650 MHz, (SSB) and 146.64 MHz (FM)

ARRL Amateur Radio Station, W1AW, Newington, CT
SAREX News Bulletins
3.990, 7.290, 14.290, 18.160, 21.390, and 28.590 MHz
and 147.555 MHz (FM)

Also, bulletins available on internet, via AMSAT ANS,
Compuserve, and your local PBSS.

School Group Participation: 18 school groups will participate
in SAREX with pre-scheduled direct
and telebridge contacts. These include
17 in the U.S., and one France.

Prelaunch Keplerian Elements:

The following Keplerian Elements are provided by Gil Carman (WA5NOM)

>($299). Yes, it mentions you need a license. No, I doubt they'll ask if you
>have a ticket if you order one.

Years and years ago, Sears carried both a synthesized and a crystal-controlled 2M mobile radio. Looked JUST like a CB, down to having 23 "channels" on the frequency switch (the xtal-bound unit, that is). SO many CBers bought them that two meters here became a wreck. In fact, it appears to be the cause of a "nonstandard" operating mode in the Chicago area; if one wants to break into a conversation, the convention is not to say "break", it's to sign with your call. This was to make sure the breaker HAD a call.
Expect much more of the same, and much worse, as these units hit the market.

>Is this a reasonable idea? Has anyone out there tried this?

This can work, but the individual elements interact strongly.
You'll have to do a lot of pruning to get all the elements
resonated for their individual bands. If you are burying
the wire, this is all unnecessary. Just get as many radial
wires as you can in the ground, and make them all as long
as possible. For installations where raised radials are
required, tuning them for each band can be worthwhile if
you can't deploy a full ground screen of 200.

3350. "safe" cars for mobile VHF/UHF?

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-09 14:35:58 UTC
From: jwm@world.std.com
Message-ID: <CEMwJz.996@world.std.com>
Source record: 275179

I'm in the market for a new car. Obviously(?), one of the first things I will do after picking up the car is install a mobile VHF/UHF transceiver. I've read about problems that hams have had with the engine CPU in certain cars--most notably Toyotas--getting fried by a 40-watt ham xcvr operated from the car. Obviously, this is an important factor for me in which cars I will consider buying.

Has anyone compiled a list of "problem" cars? Have you had problems with your ham xcvr interfering with your car's electronics? If so, to what degree, and was the "damage" permanent? Please respond directly to me via e-mail at jwm@world.std.com; I will summarize the results and post. If there is interest, I will make the results available for the FAQ.

Take care and 73 de

>here?

Note that taking measurements with the instruments in the near field
can yield misleading results. Your friends the Smith Chart and the
coax loss tables can give you accurate results with any random length
of feedline.

Warm? I've *melted* Hustler resonators. That was with a Galaxy V MkII
running 400 watts PEP to a Hustler mounted on a 67 Chevy.

>However, I disagree that there could be a "much more efficient antenna
>design" of the same physical size, unless the lower mast were to be a
>longer portion of the total antenna length. Radiation occurs when current

>
>For practical purposes, the resonator only serves to make the antenna match
>the feedline. Although some current does flow in the whip above the
>resonator, it is at best, the same amount of current that would flow in the
>same length at the top of a full quarter wave vertical. That top segment
>supplies a nearly insignificant percentage of the total amount of energy
>radiated.

This analysis is flawed. Yes the bulk of the radiation does occur from
the mast below the coil, coils are lousy radiators, but the coil acts
in lieu of the length of a quarterwave tower. At 75 meters, an unloaded
tower would be 66 feet tall and the current would be distributed as a
quarter sinusoid with the maximum at the base and the minimum at the tip.
Now when the coil replaces most of this length, in this case 59/66ths of
the length, most of the current still appears in the coil because a 1/4
wave radiator must have a quarter sinusoid current distribution. This
current doesn't radiate much because the radiation field is mostly cancelled
by the opposing turns, but it will be dissipated in the coil resistance.
This represents the major loss in the antenna. If you replace it with
a high Q coil, most of the current will be handed back from the reactance
as the field collapses, contributing to the standing wave on the antenna
which generates the radiation field.

>The article about Motorola's Drug free program was an unfair attack,
>and a red herring in the argument over whether or not Motorola is
>making an abuse of the copyright law.

Oh, I don't know. Abuse and intimidation are abuse and intimidation,
whether in drug testing, copyright law or whatever. If it's corporate
policy to abuse and intimidate, it's at least marginally topical.
As a CONSULTANT to Motorola a while back, in order to get a pass to
enter the building, they wanted me to sign an invention agreement! I refused
and simply went to the guard desk every day and signed in as a guest instead.
If they want me, as a consultant, to assign any and all inventions I come up
with to them, then let them pay me my rate for 24 hours a day, 7 days a week
commencing with the time I first worked in the industry and ending with the
termination of the agreement. Otherwise, they get the work I do for them
while they're paying me.
This was IMHO simple intimidation, because such matters were covered in the
contract they signed with the consulting house I was working for at the time.
I feel it's topical because a trend seems to be emerging here; they seem
to have the attitude that they own everything and everyone they come in
contact with.

>by any FCC regs in that area so amateur tolerance crystals are much cheaper
>to make.

On the other hand, if you're trying to hit a repeater, it'll be to your
advantage to transmit on the frequency on which the repeater is listening.
Most commercial equipment is used with repeaters, thus the tight tolerance.
If you're also going to use a repeater, or a network of other fixed
frequency stations, such as a packet LAN, then you want to be on the
correct frequency too. Any old frequency will do if the intended target
has a tunable receiver, but if not, go with the closer tolerance crystals.

"Amateur" tolerance crystals can be out by a kilohertz at VHF, or 5 or more
kHz at UHF, and still meet spec. That will often *work* if you have a good
signal margin, and the receiver on the other end has good AFC, but it's less
than satisfactory as you tend toward the fringes, or when you try to hit a
repeater. Repeaters normally do not use AFC because they have to work with
a network of other stations and AFC can leave the receiver at one edge of
the channel when the next user tries to bring up the machine from the other
edge. Especially at UHF, you should also specify *temperature compensated*
crystals. These are only available in commercial tolerance, but they are
well worth the extra expense if your equipment will see temperature extremes.

From a software and copyright point of view, yes it is all right, provided there are no contractual agreements to the contrary.
From a broad legal standpoint, it would probably constitute fraud, intent to defraud, and breach of (the monetary portions of) their contract with IBM.
(Disclaimer: I am not a lawyer except when my significant other has a fantasy she wants to play out.)

So, remember not to modify the portions of your Motorola radio that tell the radio firmware that you've paid your yearly license fee, everyone. :-)

Nonsense. The customer paid for the radio, and the customer paid to have it modified. The person doing the modification isn't violating Motorola's copyright any more than someone who autographs a book is violating the publisher's copyright. If Motorola doesn't want to sell a customer something, they don't have to include it in their radio. If you sell me a fan for cooling my shop, and it also can be modified to make mounds of cold slaw, you don't get to come back and charge me again for the fan. The modification is value added by me, or a third party.

>one and try to republish it with your name on it and watch what happens!

No. Copyright applies if one were to make *copies* of the code, modified or not, and attempt to sell them, or even give them away. If you modify the *original* purchased copy, you are not in violation of copyright. As an example, I can buy a book, say the ARRL Operating Manual, which is copyright. I can then tear pages out of it in order to start a fire in my fireplace. That's not a violation of the ARRL copyright. Or I can insert additional pages in the book, remove pages from the book, or alter the contents of a page in the book. None of these actions, any of which may make the book more useful, are violations of the ARRL copyright. The same applies to computer code. Nothing in copyright law requires an end user to leave the code unmodified. The only thing copyright does is prohibit others from selling unauthorized *copies* of the code. That's where the "copy" in copyright comes from.

Musical copyright is somewhat of a special case since each *performance* of the music generates a new *copy* of the song, however transitory. The courts have ruled that this does *not* apply to computer code since in_menory copies are an integral part of the operation of the code. Otherwise, every time you load your text editor, you'd be violating the publisher's copyright.

No, in both cases you signed an explicit licensing agreement with the
software vendors prohibiting modification of the code they are renting
to you. This would be like getting out the hole saws and mounting permanent
antennas on a rental car.

>Nobody is going to write new Motorola radio software from scratch. There

>station for a year. I won't be volunteering for that assignment.

I sincerely doubt it's that hard, but even if it is, no one is talking
about clean room clones. The issue is whether Motorola can prevent
modifications to a legally purchased component of one of their radios.
Since they do not require an explicit license agreement prior to purchase,
and shrink wrap licenses have been declared null, they can't control
the use to which their legally obtained codes are put. If they do start
requiring such a license, I will strongly recomend that my company purchase
radios from an alternate vendor.

>Motorola doesn't have a problem with business radio equipment being used in

>problems. Not to mention that changing codeplug bits in a radio is a good
>way to wind up with a radio that will only power up and display the error
>"FAIL 01/82" (corrupt radio EEPROM).

Well here's an issue. Motorola is trying to avoid the expense of
burning different ROMs for different radios by using a common set
of codes with flag bits to activate various parts of the supplied
codes. They can't copyright a changable flag. If the customer's
changing of the flag causes the equipment to malfunction, it's
solely the customer's problem, and not Motorola's concern. If
Motorola thinks this may hurt their reputation, they can pay the
cost to burn separate ROMs for different radio sets. Attempting
to intimidate their customers isn't buying Motorola any good
will.

While not on the engineering staff for ARRL perhaps I can shed some
light on why this very same connector was chosen locally years before
ARRL FINALLY chose SOMETHING. 1) It is readily available...at RS
of course ;-), 2) It is keyed so it is difficult to plug it in
incorrectly. 3) The current rating is adequate for the common
50W VHF transceivers and UHF transceivers we are using today in emergency
work. Note that last item... emergency work. This connector was
recommended for ARES work... I'm not trying to debate the utility
of HF in such things, but rather most of our efforts today in this
field seem to revolve around VHF/UHF capabilities. The utility of
having a STANDARD connector for such work can't be argued. The
real trick was getting someone to choose a standard at the national
level. ARRL finally did such after 5 years of pushing from lots
of directions.

Hope this answers some of the questions anyway. It isn't necessarily
the right answer for all applications..caveat emptor.

3361. Death of Ham Radio: 2m HT in Penney's Christmas Catalog

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-09 18:22:04 UTC
From: William=E.=Newkirk%Pubs%GenAv.Mlb@ns14.cca.CR.rockwell.COM
Message-ID: <9310091838.AA16815@ucsd.edu>
Source record: 275184

>For those who felt that Radio Shack's introduction of a 2m HT two years ago
>meant the "imminent death of Ham Radio," those people should stay away from
>the 1993 JC Penney Christmas Catalog.
>There, on the bottom right hand corner of page 585 is a Midland 73-005 2m HT
>($299). Yes, it mentions you need a license. No, I doubt they'll ask if you
>have a ticket if you order one.

whoa! Cool! (i guess N0OKQ didn't know Sears was selling 2m Yaesu's about what? 15-20 years ago in their catalogs? didn't do all that well...) Then again, i did turn in a suggestion to Heathkit in 1973/74 that said they should offer a kit version of a DEC PDP-11/10 or 11/20...and see where that's got them today..

What's missing is a reference to say something like:

You need an Amateur Radio License to legally operate this equipment.
To find out how to obtain an Amateur Radio license, call (800)
326-3926 for a free information kit.

maybe i should suggest this to Wayne Green....sort of a litmus test to see if W2NSD is really interested in amateur radio any longer or if the mags are on autopilot. Or Don Stoner ... surprised NARA didn't have their thumb on the pulse for this one.

I wonder if the radio is any good? Midland didn't exactly have a great reputation the last time around due to their position in the CB business. Wonder how well they'll sell with Radio Shack sitting out there at $275 or less?

And I wouldn't be surprised to find it would be possible for Penney's to ask about amateur radio licensing when ordering. It was Sears that could never figure out that pants had to have a waist size AND an inseam.

Maybe the ARRL needs to approach Penney's NOW and offer to help if possible. I'll have to go bug the manager of the store - I'm going to want his customer service department outfitted with the right information if he's going to be selling amateur radio products.

73, bill wb9ivr (who's buying an $20 biz card spot in the local high school marching band jamboree program....just to promote amateur radio. got the prototypes in the os/2 computer at home - need to print them out and deliver them to the layout guy monday...something like 5,000 copies are going to be printed.....)

3362. RACES Bulletin #295

Bid : $RACESBUL.295

TO: ALL EMERGENCY MANAGEMENT AGENCIES VIA AMATEUR RADIO
INFO: ALL RACES OPERATORS IN CA (ALLCA: OFFICIAL)
ALL AMATEURS U.S. (@ USA: INFORMATION)
FROM: CA STATE OFFICE OF EMERGENCY SERVICES (KH6GBX @ WA6NWE.CA)
2800 Meadowview Rd., Sacramento, CA 95832 (916)262-1600
Landline BBS open to all: (916) 262-1657
RACESBUL.295 DATE: Oct. 11, 1993
SUBJECT: MISC - Responders and their vehicles - Part 2/4
(2) What is your role? This may well determine your type of
vehicle and how it is equipped. Some personnel need basically to
transport their equipment, tools, or supplies to a specific site,
unload, setup, and go to work. Other responders may be overhead
or supervisory personnel. Their transportation needs are
basically the ability to go anywhere at any time. It may be
important to be able to transport other emergency workers from
one place to another during the incident.
Some communications personnel may choose to fulfill the need
for a completely self-contained mobile communications station. In
other words, they go to a site and set up a communications relay
or terminal. They respond preparedto be totally self-sufficient
for several days.
Overhead personnel may need multiple mobile radios to
communicate with several services other than the one to which
they may be attached. Right or wrong, officials of other agencies
may use you and your vehicle at any time or place and expect that
you have the capability to communicate with their service. It
never hurts to have every communications capability, particularly
with and for your local agencies and organizations.
(3) Climate and terrain may dictate what is appropriate for
a response vehicle. Don't try to take an inappropriate vehicle
where a 4-wheel drive or truck is called for.
(Continued in Part 3 of 4 parts)

...no, not the planet, the car :-)

Just wondering if anyone out there has experience using/installing
2-meter equipment (or HF, for that matter), in a Saturn. After the horror
stories I've heard from Toyota owners, I'd like to ask around before I
put any equipment in my new car.

Thanks!

I use one on 2M and it's very close to my bird 43. I torched the diodes once; I replaced them with 1N914's and it still works OK but it's not as sensitive on lower bands.

(my original post noting being bumped from last place in district 6 on the hams-on-usenet list deleted)

Hey Jeff, us Hawaii hams are NOT part of district 6; KH6 is its own district, just as KH1 (Baker Island) is not part of district 1, or just as KH2 (Guam) is not part of district 2, or just as KH3 (Johnston Island) is not part of district 3, or just as KH4 (Midway Island) is not part of district 4, et cetera...

Jeff NH6IL (back in the days when Capt. Cook discovered the Hawaiian Islands: WA6QIJ)

Aw geez. That's what I get for being in a hurry to make a semi-humorous comment on a dry subject :-). Guess I should have said "last place in the sixth grouping of US hams on the list" or something...from the looks of how the list is put together, KH1's would get lumped into the first district, etc., etc. Maybe I should let Mark speak for himself on how the list is put together (if anyone's still reading by now).

Then again, Jeff, as an OF like me (BTW, did the good Cap'n have a 500kHz CW distress rig?), you should remember that prior to the Great Callsign Rehash of 1978, all Pacific stations had a "6" in their calls (KC6, KG6, KX6, etc.) and thus were "part of the sixth district". Must have been that portion of the wetware kicking in to post, yeah, that's the ticket...

Still trying to find a decent plate lunch here in sunny Dayton,

Jeff

One field day, I set up my trusty satellite station in my Volkswagen camper there at the fd site. After a couple of unsuccessful passes, someone pointed out that the 10 meter beam was pointing the opposite direction from the 2 meter beam. Ever tried to work a satellite via *long path*?

OK, folks, let's let it all hang out. What's the biggest doofer you've pulled on a Field Day? I'll throw a small one out...

A few years ago, at a FD site which shall remain nameless, I drove up just as some of the crew were hauling the center of an inverted Vee up a 40' mast. Noticed that something was missing, but couldn't figure out what. Then it dawned on me, and I walked up to the guy pulling on the rope and said:

"Don't you think you might want to put a feedline on that antenna?"

Later that night, we tried to put up a 160m dipole in the dark. We thought we had it in the air, but noticed the SWR was a bit on the high side. At dawn, we figured it out: one leg of the dipole was wrapped around a guy wire, with the leftover portion laying on the ground.

73,

Jeff

I am happy to say that I passed all the elements to become a general class operator today, and while I'm still in a good mood (before I start thinking about how long I'm going to have to wait on the FCC) I wanted to say a big "thank you" to all the gang at the ARRL.

The ARRL VECs who ran the test session were helpful and friendly, even beyond what I expected; the W1AW code practice is what got me up to 15 WPM on morris; the ARRL license manuals are superb study tools; and finally, a special thanks to Jim Kearman, Jon Bloom, Luck Hurder, et. al. who hang out here on Usenet and over there on Compuserve and who kept my interest in amateur radio peaked every time I stumbled over another interminable code-no-code flamewar and wondered whether I *really* wanted to have anything to do with those bozos.

Oh yes, and special mention to Luck Hurder for the ARRL Info Server which was a fantastic resource when it started and just keeps getting better.

I don't care what Wayne Greene says, if it weren't for ARRL I doubt that I would be holding my CSCEs today. Thanks.

I have a Motorla "moxy" vhf radio. I know nothing about it!
It's a new looking radio I bought at a garage sale. (the people had a
gas station & this radio in the truck) It cost me $20
& I got 2 radios 1 mobile & 1 base with a power supply (heavy motorla)
the base came with a neat desk mic. (I saw it for $140 at the local
2-way store), but they said I couldn't put It on 2m amateur band.
Nothing is impossable.
If you know anything about it leave me a msg. (here)

I didn't realize the maritime service did CW at 1 watt! And now you say they're dropping it - to less than 1 watt? Other countries are dropping to below 1 watt, too? Gee, everyone will be working QRPp soon (QRPp = less than 1 watt).

Seriously Tom, I have to take issue with your one remark concerning the popularity of CW waning. A couple months ago someone took an informal poll on here asking us to submit to him our percentage of time spent on the various modes. As I recall, VHF-FM ranked highest followed VERY closely by CW. Maybe that person could kindly repost the results of his survey.

hey... i used CW Morse today... i heard a weak station on +/-432.050mhz
calling cq using CW Morse... the call was ve3ont... i am in alabama...
so that is pretty good dx for these parts... 'course, he was using
a modest 43 meter diameter dish and the satellite oscar 0...
i was using a 22 element yagi.. unfortunately he didn't hear me calling
him back on CW Morse... could it be that my CW Morse was lacking???
... or maybe it was my antenna, or my receiver, surely not my well
practiced and fluent CW Morse... really, my keyer does still work ;-)
... maybe what i have been hearing here on the net is true... dx
does still use CW Morse at times...

3377. Turning in RFI generating PC's to FCC

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-10 02:22:06 UTC
From: jdc3538@ultb.isc.rit.edu
Message-ID: <1993Oct10.022206.6194@ultb.isc.rit.edu>
Source record: 275197
Cross-posted to: rec.radio.amateur.misc,sci.electronics

I recently purchased a mail-order PC with a poorly shielded case. (The plastic cover had no conductive coating, ferrite beads were noticeably absent on the PC and poorly placed inside the keyboard, etc.) It could be picked up on 2-meters (with the antenna outside), 880-900 mhz (scanner in the next room), shortwave, etc. The PC registered at S-7 on a handheld transceiver 3 feet away (with a rubber duckie antenna, no less).

The folks who assembled and sold it were no help, and denied knowlege of something as technical as radio waves. "It's FCC certified, sir. We send it to lab and they approve it." Another good line is, "Our radio work just fine and we have many machine." Of course they're listening to the 50,000 watt FM station three blocks down the road.

Anyway, I turned them in to the FCC. Here's how you do it:
- Call the local FCC field office. If it isn't in your phone book call the Federal Information number, 800-366-2998.

- The field office asked me to dial up the FCC part-15-info BBS, the "FCC Public Access Link", and find out if the FCC ID number listed on the machine is for real. The phone number for the FCC BBS is 301-725-1072. It's 2400 baud, with no login/password required.

- The BBS has all kinds of neat stuff, but you want to look up the FCC ID number on the back of your PC. Enter option 1 for "Access Equipment Authorization Database", then 1 at the next menu for "Equipment Authorization Application Status." You will then be prompted for the equipment's FCC ID number.

In the case of my 486-DX66/2, the FCC registration number was from a 486-25 (DX or SX wasn't specified, nor was the type of cabinet). I reported this to the local field office, along with the FCC registration number and the company's name/address. The FCC engineer (who was most pleasant and helpful) pointed out that many of these companies have one machine certified, then sell everything under the sun using that number.

Will any of this do any good? Perhaps, perhaps not. But if we just continue to ignore the problem it certainly won't get any better.

73...Jim

I remember having some pin-head challange my right to transmit on a repeater since I have 2X3 (obviously novice) callsign. After seriously dressing him down on the repeater (and risking my license in the process) I received a standing ovation from several other ops that had had run-ins with this fool in the past.

I've had my Kenwood 741 mounted in my Saturn SC2 for the past 6 months
with no problems at all. It puts out 50 watts max., and I have yet to
discover a problem with any of the electronic equipment that came stock
or as an option in the car. Similarly, no problems on 440 either. Good
luck!

Found this on packet:

Date: 06 Oct 93 15:14
From: N1NRA@KD2AJ
To: INFO@ALLUSA
Subject: Re: Motorola Ad Oct QST

For those of you that have read the ad on page 161 of the Oct 93 QST and
are puzzled by its intent, I would suggest that you make the call to the
listed 800 number and ask for Mr. Tony Beill. This gentleman will be more
than glad to convey Motorola's intention behind this ad.
Mr Beill heads Motorola's product security division and of course will have
all the answers for your questions.

Some years ago, in northern New Jersey, at a field day site at the local community college, some of us were going to use an aluminium ladder as a mast. We strap on an antenna, and instead of using people pulling on ropes to raise it, someone uses their van. With 3 of 4 guy ropes already installed on the ladder/tower, guess what happened when the van went a little too far with the 4th guy line/rope tied to its bumper? Ladder twisted up like a pretzel. :-(

I suppose you could use an old computer mouse and press on one of the buttons to tap out code. You might have to remove any mouse electronics and wire directly to the button switch contacts to get it to work. Might be easier on your hand and fingers.

PART 1 of 1 Date: 05 October 1993

AFGHANISTAN
-----------
* RADIO AFGHANISTAN, Kabul; was observed broadcasting in English on
4775 kHz at 1430-1500. (BBCM, 1/10/93)

ARMENIA
-------
* RADIO YEREVAN, Yerevan; transmissions in English at 0945-1000 (Sun)
on 15510, 15455 and 15485 kHz and at 2245-2300 on 7400, 9705 and
11920 kHz. (CJO, 2/10/93)

BULGARIA
--------
* RADIO SOFIA, Sofia; transmissions in English:
0500-0630 on 9700 and 11720 kHz,
1130-1300 on 11645 and 13645 kHz,
1515-1645 on 12085 kHz,
2100-2200 on 6085 and 9700 kHz. (CJO, 2/10/93)

CUBA
----
* RADIO HAVANA, Havana; winter transmission schedule:
In English:
0000-0200 to America on 6010 and 9815 (USB) kHz,
0200-0500 to America on 6010, 6180 (0400-0500) and 13660 kHz,
0500-0700 to America on 9510 kHz,
2100-2200 to EUROPE & M.East on 17760 kHz,
2200-2300 to EUROPE & America on 6180 kHz.
In French:
```

0230-0330 to America on 6180 kHz,
2000-2100 to EUROPE & M.East on 17760 kHz,
2300-2400 to America on 6180 kHz.
In Portuguese:
1000-1100 to America on 9550 kHz,
2100-2200 to EUROPE & M.East 17705 kHz,
2200-2300 to America on 15340 kHz,
2300-2400 to America on 15230 kHz.
In Spanish:
0000-0200 to America on 6180, 9550, 9655, 11760, 11875, 11970,
13660 and 15230 kHz,
0200-0400 to America on 5965, 9550, 11760, 11875, 11970 and
15230 kHz,
0400-0500 to America on 5965, 11760 and 11970 kHz,
1100-1300 to America on 6060, 9550 (1100-1400), 11760 (1100-1500)
and 15230 kHz,
2000-2200 to EUROPE, M.East and Africa on 13715 (USB),
17705 (2000-2100) and 17835 kHz.
() All frequencies and transmission times are subject to variation.
Address: Apartado 6240, Havana, Cuba. (BBCM, 1/10/93)

MONACO
------
* T(rans) W(orld) R(adio), Monte Carlo; some transmissions to EUROPE:
0740-0920 (Sun, 0740-0945) in English on 7385 kHz,
0830-0845 (Sun, 0830-0915), 1105-1120 (Mon-Sat) and 1430-1500 in
German on 6230 and 7160 kHz. (CJO, 2/10/93)

SOMALIA
----
* RADIO AWDAL, Boorama; this station, controlled by the Gadabursi
clan, reportedly broadcasts at 1630-1700 on 6500 kHz.
(BBCM, 1/10/93)
* RADIO MOGADISHU, The voice of the Great Somali People [Somali: Radio
Mogadishu, Codka ummad weeynta Soomaaliyeed], -; this pro- Muhammad
Farah Aydid station is transmitting on a variable frequency of
6870 kHz at 1500-1800. (BBCM, 1/10/93)

PART 1 of 1 Date: 09 Oktober 1993

CANADA
------
* R(adio) C(anada) I(nternational), Montreal; in English to EUROPE:
0600-0630 (Mon-Fri) on 6050(u), 6150, 7155(u) and 9760 kHz,
1430-1500 on 9555(u), 11915(s), 11935(u), 15315 and 15325(s) kHz,
2130-2230 on 5995(u), 7260(u), 11945, 13650 and 15325 kHz,
2300-0100 on 5995(u) and 7250(s) kHz,
(s) = Sines, Portugal relay, (u) = Skelton, United Kingdom relay.
(CJO, 9/10/93)

GREECE
------
* VOICE OF GREECE, Athens; can be heard at 1900-1910 in English,
1910-1920 in French and 1920-1930 in German on 7450 and 9380 kHz.
(CJO, 9/10/93)

HUNGARY
-------
* RADIO BUDAPEST, Budapest; transmission schedule in English:
0200-0300 to N.America on 5970, 9835, 11910 and 15220 kHz,
2100-2200 to EUROPE on 6110, 7220, 9835 and 11910 kHz.
(CSt, 7/10/93)

SAO TOME E PRINCIPE
-------------------
* V(oice) (O)f A(merica) relay, Pinheira; on July 13th, 1993 the VoA
relay station at Pinheira was inaugurated. The station has been
installed there for 60 million US$. The programmes transmitted by
the station are being received by satellite from the U.S.A. and the
```

relay station (on medium wave) is aiming at the West- and
Central-African regions within a radius of 1500 kilometers, i.e.
Ghana, Togo, Benin, Nigeria, Cameroon, Equitorial Guinea, Gabon,
Congo and Western Zaire. The station transmits with a 100 kW
transmitter on 1530 kHz from 0300-0700 and 1600-2200 using
directional antennas. The languages used are English, French,
Portuguese and Hausa. Because of the unreliable power situation on
the island, VoA has its own electricity generators. Sao Tom
National Radio, transmitting with 20 kW using a fixed antenna on
945 kHz is a llowed to use the same powersupply. (HvL, 09/10/93)

SLOVAKIA
----
* SLOVAK RADIO, Bratislava; can be heard with programmes in English at
1930-2000, in German at 2000-2030 and in French at 2030-2100 on
5915, 7345 and 9440 kHz (ex 9605 kHz). (CJO, 9/10/93)

UKRAINE
----
* RADIO UKRAINE INTERNATIONAL, Kiev; transmissions in German:
1800-1900 on 4825, 5960, 5985, 6010, 6020, 7240, 9505, 9675, 9685
and 9860 kHz,
2300-2400 on 4825, 6070, 6090, 7150, 7165, 7240, 7285, 9600 and
9685 kHz. (Len, 30/9/93)

U.S.A.
------
* WEWN, Birmingham; transmissions in DUTCH; 0600 on 5825 kHz and 2100
on 9985 kHz (ex 11695 kHz). (CJO, 9/10/93)

YUGOSLAVIA (or what is left of it!)
----
* RADIO JUGOSLAVIJA, Belgrade; is transmitting programmes in English
at 1930-2000 on 6100 kHz and at 2200-2230 on 6100 and NEW 6185 kHz.
(CJO, 9/10/93)

WITH THANKS TO (in alphabetic order):

Cross-posted to: rec.radio.amateur.misc,sci.electronics

> Will any of this do any good? Perhaps, perhaps not. But if we just
> continue to ignore the problem it certainly won't get any better.

You are correct that the problem can't get any better if you
don't do something, and thus, you can certainly not make matters
any worse by following up as you have. Moreover, FWIW, the FCC
has in recent years gotten quite aggressive about issuing fines
(or what they call "monetary forfeitures") for fall sorts of
violations, including failure to observe Part 15 requirements in
the marketing of electronic equipment. If it turns out that the
model you have is in fact noncompliant, then I would not be
surprised to see the information you provided to the FCC result in
a forfeiture of at least $6,000 to the vendor. Theoretically it
could be more because each day of a violation counts separately,
but the FCC typically starts with the base amount, especially if
it is the first offense to come to their attention. If the vendor
has aany interest in complying with law (or at least a desire to
stay out of trouble) that initial fine is usually adequate to get
its attention and make sure it cleans up its act.

Good luck.

>a Field Day? I'll throw a small one out...

I went to one years ago with a friend. The friend borrowed a "cherry-picker" from the sign company he worked for part-time, to help get antennas erected. Somewhere around 10 or 11 PM, one of the HF beams needed adjustment, and he started raising the cage... and hydraulic fluid started spewing out of a newly-ruptured hose.
The only place we could find any was about 10-15 miles away at O'Hare Airport. He and I drove down there with every container we could muster, and the guys there set us up with more than enough. We somehow repaired or replaced the hose and refilled the machine by 1 AM, fixed the antenna and spent the rest of Field Day stinking of hydraulic fluid.

>will.

Actually, they may be moving in this direction, but in a slightly different manner: the MTS2000 series, at least, has the firmware in EEPROM. I don't know if the current programming software does this, but that makes possible downloading only the code that implements the features the user has paid for into the radio. Turning on additional features would then require downloading whole modules into the radio, and someone doing that without permission would indeed be in violation of copyright.

I do agree that the methods used in older radios, where turning on a flag bit enables a feature with code already present in ROM, is beyone Motorola's control once the radio is out of their hands; further, a Motorola service shop which turned off those features would find itself in hot water in a hurry.

> Too bad there's no way to apply that to FUBAR...

Back when these things first got publicity nobody would say them correctly in print or over the air. So... When some higher management type said to the press, "Well, it appears to be FUBAR as they say." the reporter did his best to explain it meant; Fouled Up Beyond All Repair. An extention of FU for Fouled Up, and JANFU for Joint Army Navy Foul Up.

Language is funny, it used to be that our friend the "F-word" used to be the exclusive providence of "real men" and as such just wasn't spoken in front of the women or the general public. But when some term such as FUBAR was used, all the guys would stand around and do the "Know what I mean? Nudge nudge wink wink. Say no more!" routine.

Or as Archie Bunker once said, "Look here Meathead, when I was your age, you had to be in the Army to get free shots for that."

b> W2NSD is demanding that Lambda drop its legal action against
b> the American Radio Rely League. He also says that the group must
b> repay the ARRL all of the legal costs it has incurred before he
b> will ever again permit a Lambda ad to run in 73.

I read Wayne's editorials, and I was surprised to see him come to the defense of the ARRL on this issue. Just goes to prove that gays make strange bed fellows ;-) Wayne would rather get in bed with the ARRL! You won't see this happen very often.

I think that lawyers only belong in ham radio to safeguard our frequencies. Lambda's political agenda is tiring and too boring, even for ham radio. Gay rights are important, but give us break. It's only a hobby!! Use it to bring people together, not pull them apart. Lighten up!

On the other hand...
QST has a responsibility to all amateurs, gay and straight alike. Unless the ad Lambda wanted to run was somehow legally obscene, they should have the right to make themselves known if they're willing to pay for the privilege. Being a tax exempt organization, ARRL has even more of a responsibility to be open to all hams than a profit-making magazine.

I hope ARRL & Lambda can reach a resolution before the reputation of hams as being a group of "rich old-cw pounding-weather discussers" is expanded to include "bigots."

Look how much publicity Lambda has generated just by filing a lawsuit. They would have garnered considerably less if QST had just run their stupid ad.

My sad conclusion is that none of these groups have the best interests of ham radio in their hearts on this issue.

(there, that ought to offend just about everyone... the right wing, Lambda, ARRL, lawyers and Wayne Green)

Your activety will indeed have an effect on the company that makes the product. The FCC has been very good in using it's limited resources for maximum effect.

The most important change will be in the handling of future applications for certification for that company by the FCC. Rather than just accepting their data they will ask for actual samples and test them themselves. This process will go on until the FCC is convinced that the company is trustworthy, which in some cases has taken years.

The FCC will also keep a close lookout for the company at trade shows like Comdex. Their field office personnel are well trained in enforcement.

The company will almost certainly draw a fine. If its their first violation, it will be between 5,000 and 10,000 dollars. It could range up to 75,000.

Finally, under recent legislation, customs must check imported products for FCC approvals. They may be watching this company a little closer now.

All of this, taken together, has an inevitable affect on the company. They usually start making the FCC rules a priority, unless they are truly a fly by night.

My apologies for having to post this but...

Someone just recently posted a nice diagram and instructions for performing the jumper MOD on the FT-530. At that time I thought I would never have any use for it, but within three or four days I will be the proud owner of a FT-530.
So... Could someone please help out and either re-post it or e-mail it to me.
Thanks in advance

I am uneasy at the suggestion that people start calling the
FCC enmasse with allegations about part 15 violations. People
need to understand that individual subsystems (video cards,
network boards, etc) are FCC certified separately from the
system they ultimately are used in and often the test machine
is a somewhat quieter than average system. The individual can
do things to the system, too, that would cause it to flunk an
emissions test, ie using unshielded serial cables, performing
field CPU upgrades, running with the cabinet off, installing
motherboard upgrades, etc. It is not unconceivable that one
could put together a system whose individual pieces were all
properly certified, but the resulting assembly, if tested, would
not pass.

Note that I am not quite enough a Libertarian to say we should
not have regulations at all, but the current system is burdensome
enough that IMO we need not cajole the FCC into taking even more
action than it has. I rather like the idea of being able to
buy low cost iron (PC + peripherals) - if the Feds get into the
act, we usually all end up paying a lot more for epsilon better
services/merchandise.

Advice to the original poster (N2VNO): Jim, my gateway DX/66 does
get into some of the receivers in the shack here. Gateway does a
reasonable job of shielding. My advice is to do what the rest of
us do, ie go the Radio Shack and buy/install some ferrite chokes on
your serial/power/monitor cables, clean paint off the metal surfaces
of the case to ensure good ground, etc. IMO, you've gone about this
in the wrong way in calling the FCC.

It's too late to prevent that. Amateur radio seems to attract a lot of
people with strong opinions, and that seems to include a disproportionate
number of bigots. Just read this group for while, and it's difficult not
to come to that conclusion, and less so on the equal treatment issue than
on many other issues, cw being perhaps the best example.

>Look how much publicity Lambda has generated just by filing a lawsuit. They
>would have garnered considerably less if QST had just run their stupid ad.

Yeah, kinda neat, huh? The ARRL seems to have been doing a lot of things
recently to make themselves look bad, like their attacks on the QCWA and
W5YI. ARRL runs its day to day operations quite well (as represented by a
number of ARRL employees and local officers on this forum), but they seem
to be getting off track on policy issues. They should never have gotten
themselves involved in these issues in the first place.

>My sad conclusion is that none of these groups have the best interests of ham
>radio in their hearts on this issue.

I'm sure that everyone *thinks* they do. They'd probably think that *you*
don't have amateur radio's best interests at heart when you disagree with
them.

>(there, that ought to offend just about everyone... the right wing, Lambda,
>ARRL, lawyers and Wayne Green)

I don't know either Wayne Green or Jim Kelley (from Lambda) personally, but
from what I've read by Wayne and heard about Jim, they're a perfect match.

3399. Problems charging after market battery with Yaesu NC-15 charger

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-10 23:11:26 UTC
From: mwiz@austin.ibm.com
Message-ID: <CEpF32.3v6x@austin.ibm.com>
Source record: 275223
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi folks,

I cannot charge my after market battery in my Yaesu NC-15 charger.
The battery is from W&W Associates and has a 1000 mah/hour capacity.
Batteries from Yaesu will charge. When I drop in the after market
battery the quick charge light does not come on.

The problem is not with the battery since this is the third after
market battery that I have tried.

I finally got access to another NC-15 charger and the quick charge
light does come on.

Is there a newer version of the NC-15 that handles these batteries? Or
is there a mod to my NC-15 that I can perform to make it charge these
batteries? I'd really not dish out the money for a new charger.

Any help would be appreciated. I've checked the various archives
and have found no pointers toward helping with this problem.

Thanks,
Marc WA6HBR

Oh boy! The start of the same thread we had 6 months ago. Here's a VERY conservative point of view (warning: I am not politically correct!)

If a band of child molesters or a group that practices beastiality (sex with animals) wanted to place an ad in QST I would hope the ARRL would firmly say `NO!'. Now, from what I see here on campus, the gay lifestyle means two or more men getting together and performing anal and or oral sex on each other in the men's restrooms; I won't even begin to describe the stains they leave on the walls of the toilet stalls. Whether one is a molester, `loves' animals or is gay it still means subscribing to a deviant and nauseating behavior. Many states still have anti-sodomy laws on the books; why should QST or any other magazine be forced to advertise a special interest group who's actions clearly violate the law's of a state in which the magazine is being sold?

Well, I've had my new Tech license for a couple weeks now, but I haven't had much of an opportunity to use it seeing how I'm a starving college student with no money to buy a righ right now. However, I'm saving up but I want to make sure I make the right choice...

I go to school in Santa Barbara, CA, and I have a lot of friends (hams) who live in Orange County, CA, about 150 miles south of here. They've all established themselves with 2 meter and 440 band radios. One of them just bought a 220 mhz rig, and is trying to persuade me to buy one also because all of Calif. is covered by the Condor linked repeater system, which lies on the 220 band. Sounds like a cool idea to me (saving up for a 220 rig) but the problem is, they're real expensive.

I was initially thinking of starting with a dual band HT (like the Alinco DJ580), but now my friends are saying that the 440 band sucks unless you join a private repeater club or just want to use it for a scanner. They say that 220 is a lot better (but unfortunately there is no such thing as a cheap 144/220 HT). I'd love to put 220mhz in my car so I can talk to my friends back home on Condor, but I think it's more necessary to get a 2m rig before anything, just because of it's popularity. I want to be able to meet people. This presents a new problem because there are very few dual bander mobile units with 144/220 bands. Theres the discontinued Kenwood 631, and also I know there's an ICOM, but ICOM is too expensive. Should I start out with a single band 2m and then just buy a single band 220 later and have 2 radios in the car? Or do you think just starting out with a single band 220 in the car is just as good?

Why does this ham stuff have to be so damn expensive? :) CB radios were so cheap by comparison (yeah yeah I know, CB sucks to all hell.. :)

Thanks in advance...

I would like to know what is the interest of AM on HF bands? I have
nothing against it, but there seems to be more and more AM operation
lately. I do have a rig that transmits AM (FT-102) and have tried it.

Are there nets that uses AM modes, when and where are they?
I have found only one net on 3.870 so far, but had found some
activities on 7.160 and 1.850.

Just thought I get a feeling of the foundness of AM mode of operation.

>Your friends the Smith Chart and the coax loss tables can give you
>accurate results with any random length of feedline.
>Gary Coffman KE4ZV

Gary, assume 100 ft of RG-58 transmission line with a measured SWR of 1.6 at the 100 watt transmitter end on 17 meters. I suggest that the SWR at the antenna feed-point could be anywhere between 2/1 and 100/1 with transmission line LOSSES anywhere between 37 watts (2db) and 75 watts (6db) and no one can tell the difference at the transmitter end. I don't know any way to tell the difference without measuring the SWR at the antenna feed-point, measuring the amount of radiated RF power, or calculating the feed-point SWR based on a program like ELNEC. I think 99% of hams would be surprised at the results. Simply changing from coax to ladder-line on my G5RV doubled my radiated power while making my transmitter-end SWR a lot higher.

Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL, IK2SGC, JE1CKA, JG1EGG, OH1NOA, N3IDP, K4CEF & Southeastern Cluster Group, K8YSE and K9AJ for the following DX information.

30 METERS (ZONE 12 - RARE!). Did you realize that Zone 12 is rare on 30 meters? Reason: According to Cecil, CE2EZE, 30 meters operations are not permitted in Chile, including its islands. Since Chile and its islands are the only countries in Zone 12 (other than Peter I Island and/or maybe possible activity from the Antarctica in this Zone), 30 Meter Worked All Zones is not possible at this time.

3Y, PETER I ISLAND (UPDATE). The Peter I Island expedition is still a "GO" for early next year, states Tony, WA4JQS. Everything is still on schedule so far. Tony states he has equipment for 5 HF stations, 2 tri-banders, 3 monobanders, a 40m beam, a Gap and a Battle Creek Special, 4 Alpha amps and 4 4KW generators! There will be one rig dedicated to RTTY only, and they plan to be on RTTY on all bands. They also have satellite and EME gear in the works. The operation is planned for 16 days. He also stated that the ship they will be using is now in Germany being loaded and ON6TT is handling details from that end. The equipment will be shipped south later. Their food supplies are being shipped this month from England to the Falklands. Also, they have all new tents (Winterhaven units that cost about $4K each) and says these are Antarctic tested! They are still looking for a good CW op. The QSL setup will be same as before, AA6BB and KA6V. It was reported, Tony and others would be assembling antennas this past weekend.

4W, YEMEN. Here is the latest word on the 4W operation where the DXpedition team was headed by UA4WAE and KK6H. It was previously reported that the 4W authorities refused permission of an operation if there were Americans involved. So it is reported now that KK6H has dropped out and the operation will now take place October 15-24.

9M0S CARDS. Contrary to what was reported a short while back, the cards and labels for the 9M0S QSLs have not been printed. There is some sort of a problem that will be resolved shortly. About 20,000 cards have been received so far to be processed. There is no further information available at this time.

9U, BURUNDI. Baldur, DJ6SI, is reportedly active as 9U5DX. He was heard this past weekend on 24892 kHz at 1413z, 14025 kHz at 2050z and 18081 kHz at 2057z. His length of stay is unknown at this time. QSL via DJ6SI.

ET, ETHIOPIA. ET3BH has been quite active on 12, 15 and 17 meters. His operating time seem to be between 1230 to 1400z and again between 1730 to 2000z. Check around the following frequencies (+/- 5kHz): 18077, 18140, 21028, 21295 and 24947 kHz. The operator is, Bertel, SM3HLL, and he expects to be there until January 1994. QSL via his homecall.

FR/G/T, REUNION, GLORIOSO, TROMELIN ISLANDS. FR5ZQ, now on Reunion, is reported to have mentioned he would like to be active in January 1994 from Tromelin, and from Glorioso sometime in July or August 1994.

IM, SARDINIA (EU-041). The ARI Milano DX Team will be active from Maddalena Island and probably from Caprera Island from October 14-19. The call sign to be used will be IM0M or IM0MI. The DX team plans to be active on all HF and WARC bands (check IOTA frequencies), VHF and CW/SSB. QSL via the bureau to IK2QIN or direct to: I.M.C.O., P.O. Box 99, 20101 Milano, Italy. The ARI Milano Contest Team will also be active during all the most important HF contest CW/SSB as II2M. QSL Manager is IK2SGC.

KC6, REPUBLIC OF BELAU. The members of the Kenwood Amateur Radio Club will be active from here November 19 to 23. They will be active on 160-6 meters (including the WARC) with CW, FM, SSB and RTTY. The KARC members will be using the following call signs: JQ1VNM/KC6KM, JH4BGH/KC6HY, JN1ATL/KC6KA, JG1EGG/KC6OM, JK7EIG/KC6NH AND JK1QHK/KC8SH. The group will be using a 8 element Yagi for 20/15/10 meters, a 3 element Yagi for 17/12 meters, a full size dipole for 160/80/75/70/30 meters and a 4 element Yagi for 6 meters. There will be 3 stations active with a KW amp. QSL Manager will be JK1QHK.

KH0, SAIPAN. Tack, JE1CKA, has informed everyone that KH0 will be active in both the CQ World-Wide Phone and CW Contests. The Phone crew (AH0K) will be active as Mulit-Single on 80-10 meters (160 meters is possible). The operators will be: JA9VDA(AH0O), JP1JFG, JF3NRI(N9KAU), JL2TLC(KH0AZ) and JH7QXJ. The CW crew (call sign unknown, possibily AH0K) will be active as Multi-Multi on 160 to 10 meters (with activity on the WARC bands after the contest). The operators will be: AH0K, JE1JKL(NH6J/9M6NA), JR7OMD(WI3O), JE7BIZ (AH0AK), JE2JCV(WH6CQ), JL2TZC(KH0AZ), JG2BVO(KD1AJ) and JP1OGL. QSLs for both operation will be handled by JF2PZH via the bureau or direct to AH0K, Kenny Sakurada, 4-506 Honjigaoka 1701, Moriyama, Nagoya 463, Japan.

OJ0, MARKET REEF. The club group OH1AF will try to activate this one from October 29th to November 1st (weather permitting), during the CQ WW SSB Contest. A special call sign of OJ0M will be used during the

contest. There is a possibility of some CW and WARC band operations. Operators are OH1MDR, OH1MRR, OH1NOA and co. QSL to OH1NOA, Timo Klimoff, Metsakulmanraitti 292, FIN-28760 PORI, Finland or send to the bureau is OK.

S2, BANGLADESH. John, PA3BTQ, is in Bangladesh and plans to be active during the months October and November. Reportedly, he has been on the air, but has not received his official S21 callsign. There is a possibility he may be traveling to India for a short time due the situation in S2-land, but he will be returning to Bangladesh. His home base is Dacca, but he travels a lot within the country and frequently signs /M or /P. His schedule does not allow much time to operate at the moment, although he does have a TS-50 with an antenna tuner, a mobile antenna and a multiband dipole. His call will be announced as soon as it becomes available. The frequencies to look for John are: SSB -- 14315 and 21315, CW 14015 and 21015, PACTOR/AMTOR 14065/090 and 21065/090. QSL via PA0EQ.

TY, BENIN. Sigi, ET3IJ, who is now active from Ethiopia, was heard saying that he will be signing TY1IJ in mid-November.

CQ WW SSB CONTEST - OCTOBER 30-31 (Members from the Frankford Radio Club that will be active)
SENEGAL - Richard/K3IPK will sign 6V6U. QSL via K3IPK.
MARIANA ISLANDS - Tony/WB2P will be active as WB2P/KH0 and Multi OP with KE2PF.
ARUBA - John/W2GD will sign P40W. Will run Single OP and all bands. QSL to N2MM. Randy/AA2U will be active QRP on all bands. His possible callsign may be P40C, P40QRP or P40Z.
NETH. ANTILLES - W3UM, WA3LRO, KB2XZ and others will be active as PJ1B in a Multi/Multi effort.
MARTINIQUE - Doug/N3ADL will be active as TO5MM or TO5MI. All bands and QSL via N3ADL with SASE.
ST.KITTS - Alex/K2DOX will be active as V47KP. QSL CBA.
BR. VIRGIN ISLANDS - Angel/WA2VUY will be active as VP2V/WA2VUY.
TURKS & CAICOS - Jack/N2VW will operate Multi/Multi as VP5N with WB2YOF and K2TD.
CANADA (ZONE 2) - Bill/K2NJ and Don/NR2H will be active north of the boarder as VX9DH.

DXCC NEWS. The ARRL AWARDS Committee has voted Eritrea to be reinstated with an effective date of May 24, 1991. The DXCC Desk will accept QSL cards for Eritrea starting January 1, 1994. QSL cards received at the DXCC Desk before January 1 will be returned without action. Those who have credit for the pre 1963 Eritrea (ET2) need not resubmit cards.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS

online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

ANARTS meeting

The next meeting of ANARTS will be on Friday 15th October at
7.30 pm. We hope to see the Sydney members coming to the
meeting. We have tea and coffee afterwards while we all
indulge in ragchew. Please contact Jim VK2BQS on 631 3560, or
Col VK2CTD on 524 3989, or Pat VK2JPA (wk) 230 3722 if you are
going to attend.

Come along and meet the other ANARTS members, or even join the
Society and watch us grow.

Results of the ANARTS WW RTTY Contest part one

Please note - the results are being published here in advance
of the contestants official notification. These should reach
contestants shortly, together with certificates earned in the
contest (as soon as Jim has his handwriting working well, hi
hi).

Summary of activity

Solar activity was moderate on 27th September, and low for the remainder of the period. There were two M1 flares on 27th.

The geomagnetic field at Learmonth (WA) was quiet to active on 24th, and quiet to unsettled for the rest of the week except for a period of active levels 0900-1800 UT on 29th.

Ionospheric F2 critical frequencies at Sydney were mostly near predicted levels with some depressed periods of up to 25 per cent from 24th-26th September. On 27th-28th the field was depressed by up to 30 per cent during daylight hours. Conditions on 29th saw depressions of up to 35 per cent during local night, and on 30th the field was mostly depressed by up to 50 per cent. Spread F was observed on 29th-30th September.

Forecast for the next week (01 - 07 October)

Solar : Low to moderate.

Geomagnetic: Quiet to unsettled.

Ionospheric: Near predicted to 20 per cent depressed. Possibility of night time Spread F degrading F layer communications, and fadeouts on daylight circuits affecting lower frequencies.

3409. Saturn and 2 meters

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-11 04:24:00 UTC
From: steve.gross@cencore.com
Message-ID: <6e.1145.332.0N665978@cencore.com>
Source record: 275144

In Message-ID: <CEn8nn.EuG@world.std.com>,
Sharon, KC1YR, asked:

SS> Just wondering if anyone out there has experience using/installing
SS> 2-meter equipment (or HF, for that matter), in a Saturn.

Sharon, I bought an SL-2 last March and obviously had the very same question. So before I committed to the purchase I decided to try out their toll-free information number. The person who took my call frankly admitted he didn't know, and asked if he could transfer me to someone who had more experience with the electronics in the car. Of course I said yes.

I was put through to another fellow and I repeated the question. His immediate reply was there would be no problem. Saturn's only caution was that the power to the rig be run directly from the battery; don't try to splice into the existing wiring.

So far he's been right on both 2m and 440. Hope this helps.

> services/merchandise.

I am not advocating running to the FCC over every little problem,
and I fully realize that properly compliant individual systems,
when combined, may cause interference that is not the fault of
the manufacturer. But the original poster described a situation
in which the manufacturer had apparently blatently ignored even
minimal precaustions, and you will recall that he _did_ try to
deal with the manufacturer directly _before_ going to the FCC.

I disagree that FCC compliance will result in more expensive
euipment. Even you admit that dealing with the problem is often
as simple as installing a bead and/or scrping a bit of paint and
re-tightening a screw. It would not add much at all to the cost
of producing equipment for the manufacturer to take care of that
at the outset ... in fact, it will probably save the manufacturer
money in that it will reduce the number of complaints to be
dealt with after the product is in consumer hands.

Also, cost is not measured only in terms of the retail price to
the one who buys the piece of equipment. What about the potential
interference experienced by all of us? I don't believe that
I should be forced to suffer telephone interference (or even
difficulty pulling out a weak CW signal) merely so that my
neighbor can save a buck or two on a piece of computer equipment.
And it is not just computers and peripherals ... it is all sorts
of electronic equipment. Further, you must remember that the
vast majority of consumers have neither the expertise nor the
inclination to "go to Radio Shack" as you suggest and make even
minimal modifications to purchased equipment. And why shoud
they? That is the manufacturers job.

I do not believe in throwing Government regulation and
intervention at every conceivable societal ill ... but I do
believe that the first line of attach on RFI in a society that
is inundated with electronic devices must be the manufacturers.
I believe this in general, and I particularly believe this as

a ham. (We hams, operating legal and fully compliant systems, are frequently blamed for RFI that is actually caused by the ineffective shielding of consumer electronic devices.)

I think the original poster did the right thing. He first went directly to the manufacturer, who chose not to help. Only then did he go to the FCC.

>Batteries from Yaesu will charge. When I drop in the after market
>battery the quick charge light does not come on.

I have had similar problems with ICOM chargers and W&W 13 volt batteries.
The problem was caused by the ICOM chargers putting out 11 volts as measured
across the battery contacts on the top while bottom charging the battery.

The W&W charger did not have the same problem. BTW, I recently saw 12 volt
chargers for ICOM batteries at a hamfest. They were being sold by an oem
battery vendor who claimed that ICOM chargers would not properly charge
the higher voltage batteries.

You may have a similar problem.

:: is not to say "break", it's to sign with your call. This was to make
:: sure the breaker HAD a call.
:
: Nonstandard operating mode? I wouldn't say that - I've encountered
:quite a few areas around the country (including my home, Rochester, NY)
:where this is a conventional way of getting into a conversation.

That's a problem unless one understands the rationale behind it. I was
in Palm Springs back a while, trying to break into a conversation because
I had some information they were missing, and kept signing with my call
instead of just saying "break". They either were snobs (probably not) or
I was out of place by signing my call to break in (more likely).
What I meant is that it's no longer the same all over the country.
There are "islands" where a "break" may get one ignored, just because of
the regional situation (in our case, Sears selling rigs that looked just
like CBs, down to the 23-channel switch, to anyone who walked in the store
or read the catalog). There are also places where signing one's call gets
the breaker ignored. So go figure...

Yes, that would be a clear cut case of piracy. However, it does offer
an interesting market for third party firmware. We've seen some of that
in amateur gear with the replacements for the Icom firmware in battery
backed RAM that adds functionality such as more memories, better scanning,
etc.

>If a band of child molesters or a group that practices beastiality (sex
>with animals) wanted to place an ad in QST I would hope the ARRL would
>firmly say `NO!'.

There's a difference... gays are (presumably, on-campus) consenting adults.
Your attempt to link consent with rape is neither valid nor very intelligent.

Just because I personally find it repulsive doesn't mean I believe in dis-
crimination. If it doesn't affect job performance (which it doesn't from
what I've seen), then jobs should be open to all. If consenting adults want
to have "weird" sex where I don't have to see it, fine. If gay hams want to
advertise an organization in QST, let 'em. It's not hurting me or my family.

I can always skip over the ad if I don't want to look at it. Nobody's forcing
me to call them & join up. (OTOH, I don't think I'd accept a free membership
either.)

Wayne's last article was confusing to me. He's usually careful about making
himself clear; his Lambda-basting bordered on the incoherent. It seemed to
me that he was trying to argue from both sides of the fence, and the result
was a complete jumble. If what I heard/read was right, that the ARRL backed
down and offered ad space to Lambda but Lambda continued with the lawsuit,
then I agree Lambda has become the bad guy. (I'm sure I'll hear about it if
"that turns out not to be the case.")

No it's not! You're not doing it for any monetary gain. And you DO own the unit. Tamper away! As long as you don't change the code around and then try to sell it off as your own, it doesn't violate copyright laws.

I'm glad you're not in charge of enforcing the law... we'd all be in trouble then. (Forgive us Hamtronics for we have modified your REP-200 firmware to add features such as paging, cw AND voice ID, etc.)

Lets get up to date.

Dell is now marketing through retail stores (e.g. COMP USA), as well as Apple.

Gateway offers a lot of value (price, performance, quality and support), still sells direct but spends a ton of money in advertising.

Tentec does not fit into either of these marketing models.

}In article 17669@lmpsbbs.comm.mot.com, burke_br@adcae1.comm.mot.com (Bruce Burke Sp App)
writes:
}|In article 4636@anomaly.sbs.com, kd1hz@anomaly.sbs.com (Michael P. Deignan) writes:
}
}|}If I know that changing byte 3, bit 6, from a 0 to a 1 enables full-band
}|}receive on a Motorola radio, and a local public-works department hires
}|}me to modify their radios, I still fail to understand how this is a
}|}"crime".
}|
}|Because you have given the customer something he hasn't paid for and
}|you are making a living from it.
}
}Wait a minute. If the customer has paid Michael, then they aren't getting
}something they didn't pay for. ;^)
}
}You seem to be saying that Michael is "selling his brothers horse". I am
}not convinced this is the case.
}
}If only Motorola can sell you something, then clearly Motorola must be the
}owner of that something, or must be given the authority by the owner to
}sell it.
}
}What that something is, in this case, is the right to transmit and recieve
}on frequencies that are blocked on the customer's radio because of the
}software in the radio. Now it seems to me that as long as the customer
}has a valid FCC licence for those frequencies, the customer has the right
}to broadcast and recieve on those frequencies. Motorola cannot sell a
}right (or a privelige) which the FCC has granted.

This was a bad example. If a customer buys a radio minus a certain feature that
would have to be paid for, then the customer finds someone who can add it
by hacking the software - that's where the violation is.

Bruce, WB4YUC
}
}On the other hand, it may be argued that what Motorola is selling is a
}service. The service of modifying the radio. Now what law would grant
}to Motorola the sole right to that service?
}
}Copyright law? I don't believe it!
}Patent law? Certainly not!
}
}Laws governing trade secrets? Yes, only if those trade secrets had been
} violated by the servicing party. This should cover the case where

} someone stole the technology and sought to make a profit?
}
}Laws governing contracts? Yes, if the sale contract stipulated that only
} motorola had these rights, and if such contract were held valid in
} the state of the customer.
}
}(Usually if information is public knowledge, it can't be considered a trade secret.
}like magazine articles etc. In other words if John Q Smith, happens to have figured
}out that he can change an address and extend the coverage how has he violated any
}agrement to maintain a trade secret?)
}
}
}
}|Yes copyright laws do apply when it comes to altering computer code and
}|then ytrying to make a living from it. And while we are at it -
}|every time you sing Happy Birthday, technically you owe someone a royalty
}|because that somg is copyrighted! As for books, go ahead and pull a chapter out of
}|one and try to republish it with your name on it and watch what happens!
}
}We are not talking about republishing or copying. We are talking about
}modifying a legitamately obtained copy.
}
}Even in the case where we are talking about making copies:
}
}No you cannot modify a song or a book and then publish it and make money.
}That would be a violation of a copyright. What you can do is start over
}from scratch and write your own book and sell that.
}
}(I can't believe any copyright law prohibits anyone from reading
}a book aloud or singing a song aloud. Of course we could get into
}freedom of speach issues here.)
}
}|tweaking a circuit is one thing.
}|
}|Messing with the computer code for profit is another.
}
}Why would software be more protected than hardware? Hardware can be patented
}and software (generaly) cannot. Patents (generaly) offer more protection than copyrights.
But even Patents do not prohibit the customer from making personal modifications, or hiring
whoever they please to make modifications.
}
}Does Motorola become offended if customers hire third parties to modify the
}hardware in their radios? Suppose they could extend the transmit range?
}Have they obtained something they have not paid for? What then?
}All they have bought from Motorola is a radio! (Unless they also bought
}a contract for certain services as with cell phone, where a modification
}of a radio might well give them access to services they have not paid for.
}This is another issue. I have not seen any postings that indicated that
}this was the source of the concern behind the QST add.)
}

}
}|You are the one who needs to study, you obviously don't understand what the issue is.
}
}We would be happy to have you enlighten us. ;^)
}
}|There are all kinds of protected items within a radio. Proprietary IC's are one.
}|So is the competer code which makes the radio what it is. When you buy a radio
}
}But how far can that protection extend? Can it prohibit someone else from
}writing competetive computer code? Not by copyright! (IBM would have loved it
}if the only software that could legally run on the IBM PC were IBM software!)
}Can it prohibit the owner from making a modification? Not by patent.
}
}|that is driven by a micrprocessor and computer code, you are not buying the code
}|and that is where many people think they know better. You are merely being
}|licenced to use it. The company still retains ownership of it. Just like
}
}Yes contracts, leases, and licences can provide some protection. It seems
}that perhaps the only way out of this mess is for a third party to write and
}sell their own software designed to run on Motorola radios. ;^) As mentioned,
}some recent Supreme Court decisions have seen a limit on this protection,
}like with restrictions against reverse-engineering.
}
}|going out and buying sheet music or a book.
} ^^^^^ ^^^^^ ^^^^
}Hmm, can a book publisher prohibit you from making notes in the margins of a
}book you buy or sheet music? Would the Court dare go that far?
}
}
}I won't be surprised at all if this ends up in the Supreme Court! (No, I don't
}intend to be one of the litigants. ;^)

}> modifications, I am sure DEC wouldn't mind if I post if to the Internet.
}>
}
}It is your software. You bought it you can do what ever you want with it.
}If the license agreement with DEC says that you are not allowed to modify
}the OS to increase the number of users then doing so will be illegal.

Wrong, you don't own it. DEC owns it, you are only licensed to USE it!
}
}I assume that when you bought the IBM software you bought a 1 year site license
}so after a year it is illegal to use the software regardless of the
}modifications you made.
}
}When you buy a Motorola radio
}are you buying the radio not a license to use a number of the radio's features.
}
}> Nobody is going to write new Motorola radio software from scratch. There
}> is no way that they would make enough money from it to recoup their
}> Engineering investment. As for doing it as a home project --Find a team of
}> 100 software engineers who want to spend their personal time behind a work
}> station for a year. I won't be volunteering for that assignment.
}>
}Motorola did not pay millions of dollars to write the software. They went to
}the local Radio sack and they bought a DPS and a D/A chips. then they
}took the chips and put them in the radio. Then the bought a book from the
}local bookstore about signal processing algorithms, and they implemented
}these algorithms.
}
}They hired 2 engineers, propably EE grad students, and they pay them
}$4.65/hour to write the code. It took these 2 people a few months to do
}the work.
}
}In any case you do not need 100 people working for a year to implement the
}features people will pay lots of money to get.

Phuleeze, get real...
}
}
}> Motorola doesn't have a problem with business radio equipment being used in
}> the ham bands or with hardware field modifications to the equipment. The
}> problem is people hacking software to turn on features which Motorola paid
}> to write, but that the customer hasn't paid to use.
}
}If Motorola includes in the radio a piece of paper that says, "by opening this
}package you agree not to modify this radio in any way" then it will be illegal
}to do so. If Motorola does not include it then it is very legal, or it should
}be, to modify the radio.
}

It's included both in writing and imbedded in the code - in plain english!

WB4YUC
}
}> I have seen cases
}> where the software interactions from having several features turned on that
}> were never designed to be used together caused equipment or system
}> problems. Not to mention that changing codeplug bits in a radio is a good
}> way to wind up with a radio that will only power up and display the error
}> "FAIL 01/82" (corrupt radio EEPROM).
}> --
}> John Gilbert johng@ecs.comm.mot.com Motorola SmartZone Trunked
}> Systems
}
}Most equipment I used include labels of the form, "if you break this shield
}the warrantte is voided." Motorola can include a label that says "if any
}modifications are done on the radio the warrantte is voided."
}
}In the old days of single sided floppy disks, people used to cut a hole on the
}side of the disk to use it as a double sided disk. I have heard of computer
}companies buying 25 Mhz CPUs and using them as 33 Mhz.
}People modify car engines all the time to make them more powerfull.
}
}And of course we must not forget that if it was not for people who
}reversed engineered Intel CPUs a 8088 PC compatible would still cost $3000
}and a math coprocessor would still cost $900 instead of $89.
}
}If Motorola wants people not to use it's equipment then it can do what
}INTEL does with its CPUs. Deactivate some of the hardware features of the
}device.
}Then Motorola will be able to make lots of money by selling the equivalent
}of an intel overdrive CPU to its customers and be hated like INTEL

}>
}>Yes copyright laws do apply when it comes to altering computer code and
}>then ytrying to make a living from it. And while we are at it -
}>every time you sing Happy Birthday, technically you owe someone a royalty
}>because that somg is copyrighted! As for books, go ahead and pull a chapter out of

}>one and try to republish it with your name on it and watch what happens!
}
}No. Copyright applies if one were to make *copies* of the code, modified
}or not, and attempt to sell them, or even give them away. If you modify
}the *original* purchased copy, you are not in violation of copyright. As
}an example, I can buy a book, say the ARRL Operating Manual, which is
}copyright. I can then tear pages out of it in order to start a fire in
}my fireplace. That's not a violation of the ARRL copyright. Or I can
}insert additional pages in the book, remove pages from the book, or alter
}the contents of a page in the book. None of these actions, any of which
}may make the book more useful, are violations of the ARRL copyright. The
}same applies to computer code. Nothing in copyright law requires an end
}user to leave the code unmodified. The only thing copyright does is
}prohibit others from selling unauthorized *copies* of the code. That's
}where the "copy" in copyright comes from.
}
}Musical copyright is somewhat of a special case since each *performance*
}of the music generates a new *copy* of the song, however transitory.
}The courts have ruled that this does *not* apply to computer code since
}in_menory copies are an integral part of the operation of the code.
}Otherwise, every time you load your text editor, you'd be violating
}the publisher's copyright.

Source record: 275164

At the risk of truncating what could become a bandwidth-busting topic,
let me suggest the most simple method to resolve this problem: TEST IT!
Oh yes, I left out the most relevant detail- TEST IT ON ONE OF YOUR
TEST DRIVES BEFORE YOU BUY THE CAR!
Take your rig, mag-mount antenna, and a lighter plug power cord with you
when you visit the dealer. Plug in the rig, start the prospective car,
DO NOT TAKE IT OUT OF PARK or neutral & keep foot on brake, then key
the rig. If the vehicle exhibits any unusual symptoms, such as stalling
or acceleration, be very careful if you decide to go any further. The
next step is to put the car in gear and take your foot SLIGHTLY off the
brake. Key the radio, see if you rocket forward or stall out. Step 3 is
is similar but on a lightly traveled roadway at multiple speeds, and
should include coming to a stop and starting from a stop.
If your vehicle passes all these tests and the salesman still wants
to make the sale, take the car back to the dealer and ASK THEM about
their warranty when your radio is used in the vehicle. If they tell you
that there is no limitation, insist that they put that statement in ink
as part of your purchase agreement.

LICENSED ATTORNEYS SPEAKING AMATEUR RADIO PLEASE TAKE IT FROM HERE!

You've done the tests, so if you still like the car and the dealer, do
your part to improve the economy. Obviously, if the vehicle or dealer
failed any part of the above testing process, find another and restart!

I've had my Kenwood 741 mounted in my Saturn SC2 for the past 6 months with no problems at all. It puts out 50 watts max., and I have yet to discover a problem with any of the electronic equipment that came stock or as an option in the car. Similarly, no problems on 440 either. Good luck!

: machine to which it didn't apply.

Shades of gray. What we don't know is whether the
reseller upgraded the DX-25 system (that carried the sticker)
to a DX-66 system. Many of these systems are built in
the Pacific Rim and then personalized after shipment into
the US. I realize there is a pervasive 60 minutes attitude that
industry is bad, but leaping to conclusions like this is
potentially damaging to companies and ultimately to the
real people that work for them...

Of course, it would be a boon to the EMI compliance testing
industry if we instituted yearly EMI pollution tests that
every PC had to go through once a year, just like an automobile :-)

: > buy low cost iron (PC + peripherals) - if the Feds get into the
: > act, we usually all end up paying a lot more for epsilon better
: > services/merchandise.

: I am not advocating running to the FCC over every little problem,
: and I fully realize that properly compliant individual systems,
: when combined, may cause interference that is not the fault of
: the manufacturer. But the original poster described a situation
: in which the manufacturer had apparently blatently ignored even
: minimal precaustions, and you will recall that he _did_ try to
: deal with the manufacturer directly _before_ going to the FCC.

Bob, lets say I walk into a reseller and purchase a properly
certified DX-33 along with a DX-66 cpu chip. I ask the reseller
to install the DX-66 chip and she does. I take the system home
and find it radiates wideband interfence all over 20m cw band.
In the case, I think you would agree that the original mfg
is probably not to blame for the EMI problem. Just this sort
of thing happens all the time at the reseller level. If the
original poster was dealing with middle distribution, then of
course they are not going to be able to talk nuts and bolts
RF - they are reselling a system they probably purchased from a
mfg in the Pacific Rim. Yes, the system should have been
recertified with the DX-66 but I argue that crucifying the mfg
is not exactly right in this case.

: I disagree that FCC compliance will result in more expensive
: euipment. Even you admit that dealing with the problem is often
: as simple as installing a bead and/or scrping a bit of paint and
: re-tightening a screw. It would not add much at all to the cost
: of producing equipment for the manufacturer to take care of that
: at the outset ... in fact, it will probably save the manufacturer
: money in that it will reduce the number of complaints to be
: dealt with after the product is in consumer hands.

Oneies iterative solutions do not always scale to something
reproducible on the production line. If you have to meet
tighter radiated emissions standards, that takes better

shielding which in turn costs money. In a couple of digital
hardware projects I've worked on, we specifically went with
multilayer boards to deal with possible emissions problems.

: Also, cost is not measured only in terms of the retail price to
: the one who buys the piece of equipment. What about the potential
: interference experienced by all of us? I don't believe that
: I should be forced to suffer telephone interference (or even
: difficulty pulling out a weak CW signal) merely so that my
: neighbor can save a buck or two on a piece of computer equipment.

Yes agreed. I would add that society ought not to suffer
monetarily to meet the needs of the weak signal amateur
community, however. I say this speaking less as a ham but
as a taxpayer who is tired of seeing a lot of money poured
down the drain to serve special interests I have no part in.

: And it is not just computers and peripherals ... it is all sorts
: of electronic equipment. Further, you must remember that the
: vast majority of consumers have neither the expertise nor the
: inclination to "go to Radio Shack" as you suggest and make even
: minimal modifications to purchased equipment. And why shoud
: they? That is the manufacturers job.

Provided the consumer does nothing to violate the original
design of the equipment!

: I do not believe in throwing Government regulation and
: intervention at every conceivable societal ill ... but I do
: believe that the first line of attach on RFI in a society that
: is inundated with electronic devices must be the manufacturers.
: I believe this in general, and I particularly believe this as
: a ham. (We hams, operating legal and fully compliant systems,
: are frequently blamed for RFI that is actually caused by the
: ineffective shielding of consumer electronic devices.)

We agree in principle, but differ in methodology. I would
rather see a sliding fee schedule where a manufacturer
could sell small quantities of equipment, avoid burdensome
compliance testing at the cost of a relatively high (EM pollution?)
fee per system. Higher volume products that are pretested and comply
would pay no per system fee. As things stand, testing is a
burdensome cost on small companies.

: I think the original poster did the right thing. He first
: went directly to the manufacturer, who chose not to help.
: Only then did he go to the FCC.

Perhaps, but I would have gone another round with then, ie telling
them that I was going to notify the FCC.

>Packet - KD6KGJ@n6qmy.#nocal.ca.usa.na
>------------------------------

I think this is it. I know what you mean about saving mods. I usually keep
them because I never know when I may stumble across the radio. I too will
be getting one within the next two days. Paid $399 it:

========================== As-is from Internet ==============================

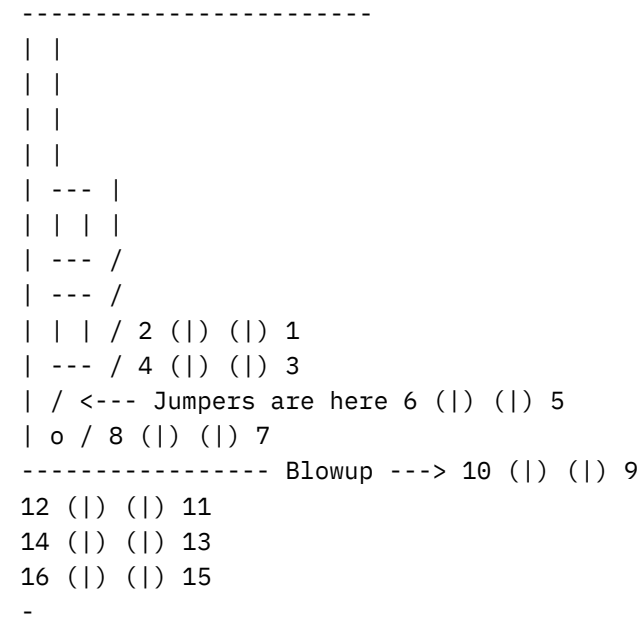
YAESU FT-530

Expanded Receive 110-180, 300-500 MHz
Expanded Transmit 130-180, 400-470 MHz

NOT LEGAL IN U.S.A - FOR EXPORT ONLY

o Remove Antenna and Battery.
o Remove four screws on bottom holding battery track.
o Remove the four (black) screws holding rear case.
o Slowly... open the front cover from tranceiver and lay both halves on table.
o Note positioning of white paper insulator in right half of radio and lift out
(don't throw away)
o Carefully locate Jumper Pad 13 and remove solder.
o Re-install white paper insulator, make sure ground tab slides through the
paper insulator.
o Close radio back up (Careful not to pinch the ribbon cable near lithium
battery when closing halves).
o Re-install the four (black) screws holding rear case.
o Re-install the four (small silver) screws on bottom holding battery track to
radio body.
o Attach Antenna and Battery.
o Turn off Radio.... Press and hold both arrow keys while turning on the Radio.

o Modification Complete.



In side the rig, it really did not look quite like that ... more like this:

... 12 (|) (|) 11
(|) 13
16 (|) (|) 15

In addition to the published receive expansion, it also receives 800-950 MHz...
trunking radio, cell phone, 33cm ham band...

Have fun!

>We are not talking about republishing or copying. We are talking about
>modifying a legitamately obtained copy.

If Motorola's software is shipped on an EPROM, or (worse) a masked ROM, you certainly have to make a new *copy* to have different firmware; the old one, purchased legitimately, isn't *modified* (note that if you erase the EPROM and reprogram it, you've destroyed the original copy and made a duplicate from another (modified) duplicate you had lying around). "Fair use" covers making *partial* copies of works, generally for either personal use or for review purposes; you may not copy an entire work (except for very short works, like a three-line poem -- it would be very hard to do a critical review of a haiku quoting just the first two words).

>(I can't believe any copyright law prohibits anyone from reading
>a book aloud or singing a song aloud.

It most certainly does prohibit "public performances". Singing "Happy Birthday" to your child doesn't count. Having movie characters sing "Happy Birthday", for example, most certainly does count, which is why you find that song rarely used in movies (except, of course, when the producers felt like springing for the license fee).

Folks complaining about what copyright law cannot possibly prohibit should probably consider reading some books on copyright law.

Note, of course, that someone who reverse-engineers new firmware, as long as the do it through the process that the courts have agreed to, is not violating Motorola's copyright, and indeed would not be violating their copyright even if substantial portions of the firmware were the same -- if (and only if) the design of the hardware sufficiently constrained software implementations such that Motorola's implementation were the only, or the most obvious, one possible (expect to need _thorough_ documentation of the design and development process).

So, someone who burns a new ROM for a Motorola radio has copied their copyright-protected software, and (if done without a license) has violated their copyright.

If these "modifications" consist of poking values into EEPROM control registers, however, then they haven't copied a thing (except, possibly, for the program used to perform the register update).

I'm in the process of doing just that (shielding, ferrites, etc.).
However, there would have been fewer problems if the PC was shielded
as well as the Gateway's I've seen.

Computer dealers are human, too. If they 'fessed up to cutting corners
to keep costs down, and offered to help fix it, everything would have been
OK.

On the other hand, just think of the increasing amount of RF junk generated
by millions of PC's, electronic-ballast flourescent lights, etc. It's all
pollution of a shared resource, just like coal-fired powerplants belching
sulfur dioxide into the air.

Jim

3437. Re: Converting an HT

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-11 16:15:59 UTC
From: brian@nothing.ucsd.edu
Message-ID: <29c0rvINN9rl@network.ucsd.edu>
Source record: 275160

When I convert commercial equipment to ham use - which must be well over a hundred radios by now - I usually order 'Commercial Standard' grade crystals. These have a calibration tolerance of around .005%, and a similar temperature tolerance over the range 0 to 50 C. This is perfectly adequate to ensure that the radio's trimmer will be able to tweak the crystal onto channel and that it will stay there in the temperature extremes that one normally encounters here in San Diego. Such a crystal costs between $12 and $15.

For the crystals used in our repeaters, I prefer to send the channel element to the crystal manufacturer and have him install the new crystal into the element and recompensate it to match the characteristics of that particular crystal. I usually order a tighter temperature tolerance crystal too - .0025% or .001%. The calibration tolerance doesn't have to be tighter, but the temperature tolerance should be. This is because the temperature inside our mountaintop vaults may reach below freezing during winter storms, or rise well above 130 F on hot summer days.

In standard narrowband (+/- 5kHz dev, 15 kHz channel spacing) ham operation, it's essential to keep the transmitter and receiver within about 500 Hz of the operating frequency to avoid distortion, ignition interference, and loss of effective sensitivity. I prefer my equipment to stay within 100 Hz if possible.

Even the cheap ham-grade FM transceivers will suffer if they are off frequency by more than 800 Hz or so; that means that I have had to reset the master oscillators in my Kenwood base station radio (a 741) about once a year since I bought it. Eventually the crystals in this radio should stop aging; most of my other radios have settled down sooner than this one, so maybe I'll have to buy new crystals for it from a more reliable manufacturer than the one Kenwood bought from.

I assert that freq-and-dev clinics still need to be held periodically even in these days of synthesized radios - because the synthesizer reference and heterodyne crystals still drift. There's just fewer to adjust, that's all.
- Brian

>ELNEC. I think 99% of hams would be surprised at the results. Simply
>changing from coax to ladder-line on my G5RV doubled my radiated power
>while making my transmitter-end SWR a lot higher.

Ok, 100 feet of RG58A at 17 meters has a loss of 2.2 db. So if we measure 100 watts at the transmitter end, we know that the antenna is getting 60.25 watts. Now a 1.6:1 SWR at the transmitter means that for 100 watts out we are getting a reflected power of 5.325 watts back at the transmitter. That power came from the antenna mismatch reflection, so if we apply the cable loss again we get 9.03 watts at the antenna. So now we have 60.25 watts forward at the antenna, and 9.03 watts reflected at the antenna for a SWR of 2.263:1. There's an additional loss due to the SWR on the line of 0.097 db, but that's only 2% and thus below measuremental error.

Now we represent that on the Smith chart by a spiral that starts at the 1.6:1 constant SWR circle and spirals out to the 2.263:1 circle as we move 100 feet from the generator. We can now read all the handy information about impedances from the chart. No big mystery.

Gary

>being sold?

Ahem. If your only exposure to the "gay lifestyle" happens to be in the men's restrooms at your school, then I'd suggest you need to withold blanket judgement until you have a little more perspective.

To begin with, equating homosexual conduct with child molestation shows a limited mindset. Child molestation victimizes a child; consensual sex between adults victimizes no one.

There are certainly examples of militant and public homosexual behavior that are offensive. At the same time, there are many examples of militant and public heterosexual behavior that are offensive. In each case, different people may be offended for different reasons, but it remains that extremes among all demographic groups exist.

Would it make any difference to you, Jeff, if the stains on the walls of the toilet stalls were there because of heterosexual conduct? Would you be less critical? Heterosexual couples often engage in oral and anal sex, contrary to the laws of many states. I'd even wager a significant number of ARRL members, even the coded ones, enjoy sexual practices which violate anti-sodomy laws. Does this mean the ARRL should be outlawed, or that the ARRL needs to extract some kind of pledge from members that they will not engage in any kind of "deviant" sexual behavior?

Keep in mind, I am an openly heterosexual man who simply believes people should be left alone when it comes to consensual sexual relations.

>lately. I do have a rig that transmits AM (FT-102) and have tried it.

Most AMers are using restored antiques or homebrew transmitters. Almost
all of them are using plate (or collector) modulation rather than
unbalancing the balanced modulator and linearly amplifying the result
as in the FT-102. Compared to SSB, or the bandlimited AM from a SSB
rig, the audio fidelity is superb, often reaching broadcast standard.
It's hard to appreciate just how good the audio is on today's tightly
filtered receivers, but with one of the fine old receivers, the quality
shines through. Nostalga, and the fine audio quality, are what draws
most of the current crop of AMers.

3441. VE3ONT report #1

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-11 16:47:23 UTC
From: MOWE%SLUMUS.BITNET@CUNYVM.CUNY.EDU
Message-ID: <11OCT93.12733226.0076.MUSIC@SLUMUS>
Source record: 275157

VE3ONT - 1st Weekend Summary

Moonbounce tests from VE3ONT (46 meter dish) were highly successful this past weekend (Oct 9 & 10). Results:

Band QSOs Multipliers
144 236 44
432 166 37
Total 402 81

QRM was staggering and signals were quite strong (especially on 432). We had some trouble on receive on 432 due to bad DC regulation on the preamp power supply; this made copying weak signals difficult. Most stations heeded our widely-published intention (QST, CQ, InterNet, packet, etc.) to work "split." This was necessary to spread out the QRM. We were not listening on our transmit frequency; we're sorry if we missed anyone.

HF liaison was not successful. Despite appearances, we were on 3.818, 3.843, and 14.345 regularly, but it seemed like were in a black hole - nobody could hear us and we heard almost no one.

The big dish has a minimum elevation of about 9 degrees, thus our Moon window is somewhat narrower than we expected.

NOTE: QSL information: QSL via VE3ONT ('93 Callbook address only!) or to VE3ASO, Dennis Mungham, R.R. 3, Mountain, Ontario K0E 1S0. QSLs to old VE3ONT address will be returned by the post office. Please pass the word.

As previously announced, we plan to be on 432.050 MHz (with a better receiver and at least 1 dB more antenna gain) on Saturday, Nov. 6, and on 1296.050 on Sunday, Nov. 7. One change from earlier announcements: VE3ONT will run linear polarization on 1296 instead of circular.

More information, including a detailed breakdown of the score, will be posted later.

Actually, from my own point of view, politically, I could live
with a version of that, and would even be open to a scheme that
left the entire question up to the free market (i.e., if you
buy cheap crap, it will get interfered with) provided the
Government's hands-off approach would apply equally to
radiators as well as receivers. In other words, if a TV
manufacturer wants to sell a poorly shielded set for less
money -- fine! But then no one has any right to complain
when the ham operator down the street messes up the Simpsons.
The problem is, it rarely works that way. Usually, the
people watching TV for entertainment have more political
clout than those using the spectrum for arguably more
productive purposes. For example, some 10 or 12 years
ago the FCC came down hard on the pager (pocket beeper)
industry operating at 43 MHz, claiming that they were
interfering with the IF in TV receivers. Paging licensees
were forced to jump through all sorts of hoops, including
sending out a survey that essentially begged for interference
complaints. The outrage was that documents produced in
response to an FOIA request clearly showed two things:

1) The FCC's own field investigations showed
that the interference was the result of poorly
shielded TV sets, and not the paging transmitters
(properly shielded TVs had not problems), and

2) The only reason the FCC came down on the
paging licensees rather than the TV manufacturers
was to quiet Congressional inquries in an
election year.

So I would say before we go to a more laissez-faire approach,
we have to find some way to insure that it is applied equally
and fairly across the board.

Now that one has the option (in the US) of keeping the same call as they upgrade,
is this situation occuring more often? I'm a Tech- :) and I'm planning on
upgrading quite a bit in the coming months. I also plan on keeping my 1x3 call.
Should I expect a lot of grief from ops on the Extra segment (after I get that
upgrade) even though I have a legal license for that band?

Cheers,
David

Let's see, you must be at a school. Ah, University of Iowa. That
explains it.

How many commercial products have you developed with a "DPS" (Department
of Public Service chip?) and a book from a local bookstore. If you or
your friends with actual, real, degrees from recognized schools (and you
actually know more about engineering than this post let's on) are only
paid $4.65/hour, let me know. I've got a bunch of work for you.

Thank you for welcoming me to the real world. Fortunately (or
unfortunately depending on how you look at) I've been in the real world
(tm) for awhile now. Let me know when they let you have a real peek.

All Lamda wanted to do was to take out an ad. Do you object to QST running
ads by the Jewish amateur radio group?

It seems to me that the ARRL is going out of its way to pillory
the Lambda organization: the ARRL is promoting *their* social ideal
at the expense of a social minority and the radio hobby. Does the
ARRL disallow ads with the letter "VFW" in it? How about
"senior citizens", "NRA", "women", or "handicapped"? No?
Why not? Why do they discriminate against gays?

I think the ARRL should get out of the social commentary business
and run the Lambda ads, just like they run any ads for prospective
special interest radio nets. The sole criterion should be, as long
as its legal and non-libelling, "Does it advance the radio hobby?"

Until then, Lambda ought to wield as big a stick as they need to
get attention of the mule as dense as the ARRL OF's.

I have found the SB220 to work nicely on 18 MHz with the
bandswitch in the 15 meter position. It reportedly also works
on 24 MHz in the 10 or 15 meter position. I also checked it
on 30 meters into a dummy load...yes, I know the power output is
limited to 200 watts but I don't have a 30m antenna anyhow.
It does nicely on 30 meters using the 20 meter position. A friend
does similar tricks with his SB200. Please remember that there will
be some effect due to the bandwidth of the antenna you are using.
That is, on 18 MHz you may get a better resonance (plate dip)
with band switch in 20 meter position. As always, your mileage
will vary. 73, Tom WB4IUX

Hello,

I have a Kenwood 830s with an old Shure mic and I would like to get an Astatic chrome mic. I know where I can get one but, I am wondering a couple of things before I buy it:

1) Will it work with the Kenwood 830s? (it is the correct impedence?)
2) Where can I find a replace mic element for the Astatic that has great audio quality?

Any help is appreciated.

Many of these operations get around the FCC by selling compliant components only. They will offer to assemble your pieces for a fee. They have not sold a complete system and so stay out of legal trouble.

>----------- 11'
>-------- 8'
>
>Is this a reasonable idea? Has anyone out there tried this?

The length of these wires are not only dependent on the bands you want to work. You pick the lowest band you want to work and then decide how many radials you can put into the ground. You are doing this in or on top of the ground aren't you?

If you can only do say 50 radials then they only need to be .2 wavelength of the lowest frequency. If you are only putting down 20 radials then less than a tenth of a wavelength long need be the length.

The key here is how far apart will the radials be at their ends. If not to many are put in the ground then the distance between the radials get so far apart that the return path for the electric field has to go through too much earth to make adding more length to these radials of any value.

There is a table in the ARRL Antenna Book that indicates the best length for radials vs the number of radials you plan to put down.

When radials are buried in the ground they don't have to be some special 1/4 wavelength for each band. The radials are just improving the "ground" around the vertical not providing the ground by itself.

If you are putting a ground plane above ground, like on a roof, then the length is critical because now you are making a bent dipole where the radial is acting as one half the anntenna with the vertical radiator.

3467. The Canonical list of Code-Wars Answers

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-11 22:28:06 UTC
From: brian@amdcl2.amd.com
Message-ID: <CEr7qu.6u4@amdcl2>
Source record: 274880

To Code or Not To Code, *THAT* is the question! I've collected and distilled the *ENTIRE* net.wisdom on this issue and so I present the following canonical list for your elucidation. In order to conserve net.bandwidth, please search for your favorite answer and then respond by number rather than with the entire text. :-)

1) No-Code is good!
2) No-Code is bad!
3) Morse Code is a separate and distinct *LANGUAGE*!
4) No it isn't!
5) Yes it is! I just talked to a guy in Upper Eeleeouglieaph yesterday. His name was Dzlaeufliinaout and that's all I know!
6) Everybody should know Morse Code to help intercept *SPY* messages!
7) Hey! Morse is my favorite mode! Don't knock it 'till you try it!
8) Morris Code stinks!
9) No it doesn't!
10) It's the most spectrally *efficient* mode!
11) No it isn't!
12) Code will punch through when all else fails because it has the *BEST* immunity to noise!
13) No way! Digital modes and DSP will pull a signal out of the noise when you can't *EVEN* hear it!
14) I've got better things to do with my brain cells than ask them to act like a wetware modem!
15) I had to learn Morse Code so *YOU* should too!
16) All past and current problems with ham radio are a direct result of the No-Code Technicians!
17) Morse Code keeps the riff-raff out of ham radio!
18) Toss the Code requirement and make the written test harder!
19) Can I order pizza in Morse Code?
20) I heard one of those bozo's sending Morse Code on the repeater!
21) If Morris Code is so good, why does it need protected band space?
22) The FCC says No-Code is good. So There!
23) I wouldn't be a ham if there wasn't a No-Code license.
24) GET A LIFE!
25) Where's my KILL file?
26) That's the sound of an electric hole saw warming up!
27) The ARRL did this to us! Blame *THEM*!
28) The ARRL tried their best to stop this! Blame *THEM*!
29) I'm going to cancel my ARRL membership over this *ONE* issue!
30) Hams who started with No-Code now represent 98% of all hams!
31) Hey! Can't you U.S. guys keep this discussion to yourselves?
32) You're a *#&@!^%!
33) Yeah? And your mother wears tennis shoes!

34) Oh bother, let's just give the spectrum back to the spectrum gods.
35) Vacuum Tubes! Yeah, now that's a great idea!
36) I can build a CW transceiver with only *THREE* components!
37) Including the *ANTENNA*!
38) Without Morse Code, the ham bands will be filled with *CB'ers*!
39) UGH!
40) Hey! Who're you calling a *CB'er*!
41) (in chorus) UGH!
42) Free the airwaves! Eliminate the written test!
43) Sigh. Another step in the &#$*%)# incentive licensing scandal.
44) The QCWA supported No-Code, so it must be good!
45) It's a conspiracy of the {ARRL, QCWA, AMSAT, TAPR, $$$$, etc.}
46) This discussion is *BORING*!
47) *EVERYBODY* supports No-Code!
48) *EVERYBODY* hates No-Code!
49) Morse Code is a *VALUABLE* skill!
50) There's an *INTERNATIONAL AGREEMENT* that forbids this!
51) But Japan doesn't abide by it!
52) Morse Code -- it's *DIVINE*!
53) *FLAMETHROWERS ON HIGH*!
54) Go ahead, I've got my asbestos underwear on!
55) Ya feel lucky, Punk? Huh? Go ahead, make my day.
56) Take this discussion to r.r.a.policy!
57) But what if you're in an airplane crash and the mike breaks?
THEN you'll wish you knew the code!
58) There is an inverse relationship between code speed and IQ!
59) But the written tests require Algebra, and you'll never use THAT
when you're operating!
60) But I'm a ham *BECAUSE* I was attracted by Morse code!
61) CB'ers don't do morse code, the CB band is a mess, therefore morse
code is what keeps the ham bands clean!
62) Morse code works even when you can't understand someone's accent!

The owners manual for 1993 Toyota Camrys warns against running more
than 10(?) watts on any radio installed in the car. Apparently,
Toyota has fixed this for 1994, according to the form letter that
they sent to me. They have specific suggestions for installation
that, of course, I can't recall off hand. However, they claim that
it is acceptable to install a 100-watt transmitter in the 1994 Camry.

You've really cut him down to size!

>Real ham radios don't have microphones.

Excuse me! Suppose you were in a really bad crash and your CW key was broken; if you have a microphone, at least you have a backup.

I don't actually use ham radios for VHF/UHF. Instead, I prefer the quality and reliability of a Motorola. It saves me from having to do frequent checks on the local repeaters to be sure my radio is still working. I can just pick up the microphone with the distinctive blue "M" and communicate.

I'm taking an informal survey and will post results to the net: what "standards" exist on our FM/repeater bands for breaking into a conversation in progress? I'm not talking about a directed net where there is a set protocol for getting recognized by the net control. Suppose you were repeater surfing (hey!, I coined a new word!) and stumbled into a discussion on whizbangs -- a topic near and dear to your heart -- and you wanted to join in. How do you do it? Is what you do the same as the "conventional" technique in your area? If not, what is the "standard" in your area?

Obvious options include:
1) Wait for a pause and say your whole callsign
2) Wait and say a few characters of your callsign
3) Wait and say "break"
4) Wait and say "mayday" :-)
5) Crank the power and attempt to overpower one of the stations or at least create some nasty "doubling" noise so they hear you. :-(
6) Don't EVER break into a conversation on whizbangs.

Suppose you don't actually want to join the discussion at hand but would like to use the repeater to contact a friend of yours who is probably monitoring that repeater?

Suppose you have a bona-fide emergency situation?

Again, please don't followup -- I'll summarize and post if I get at least 10 responses.

73,
Brian McMinn N5PSS brian.mcminn@amd.com

>
> NOT LEGAL IN U.S.A - FOR EXPORT ONLY

In what way is this mod "not legal"? The expanded receive doesn't cover the cellular band, so the ECPA doesn't come into it, and I don't know of any other restrictions on ownership or modification (as opposed to use of possibly modified equipment) of radio receivers and/or transmitters (well, besides the 11 meter amplifier ban, which also doesn't apply). So what law is this mod against, or is this disclaimer just a "CYA" measure?

3474. 2 meter handheld questions.

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-11 23:33:53 UTC
From: babiyd@malins.mala.bc.ca
Message-ID: <1993Oct11.163353.2459@malins.mala.bc.ca>
Source record: 275099

Hello, I'm a newly minted ham, I live up in Canada, and I'm frankly overwhelmed with all the choices and options in the 2 meter handheld market.

Could someone go over the important features, what to look for, what features are just "never used buttons" and maybe some suggestions as to what models and rigs work well for them?

Related question: I'm likely going to be toating this poor handheld between home, the car and school, now as a base site unit, how important would an amp become, remebering that the HT is only gonna put out a max of 5 watts. What would the range become if I put 30 watts out through a 1/2 wave vert monopole? Assume better then avg terrain, I live on an island, and my major target is a city across the salt-pond... what sort of range can I expect with an amp and without w/o using repeaters?

Thankyou very much,
Dale Babiy

Oops, look out...you'll probably be served with the court papers
tomorrow. :-) Imagine, using a MOTOROLA! And it's probably MODIFIED,
too! Isn't that a crime? Or at least, their ad says so...;-)

>simultanious users without paying DEC for the privilage? Once I make the
>modifications, I am sure DEC wouldn't mind if I post if to the Internet.

So make your potential new customer sign a license agreement! (Though I
think the mainframe approach is a hoot! The VMS /UNIX approach is more
reasonable. But the customer's are warned up front with legal language.)

Your analogy is flawed. May I suggest: Your new computer has a firmware
bit that enables higher speed or more memory. You sell them for
different prices, depending on the speed. Is it illegal for a customer
to flip that bit?

In every case I know of, it is not illegal. You can refuse support,
refuse further sales, etc. But not take criminal action.

Because of this, some computer companies have serious encryption schemes
in firmware. You modify the firmware (or some other form of stable
storage) and the OS can tell. Very difficult to hack that one.

>Motorola doesn't have a problem with business radio equipment being used in
>the ham bands or with hardware field modifications to the equipment. The
>problem is people hacking software to turn on features which Motorola paid
>to write, but that the customer hasn't paid to use. I have seen cases

Encrypt it! Make it difficult! But sue someone, and you will loose
market share. Ask Lotus.

>where the software interactions from having several features turned on that
>were never designed to be used together caused equipment or system
>problems. Not to mention that changing codeplug bits in a radio is a good
>way to wind up with a radio that will only power up and display the error
>"FAIL 01/82" (corrupt radio EEPROM).

Caveat Emptor. Tell them the radio is broken due to non Motorola mods.
Charge lots of money to fix it. Smile and say: "We are sorry the people
who modified your radio did not know how to do it correctly. That will
be $XXXXX." (Where $XXX is 2X the cost of the Moto mods.)

I think the Moto ads probably will cost more in negative publicity than
they will recover "lost" revenues.

I have seen several companies handle this type of issue in several different ways. My observation is that threats (even if not directed at the customers) will have a negative impact. Look how well the cable theft of services warnings have worked. (They have not.) And the public/congress pushed through the regulation act.

Put a technical solution in place rather than allow lawyers to hurt your company's image.

No flame, just puzzled how big "M" messed this one up.

Gee, my old Drake TR-72 is a 23 channel xtal controlled radio. I am not sure
of the manufacture date, but I wonder if our dear friends at Drake were
trying to sabotage the Ham bands?

BTW - this makes a great packet radio!

ANARTS meeting
==============
The next meeting of ANARTS will be on Friday 15th October at
7.30 pm. We hope to see the Sydney members coming to the
mmeting. We have tea and coffee afterwards while we all
indulge in ragchew. Please contact Jim VK2BQS on 631 3560, or
Col VK2CTD on 524 3989, or Pat VK2JPA (wk) 230 3722 if you are
going to attend.

Come along and meet the other ANARTS members, or even join the
Society and watch us grow.

----------------------------------------

Results of the ANARTS WW RTTY Contest part TWO

Please note - the results are being published here in advance
of the contestants official notification. These should reach
contestants shortly together with certificates earned in the
contest (as soon as Jim has his handwriting working well, hi
hi).

JARTS WW RTTY Contest rules

Dates: October 16-17 (Hmm, thats JOTA weekend)

Note: new rules about band mults, QSO points, and multi-op exchange.

Contest period: Starts at 0000 UTC Saturday, October 16th, and ends at 2400 UTC Sunday, October 17th, a total of 48 hours. You can operate all 48 hours (No off periods required).

Bands: 80, 40, 20, 15, and 10m (five bands).
Japanese RTTY segments are:

80m 3.520 - 3.525 MHz note!
40m 7.025 - 7.040 MHz note!

20m 14.070 - 14,112 MHz
15m 21.070 - 21.125 MHz
10m 28.070 - 28.150 MHz

Mode: Baudot (RTTY) only

Operator classes:

A) Single operator, all band
B) Multi-operator, single transmitter
C) SWL

Message exchange: RST plus operator's age. (00 acceptable for YL and XYL. All multi-op stations must send 99 as operator age.

More next week

Summary of activity

Solar activity was very low 1st, and 5th-6th October, low on 3rd-4th and 7th, and moderate on 2nd. There was an M1 flare on 2nd.

The geomagnetic field at Learmonth (WA) was generally quiet, except for 1st and 5th when the field was quiet to unsettled.

Ionospheric F2 critical frequencies at Sydney for 1st-3rd October were slightly depressed to 15 per cent, rising to 30 per cent depressed on 4th with one very short period at 1300UT when the field was depressed by 40 per cent. Spread F was observed on this date. On 5th-7th, frequencies were near normal with depressed periods of up to 25 per cent below monthly predicted values.

The geomagnetic field at Learmonth (WA) was generally quiet, except for 1st and 5th when the field was quiet to unsettled.

Ionospheric F2 critical frequencies at Sydney for 1st-3rd October were slightly depressed to 15 per cent, rising to 30 per cent depressed on 4th with one very short period at 1300UT when the field was depressed by 40 per cent. Spread F was

observed on this date. On 5th-7th, frequencies were near
normal with depressed periods of up to 25 per cent below
monthly predicted values.

Forecast for the next week (8 - 14 October)

Solar : Low.

Geomagnetic: Storm levels from late on the 9th to the 11th,
becoming quiet by the 13th.

Ionospheric: 30-50 per cent below predicted monthly levels on
October 10-12. 15 per cent below predicted
monthly levels otherwise.

Sorry, Rick, but this was not the case (no pun intended) here. The
company in question assembles complete systems out of motherboards,
cabinets, I/O cards, etc. that other companies produce.

It was their choice to sell unshielded cabinets.

It was their choice to place FCC-part-15 sticker on a device
that certainly violates those regulations.

It was their choice to install unlicensed copies of DOS/Windows on it.
(Nothing to do with RFI, but a good example of their general attitude.)

People who hoist the Jolly Roger in the name of Corporate Profit
deserve an occaisional "whomp" upside the head.

But it is not illegal. I think that Motorola has too many managers who
don't have any idea how their equipment works and blaming the "illegal"
modifications for their poor results. I think that the person who wrote
the add is technically clueless.

Unless Motorola makes the buyer sign a license they don't have any control
over a radio after they sell it. If all it takes to expand coverage is
to set some bits in a prom no crimes are comitted.

Are you a lawyer or do you only play one on the net ?

P.S. The best way avoid lawsuits is to avoid buying or specifing
Motorola products.

The relationship of Motorla and Hams hs not always been friendly, at least in my experiene. In most cases, old gear which could be used by hams for fun was destroyed rather than donated or sold cheap - perhaps out of fear that it would be resold back into the commercial service.

In addition there have been some anti-ham activities at some local shops and dealers, such as blaming amateur installations for any and all sorts of site problems.

On the other hand, I've known some wonderful folks who work for the big M, and they make the other stress bearabl.

>the work.

Let's see, you must be at a school. Ah, University of Iowa. That
explains it.

>How many commercial products have you developed with a "DPS" (Department
>of Public Service chip?) and a book from a local bookstore.
Correction: DPS = Department of Public Safety.
> If you or
>your friends with actual, real, degrees from recognized schools (and you
>actually know more about engineering than this post let's on) are only
>paid $4.65/hour, let me know. I've got a bunch of work for you.

Your answer reminds me of an article I read in Byte magazine years back about the first
days
of microprocessors.
When the 6500 (??) CPU was announced, it was announced that its price
would be $5 per CPU. At that time Motorola and other CPU makers were selling their
CPUs for about $125 a piece. The Motorola dealer asked by the journalist who wrote the
article said that it would be impossible to sell a CPU for $5. The day of the presentation

of the new CPU to the public came and as announced the price of the CPU was $5 and you had to pay another $5 for the manual. It took a few days for Motorola to find a way to lower
its manufacturing costs and sell their CPUs for equivalent prices.

A few years back a friend of mine bought a math coprosessor for his computer. He paid about $600 for an Intel 387. The list price of a 387 was $900. A month later the list price went to $300.
And today the price is $99 ???. I wonder how can Intel pay all these hundreds of engineers who worked for years to develop that chip.

I would admit that I have not developed and commercial products with Department of Public Safety chips. But I have developed enough software using DPS boards to know that the price you pay for many of these commercial products is unreal.
You pay a huge price not because the hardware is unique, but because the software that comes
with it is what you need.

>Thank you for welcoming me to the real world. Fortunately (or
>unfortunately depending on how you look at) I've been in the real world
>(tm) for awhile now. Let me know when they let you have a real peek.
>"No man, woman, or child is safe when congress is in session." Will Rogers

I do not know how the people in the real world call "100 engineers working for a year" to develop the software for Motorola radios, but I call it job security.

garys@Ingres.COM (Gary Swiger) says:

>I think it's a sad day for Amateur Radio when any special interest group tries
>to use Amateur Radio as a platform to promote their ideals - this is not the
>purpose of Amateur Radio...

Does anyone know what the ad said? If QST runs an ad for the QCWA,
does that mean that we are all being forced to grow old suddenly?
And looky here, on page 95 of the latest QST, someone wants to get
in touch with anyone who served with the 1716th Signal Service
Aviation Battalion in Manila in 1945-46. What is this guy doing -
trying to promote the ideals of the military? And anyway, what
does he mean, "get in touch with"?? Nudge, nudge, say no more!!
(actually, it says "would like to in touch with", that may even
worse, I dunno).

That said, I have to add that the thought of a Lambda group trying
to hold a net on 75 meters sends shudders down my spine - them good
old boys that own the band would have themselves a ball, hoo-eey.

Yes, amateur radio is bringing the country to a new low, what with
all them heteroseckshles in the schools - and I saw a lady's ankle
the other day. Pass the smelling salts! (so to say).

burke_br@adcae1.comm.mot.com (Bruce Burke Sp App) writes:

>Because you have given the customer something he hasn't paid for and
>you are making a living from it.

I buy a copy of a book. I then resell the book for more than I paid
for it. Crime? Nope.

I buy a Motorola radio. I make firmware modifications to it. Crime?
Nope.

>Yes copyright laws do apply when it comes to altering computer code and
>then trying to make a living from it.

The only thing that copyright law protects with regard to computer
code is my ability to sell copies of it. If I own a legally-purchased
copy of computer code, I am more than within my rights, as determined
by the courts, to make modifications myself (or hire someone to make
modifications for me) to my copy of that computer code. I am also
entirely within my rights to publish *MY* modifications, which are
MY property (as defined by that oh-so-sacred Copyright which you
constantly refer to...) as I see fit. The fact that these modifications
happen to "turn on" certain functions or abilities within Motorola
radios... Well, its just not my problem...

If I purchase a copy of Star Trek, and decide to modify the program
to make the Klingons fight harder, I am within my right to do so.
I can then publish my modifications so all owners of Star Trek can
also make the mod, if they want to.

What copyright law prevents me from doing is taking my copy of Star
Trek, making a modification, and then reselling multiple copies of
my modified version.

>And while we are at it -
>every time you sing Happy Birthday, technically you owe someone a royalty
>because that somg is copyrighted!

Technically... NOT!

A copyright which isn't enforced is lost, hath saideth the courts.

>As for books, go ahead and pull a chapter out of
>one and try to republish it with your name on it and watch what happens!

See above.

>Messing with the computer code for profit is another.

Gee, I wonder my Microsoft hasn't persecuted all those people who
came up with MS-DOS patches to "enhance" the operating system...

>You are the one who needs to study, you obviously don't understand what the
>issue is.

Oh, but Bruce, I *DO* understand what the issue is. And I understand that
it is complete, utter, bullshit.

I've been acutely aware of what is and what isn't legal, after spending
several months working on copyright and patent filing preparations
with several intellectual-property attornies in Arlington, VA, for a
device I assisted in the engineering and firmware development of.
Can you say the same, Bruce?

>There are all kinds of protected items within a radio.
>Proprietary IC's are one.

Which are, if I'm not mistaken, generally protected via patent, are they
not? Very different from a copyright.

>So is the competer code which makes the radio what it is. When you buy a radio
>that is driven by a micrprocessor and computer code, you are not buying the
>code and that is where many people think they know better. You are merely being
>licenced to use it.

Please provide the readers evidence of this license agreement. Furthermore,
please show where within the license agreement that it stipulates that
only Motorola may make modifications to said radios.

Are said license agreements signed by the parties prior to purchase, or
are they simply "mentioned" in an owners' manual or some other such
documentation?

Computer firmware is protected by copyright (although specific
algorithms implemented by said code may be protected by patent).
Copyright law does not prevent owner modification.

>The company still retains ownership of it. Just like
>going out and buying sheet music or a book.

Sure, and the company can make other copies of it. But, just as I can
write in the book I purchase down the street, I can also make modifications
to your firmware. I simply can't take a copy of yours and start selling
it. And, Bit 3 of Location 0x123 isn't a copyrightable item.

>As for what side I stand on, that is my business. If you
>don't like it, fine, but you can't tell me where to stand on an issue.

I don't blame you for spouting the party propaganda, Bruce. It would
simply be better if you actually knew something about what you were
attempting to spout. Simply repeating what you've been spoon-fed
doesn't automatically make it become truth. Instead, try taking an
actual class on copyright law, or perhaps post a few messages in
misc.int-property to learn something.

3494. IRCI filters, anyone?

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-12 04:57:58 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9310112157.aa02240@Paris.ics.uci.edu>
Source record: 275120

Anyone out there have any experience with the IRCI SSB filters?
I am interested in the 2.1 Khz filters for SSB, and wonder how
good they are, AND how much they cut the audio from a normal
2.4 Khz filter. I was thinking about a pair of these filters
for my TS 440, one at 455 and one at 8.8, I figure it would be
pretty sharp, but how would it sound? I am not very happy with
1.8 filters, I tune my ear to them, and sometimes they really help,
but the voices sound a bit thin. How is 2.1?

Just wondering....

There are also places in the country where "Break" is codeword for
"Emergency, get off the frequency NOW". Trying to get into a conversation
using "Break" instead of one's callsign may get one ignored as a lid.

I will assume by your statement that Hams are a group of people who largely responsible for the "illegal" modifications to Motorola equipment. This statement is also based upon my observation they did not post a similar advertisement in Communications magazine (a trade journal for dealers and repair shops in the landmobile community).

3506. Re: Motorola

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-12 12:13:42 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <CEs9yw.376@hpqmoea.sqf.hp.com>
Source record: 274998

Try this analogy:

Your friendly dominant car manufacturer sells cars with 4 and 5 speed transmissions, but has found it easier and cheaper to build only the 5 speeder. It sells a 4 speeder that is really a 5 speeder with the 5th speed locked out by fitting a longer stop plug into the selector mechanism. Someone discovers this, and goes into business - he removes the plug and saws it shorter, he charges $100 for this service. He then buys a number of the cars, modifies them and sells them. Individuals also hear, on the grapevine, and modify their own base model cars. The information could have come by word of mouth from the car plant, or maybe someone smart noticed it in a diagram in the service manual.

What can the factory do?

How would a court decide (courts are much better on physical objects than they are on intangibles like software, also case law is more developed)

I think the court would laugh, and not find for the car maker. The only thing that would get action would be if the modifier was trying to pass his version off as the manufacturer's.

The factory could consider the warranty void on modified vehicles.

Next step:

It turns out that the modifier was using tools (spanner, hacksaw) stolen from the car plant. This is simple theft.

or,

It turns out that the modifier has unauthorised copies of engineering drawings from the car plant, from which he got the dimensions of the sawn off plug. This is theft or breach of copyright.

Back to the real case.... I can understand how someone can get upset and take action if people go into business USING software stolen from them. Sounds fair to me.

If the radio modifiers are using their own software, then that is an entirely different matter.

Perhaps the advert was a bit of sabre rattling to allow their lawyers to show that ther have been trying to assert their rights to their own software. If so, it was not written very clearly.

Just my personal opinion

David GM4ZNX

> YAESU FT-530
>
> Expanded Receive 110-180, 300-500 MHz
> Expanded Transmit 130-180, 400-470 MHz
>
> NOT LEGAL IN U.S.A - FOR EXPORT ONLY

In what way is this mod "not legal"? The expanded receive doesn't
cover the cellular band, so the ECPA doesn't come into it, and I don't
know of any other restrictions on ownership or modification (as
opposed to use of possibly modified equipment) of radio receivers
and/or transmitters (well, besides the 11 meter amplifier ban, which
also doesn't apply). So what law is this mod against, or is this
disclaimer just a "CYA" measure?
-Steve, WB3I
* *
The mod is illegal because FCC R&R require that transmitters operating
in the 148-174 MHz range MUST be Type Accepted. Operation of any non-TAd
device is a violation subject to fines of up to $10,000 PER OCCURANCE
and forfeiture of the device. Suggest you read 47 CFR Ch. I, 90.203,
2.803, etc. It's been this way since 1955, but some folks still insist
that hams can do anything to be prepared for emergencies, including
such violations. You must start with a legally compliant station and
operator before trying to invoke the so-called "emergency" clauses!
BTW, that's why the FCC has licensing for commercial operators and
tests them on those portions of the rules!

Except, of course, that 3rd party, aftermarket firmware modifications are perfectly legal, despite what Motorola attempts to pass off.

If Motorola doesn't want customers to gain access to certain features, then they shouldn't build them into radios, period.

>
>They aren't trying to intimidate their customers, they are trying to intimidate those
>who would make a living from illegally modifying the radios software.

Then they're doing a particularly bad job of communicating that fact.
As has now been discussed to death, modifying a legally purchased bit
of firmware is not a crime. It doesn't violate copyright, Motorola
doesn't have a patent on the code (which wouldn't matter anyway for
single item production or modification under fair use), and Motorola
doesn't force it's customers to sign a license agreement for the
firmware (shrink wrap licenses are void), so Motorola has no legal
recourse against anyone modifying their code unless those people
distribute the modified code, including the bits produced by
Motorola, to others. Motorola's ad does not make clear that they
are after such acts of piracy.

Note, distributing a *patch* kit that doesn't include any Motorola
code segments would be perfectly legal. Note too that Motorola
has no legal claim on the grounds that code bits are being activated
without the customer paying Motorola an extra fee either. This is
like receiving unsolicited packages in the mail. You have every
right to keep and use anything so distributed without paying for
the unsolicited goods. That's what Motorola's extra code features
are, unsolicited goods. They are no part of the customer's purchase
order, so they are included by Motorola at Motorola's own risk.

3511. Freebies from ARRL HQ

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-12 13:15:20 UTC
From: lhurder@arrl.org
Message-ID: <2434@arrl.org>
Source record: 274990

A reminder to all that the American Radio Relay League
continues to make available to Amateur Radio Operators and
non-amateurs alike a wide variety of free materials and
services. Of particular interest to the not-yet-licensed
individual would be the ARRL Prospective Ham Package. In
the PHP, one would find:
-
1. Printouts of Volunteer Examination session
opportunities in his/her area.
-
2. Listings of Amateur Radio clubs in his location.
-
3. Helpful promotional material about the Amateur Radio
Service.
-
The already-licensed individual might well be interested
in another free ARRL publication, the ARRL Public Service
Communications Manual. The PSCM represents the "bible" of
public service communications, and clearly/concisely
points out how the ARRL National Traffic System and the
ARRL Amateur Radio Emergency Service function as a
cohesive unit to provide the maximum support to the public
both in times of disaster as well as "normal" times.
-
To obtain any of these free ARRL services, please
provide me with:
-
A. Your name
B. Your mailing address
C. A Specific request for either of the two services
above.
-

| | | Deputy Manager, Field Services, ARRL.
| |___| The ARRL Amateur Radio Emergency Service, the ARRL

Interested in the Amateur Radio Service, but don't
know where to turn to locally for assistance?

Well, one of the very best ways to get a local helping
hand is to establish a relationship with your local
Amateur Radio club. And most areas of the country have
more clubs than you'd think possible.

Ah, but the eternal question is always "Say, just how
DO I contact an Amateur Radio club near me?"

Well, folks, do I have a deal for you!

For the price of a message to me here at ARRL HQ,
(SEEMS cheap enough!) and a specific request, I can get
you listings of more clubs than you'd ever want to visit.

To make it happen, please send me a message with your
name, your mailing address, and a specific request for the
Amateur Radio clubs in your area. I'll get them right out
to you.

And for those of you who are already licensed radio
amateurs, remember, your local clubs represent an ENORMOUS
resource for you.

Having trouble with TVI or local ordinances that
affect your capability to serve the public by way of your
Amateur Radio license? Interested in finding someone to
assist with a tower installation? Need to locate a
kindred spirit that understands YOUR concerns about
Amateur Radio satellite operation or digital networking
via Amateur Radio? Chances are that someone in your club
can help.

Another free service, brought to you by the world's
largest support organization for the Amateur Radio Service
-- the American Radio Relay League.

Yet another of the many free services that ARRL HQ offers is the ability to obtain Reciprocol Operating permit information.

Matter of fact, ARRL HQ is the ONLY place on the planet where this information resides!

"Awrite, already" sez you, "why would I ever want one, and how much are ya gonna burn me to GET one?" "Glad you asked!" sez I

Radio amateurs are a constantly-travelling, very mobile, bunch of folks, it appears, and their travels clearly take them to countries near and far. Myself, I prefer "far" rather than 'near', but if you're inclined to travel to Canada, you can ignore this whole tome, as the Canadian government and our own here in the States have worked out an automatic-reciprocity agreement.

But if Belize is on your itinerary perhaps, or any of the other many countries with whom we share a reciprocol operating agreement, you're in luck! Many foreign administrations DO allow U.S. Amateur Radio licensees to apply for a reciprocol operating permit, and you need but ask us for the complimentary package that we make available.

To make your trip more enjoyable in that regard, we need:

1. Your name
2. Your mailing address
3. A specific request for the RECIPOP package for the specific country you'll be off to.

And, yes, an e-mail request is fine!

> disclaimer just a "CYA" measure?
> -Steve, WB3I

It may not mention it in the mod, but according to owners that have done it this mod does open up the 800 Mhz band, including cellular. Most high end VHF/UHF rigs do get 800 Mhz these days - and some 2M rigs receive 400 Mhz range after mods. It will become illegal to import or manufacture a radio that is capable of scanning more than 4 channels and can receive or be easily modified to receive cellular on 4/26/94. It is not illegal now - it is only illegal if you actually listen...

3518. Sources for Newsline Program?

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-12 14:03:01 UTC
From: btbg1194@uxa.cso.uiuc.edu
Message-ID: <29edel$3qc@vixen.cso.uiuc.edu>
Source record: 274987

Our local weekly 2 meter net has played the Newsline program for the past several years. One of the local hams would record the program by a phone dialup line and then play it back. This has required a long distance call and Ma Bell has been the main benefactor of this activity.

We would like to redirect that money directly *to* Newsline by finding a *different* source for the program audio. I have heard Newsline replayed on HF on weekend afternoons and I have also heard that the program can be gotten from satellite feeds.

I would appreciate any and all leads to alternative sources for Newsline audio. (frequencies, times, ...)

Thanks!

> How does one use Coherent 4.2 with X-Window and ka9q to communicate with another X-Window system, such as a Sun Workstation? I understand that SLIP makes a serial port/modem look like a TCP/IP connection of some sort. My goal is to be able to run an X program on a remote workstation and display the GUI on my coherent system. I appreciate any comments on the subject.

That could work but not at high speed, if the remote workstation is on
the same site you could also use Ethernet LAN as ka9q can be
implemented over that too.

I have used the DOS version to be able to plug an
IBM compatible PC into our company (UNIX) network and ftp and telnet to
Sun and other workstations. The X Window system makes calls
over the TCP/IP suite and would typically be used over ethernet as the
physical medium. I was not aware that it available on Coherent, but
if it is you have all the bits. My one reservation would be the
interface between Coherent X Window and Coherent ka9q.

Could some of the more experienced hands here offer up some advice on DC power supplys for the shack? I'm starting out with a Kenwood TM-742A, which will act as my base 2m/70cm for a while. My dealer sold me a Daiwa PS-140II for $70, which he assured me would be just fine as a power supply for the Kenwood.

Examination of the Daiwa's specs, however, have given me cause for some concern. It lists the max output current of the PS as 14A, and service current as 12A with "1 minute on / 3 minutes off". It also lists a "VDE" spec of 8A.

The Kenwood draws a maximum of 11.5 amps...is the power supply I have adequate for the Kenwood for (A) normal FM voice operation (B) occasional packet service?

If I should invest in a larger PS, how do Astron's compare to Daiwa? Do most hams use a separate PS for each rig, or run multiple units off a single large supply?

I always thought it was "break, break" (theory books), but I assume local colloquialisms reign supreme.

WARNING: Minor peeve approaching.

What irritates me is that the one or two times I've said "break, break" (in the guise of calling 911) in my ham-life on a repeater, I have to then ask to use the patch, get an acknowledgment, etc, etc. If/When I say "break, break", shut up and let me call 911. If not, then what's stopping me from saying "salad, salad" (other than being ignored as a cabbage-head)?

Oh, well. Maybe I should move to one of the places referred to above...

First, wrt this particular matter, you're both wrong to the best of my knowledge.
Copyright laws pertaining to music only require a royalty be paid for _electronic reproduction_ of the music, in any form excepting the use of a microphone and an amplifier for, say, piano bar singing or karaoke, in a not-for-profit performance.
The copyright holders of HBTY do vigorously enforce their copyright against entities who reproduce their music on tapes, records, CDs, TV and radio, etc., which is where the copyright holds water.

I would suggest using nothing less than #16 wire for radials, otherwise the RF losses would be rather high. I would suggest using rotator cable, or something similar. I have seen a 3-legged version of the above done with #8 3-phase AC powerline cable; low RF resistance (in other words, lots of cross sectional area) is the important thing.

3528. Re: Imminent Death of Ham Radio: 2m HT in Penney's Christmas Catalog

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-12 15:29:46 UTC
From: edmitch@microsoft.com
Message-ID: <CEsJ1x.EFF@microsoft.com>
Source record: 274759

More than a decade ago, the old Sears Catalog carried
some amateur 2 mtr gear. Amateur Radio survived.

I understand the JC Whitney Catalog has carried a
2 mtr amateur transceiver during the past year. To
the best of my knowledege Amateur Radio has not
yet died.

Radio Shack has been carrying Amateur gear for what,
3 years now? Still now signs of death.

I work in the radio communications area and I can
assure you that there are far, far greater threats to
Amateur Radio access to spectrum than a few catalogs
carrying ham gear. Most hams forget, for example,
that our UHF freq allocations are "junk" bands that
are unsuitable for paying customers. 420-450 is shared
by a variety of radar services (and 420-430 is inaccessible
to those of us north of line "A"). Lucky you if you don't
live near a military airfield or soon to come civilian
doppler wind shear detection radar (448-450). 902-928
is shared with lots of other things, including Pacific
Telephone's TeleTrac high powered vehicle location system,
and in LA, I'm told, has told the hams to take it hike off
this band. 2.4 GHz is already shared with microwave ovens;
by late next year expect a flood of frequency hopping SS
data transceivers (I do mean a *flood* - lotsa of 'em
coming). Lots of "sharing" going on can negatively impact
our ham access to spectrum (although on the flip side, it
may guarantee us access since these are pretty noisy bands
unsuitable for others).

Lastly, everyone else is rapidly going digital (cellular
TDMA, CDMA, digital PCS, etc). Expect to see the "refarming"
of the old Landmobile frequencies to turn them into digital
voice networks, squeezing perhaps 6 signals per 25 kHz channel.
Once that is done, take a look back at the ham bands which are
still using 20 to 30 kHz narrowband FM. We will, unfortunately
look pretty funky! About then, someone is bound to suggest that
if the FCC shrunk our bands by say a factor of 4 (e.g. 144-145 MHz
instead of 144-148) and we all went digital, well, we'd have more
channels than we did before! Don't laugh! These are just the
kind of strange arguments that should be a little scary to you!

Don't waste too much emotional energy on worrying about whose
selling ham gear. There are bigger things to worry about!

3533. Yaesu FT530 AM receive

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-12 15:48:47 UTC
From: pas@jupitercmc.ca
Message-ID: <1993Oct12.154847.16016@venus.ic.cmc.ca>
Source record: 275019

Hello,

There seems to be a difference in the way the AM receive on
my new Yaesu FT530 works compared to that of the
instruction booklet.

The instruction booklet says that if you enable AM receive
(key sequence: FM, Set/0, FM, PRI/VFO) that it affects "the
entire VHF receiver". Yet I am finding that I seem to be
able to store the mode along with the frequency in the
memory channels and then scan a mix of AM and FM
frequencies. It also seems that one can set both VHF
VFO's to one of AM or FM.

I am curious if anyone can add to the explanation on how AM
receive works on this fine radio? I would guess the
design engineers made an enhancement to the firmware after
the documentation was completed...

Thanks,
Peter

As far as I am concerned it is not a "CYA" just an advisory. I posted what
I had received and that was in it. My guess is, having seen official
modification sheets from Kenwood and Yaesu with this disclaimer in it, that
this must have been transcribed from some sort of "official" sheet from
Yaesu. Just a guess.

3535. Monitoring public service

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-12 15:50:40 UTC
From: hlb@li.loral.com
Message-ID: <hlb.750441040@loral>
Source record: 275022

Is it true that some public service dispatching, especially fire,
uses tones to just turn on the radio reception in the station to
which the run is addressed?

If so, can the CTCSS feature in a rig be used when monitoring the
fire frequency to just hear calls meant for a specific station?

3536. Summary of Ethernet coax responses

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-12 15:55:22 UTC
From: gdo@aloft.att.com
Message-ID: <CEsK8K.JL1@cbnewsm.cb.att.com>
Source record: 275018
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antennas

Hi Gang,

First, many thanks to the many people who responded to my original
query regarding the merits of Ethernet coax for amateur radio.
I have a bunch of the thick Teflon stuff, I believe made by DEC.

Here are some of the pertinent points:
1. Attenuation at 50 MHz is 1.2 dB per 100 feet. This is comparable to
Belden RG-8U poly core, a hair worse than Belden RG-8U foam core,
much better than RG-213U, and worse than Belden 9913.
2. The velocity factor is 0.66% as is RG-8U poly and RG-213U. TG-8U foam
is 78%. I don't know how 9913 rates here.
3. This assumes Ethernet *foam* core. I have Teflon so I don't know what
effect that will have.
4. It's still questionable how well it'll stand up to the rigors of
the sun's UV rays over the long haul. One respondee is using it for a
UHF repeater and so far so good.
5. Belden 9913 (air core) is less lossy than the foam and poly core RG-8U.
It looks to be one of the best RG-8U types available.
6. The shielding of the Ethernet cable is as good as one can expect.
It has braid then foil then more braid then more foil. You ain't gonna
leak much outa this stuff.
7. Given that it is Teflon, it is easier to solder PL-259 connectors to it.
You can apply more than enough heat without damaging the cable.
I know this from practical experience. It's pretty easy to mess up
9913 because of the air core. I also know this from practical experience.
8. Ethernet cable is BIG bucks if you buy it new. Buy 9913 if you want
good cable.
9. The price was right, making it one heckuva good deal! :-)

Again thanks to those who helped. I'm going to use it for some 2m and
220 antennas I'm planning and for some HF work.

3538. ATV on 439.25

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-12 16:07:42 UTC
From: ker@mtgzfs3.att.com
Message-ID: <CEsKsw.5G0@cbnewsj.cb.att.com>
Source record: 275014

Recently, one of our "friendly" (sarcasm intended) hams put an ATV transmitter on the air on 439.25 in close proximity to our 440 repeater which has its input on 443.875. Simultaneously with the start of operation of his setup we started getting a "buzzing" sound on our repeater input. Upon visiting our repeater site, using my FM transceiver I noticed a very strong signal on 443.750 which I understand is the audio sub-carrier for an ATV transmitter operating on 439.25. I can also detect the same sound near our input frequency but much weaker in level. By the way, I'm listening on the input at the base of our repeater site, thus signals I hear in my car our probably much weaker than those the repeater hear. Whenever our "buzz" is present, this same signal exists on 443.750. Likewise, when the 443.750 signal goes away, so does our buzz.

This leads into a few questions:

1) What does ATV audio normally sound like if detected on a narrowband FM transceiver?

2) Is the buzzing a result of what he uses for modulation. I believe his goal is to get as much RF energy on our repeater input frequency as possible. For all I know he's modulating the audio with a 60Hz square wave.

3) What's the bandwidth of a typical ATV audio signal. (I wasn't satisfied with the info in the ARRL Handbook)

4) Is it possible for ATV operation on 439.25 to coexist with a high density of repeaters on 440. This is in the New York/New Jersey metropolitan area.

In case one asks, this ATV operation I'm describing is not sanctioned by the local frequency coordination body, i.e., he's not coordinated.

Lets see - the term "homophobic" was created by gays to try to label people who disagree or are offended by their behavior as abnormal and to try to give the appearance of the homosexual behavior as normal. So does this mean a person who disagrees or is offended by child molesters, rapists, or cannibals is a molestiphobic, rapiphobic, or cannibalphobic?

Amateur radio? This is a HOBBY, _not_ a "lifestyle".

>at the expense of a social minority and the radio hobby. Does the

How does QST promotion of amateur radio (or even the failure to accept
an ad) do anything to the expense of a "social minority" much less
the "radio hobby"?

>ARRL disallow ads with the letter "VFW" in it? How about
>"senior citizens", "NRA", "women", or "handicapped"? No?
>Why not? Why do they discriminate against gays?

How is failure to accept an ad equated with discrimination against
homosexuals?

>I think the ARRL should get out of the social commentary business
>and run the Lambda ads, just like they run any ads for prospective
>special interest radio nets. The sole criterion should be, as long
>as its legal and non-libelling, "Does it advance the radio hobby?"

A)QST is not in the social commentary business now; others might
construe the acceptance of an ad from an admittedly controversial
group as getting _into_ the social commentary business.

B)Since homosexuality (or associated practices) IS illegal in most
states, I guess you agree they shouldn't take the ads.

C)How does accepting an ad for a homosexual group "advance the
radio hobby"?

>Until then, Lambda ought to wield as big a stick as they need to
>get attention of the mule as dense as the ARRL OF's.

No, Lambda ought to take the political agenda elsewhere.

I am offering $225-250 for the RCI-2950 unit.

It can receive and transmit 26-32 Mhz. Features:
o NB/ANL for improved noise muffling
o Dimmer control
o Roger Beep optional
o Built in SWR meter
o Split freq. (for repeaters) with programmable steps
o Scan mode (for memory mode, stores 10 memories)
o "Locks" to CB channels (Ch40 will be displayed instead of 27.4050)
o Two UP/DOWN switches on microphone
o 8 watts out (AM & FM mode), 25 watts (USB,LSB)
o PA feature and CW keyer compatible
o RF power knob (1 watts - 8 watts / 5 watts - 25 watts)
o Clarifier + RF gain knobs.

Please respond to: nick@hotcity.com

I have it. I had numerous problems getting it to run due to problems with the dongle (hardware keylock). John Hoot of SSC was very helpful and sent out two new dongles and an updated copy of the software (7.0i). However, having had it up an running for a week, I have now gone back to V 6.0 which gives better results on my 386. V 7.0 REQUIRES a 486 to give any kind of useful result since the new graphical user interface consumes a bunch of cycles. Don't believe it when the ad says it works under Windows. It will (maybe) on an Intel *6*86 , but not on anything less.

V 7.0 does, however, have some nice features such as autotune (for the digital filters), receiver control, mouse control of the image processing (smoothing, gamma, brightness, pseudocolor) capabilities. Also, unattended operation works much better under V 7.0.

Source record: 275005

Let's face it, that Motorola "Public Service" ad we all saw in the
October issue of QST didn't look to me like the work of a
professional Madison Ave. ad agency. In my opinion, several people
in security got the go ahead to place an ad that they probably
wrote themselves. Looks like the guy who wrote it drew the
sketch of the un-smiling working class as well ! (Low budget
advertising ?? :-))
I haven't called the 800 number to find out more info, however
I assume the ad was not specific enough in what they wanted
to communicate to the reader.
Truth is, I don't think Motorola is so concerned about their
software being modified or second sources selling their
Radio Interface Box (RIB) as much as they are about the
potential of real criminals copying "codes" from cellular
phones and making free calls. This is a real danger that can
do major damage to that company and the whole industry and
I do understand their fears. I imagine they advertised in other
'tech' magazines, hoping someone would know more info who
is doing this type of hacking. Bell in the 1970's became extremely
concerned with hackers when they realized what the "blue box"
and "red box" could have done to their business. I sure would
like to see a clarification of the ad printed somewhere down the line.

>usually a pretty small guage.

About 20 years ago, when I was WA2HHO, I obtained a Hy-Gain 18HT Hy-Tower
multiband vertical. I was very fortunate to have a large hayfield at my
disposal. For radials, I bought about 2000' of #18 Copperweld (remember, it
was a LOT cheaper 20 years ago). By sheer luck, Jerry Sevick (W2FMI?) had just
published one of his famous articles, and he suggested using radials that
were 0.4 wavelength long, as opposed to the conventional notion of 0.25, and
he also showed that 0.5 wavelength wasn't worth it.

So, I grabbed a half-moon shaped lawn edging tool and proceeded to put down
12 radials for 80m interspersed with 12 for 40m. (I.e., the 80m radials were
at 0, 30, 60, ..., 330 degrees, the 40m radials at 15, 45, 75, ..., 345 deg.)
I managed to work Tuvalu on 75 phone the first day it was on the air as an
independent country - about an hour after local sunrise in New York. I also
worked Mauritius Island on 20 and was 3 S units stronger than a neighbor with
a Telrex beam on a 60' tower.

Yes, the ribbon cable is pretty small guage, but if you put enough of them
down, the current flowing in each wire will be reduced, and so will the losses
caused by the small wire diameter. The radial system is the most important
part of a vertical antenna system, as Sevick proved in his QST articles.

I am looking for a controller program that can control a Yaesu 747GX
HF radio. ANyone have any ideas where I can get something like that?

Thanks in advance

Herb

All this is really is another lame attempt by gays or pro-gays to put up a smoke screen about their sick behavior to delude themselves in believing homosexual behavior is normal. I personally don't fear gays but am nauseated by them as I would be by human feces or vomit, or by the though of sex with animal, or incest, or canniballism.

If you can't get the point by now, you are really deluded in your thinking.
Anyway, enough of this debate which is out of the scope of Amatuer Radio.

>
>Gary Coffman KE4ZV

Gary, you are part of the 99% of the hams who don't understand.
At the end of the chapter on transmission lines in the ARRL Handbook
is a chart that shows the transmission line losses given the SWR at
the transmitter and the SWR AT THE ANTENNA. Your above "solution"
is just one of the possibilities. That chart in the Handbook indicates
that the range of possible losses in the transmission line with an
SWR of 1.6/1 at the transmitter is 2db to 6db corresponding to SWRs
of 2.3/1 up to 100/1 and higher AT THE ANTENNA and you cannot tell the
difference by SWR measurements at the transmitter end.

100 ft of RG-58 has 2db loss on 17 meters ONLY WITH AN SWR OF 1/1.
Take a look at the other chart, the additional loss in db caused
by standing waves. The key concept is that you absolutely cannot
determine the SWR at the antenna by measuring SWR at the transmitter.
With an antenna SWR of 20/1, you will get an additional loss of
5.5 db. Factoring that additional loss into your Smith Chart spiral
makes it spiral out to 20:1.

Try it yourself. Terminate 100 ft of RG-58 with a 1000 ohm resistor.
SWR at the antenna is 20/1. Measure the SWR at the transmitter end
on 17 meters. You will read less than 2/1 just like a G5RV.

Hit one of my pet peeves with this one!

ATV doesn't belong on 439.25 in any area where FM is in widespread use between 440 and 444 MHz. Especially if these are the FM repeater inputs.

Yes, what you're hearing is the sync buzz of the video and the audio subcarrier on 443.75 MHz. This is usually a 4.5 MHz FM subcarerirs injected into the video transmitter. This is not how real TV stations do it, but it is the way most of the cheap ham junk works.

>1) What does ATV audio normally sound like if detected on a narrowband FM

>For all I know he's modulating the audio with a 60Hz square wave.

That's not too far off the mark. The buzz is the sync frequency. That's usually what you hear with a narrowband FM radio listening to the ATV transmitter.

>3) What's the bandwidth of a typical ATV audio signal. (I wasn't satisfied
>with the info in the ARRL Handbook)

It should be no more than 6 MHz, but frequently the ATV transmitters are double-sideband and are more like 12-15 MHz wide. Most of these are made by PC Electronics. These are pure junk, and should not be allowed to transmit anywhere. Unfortunately, they are very cheap to buy, so everyone uses them.

>
>4) Is it possible for ATV operation on 439.25 to coexist with a high
>density of repeaters on 440. This is in the New York/New Jersey metropolitan
>area.

I operate a linked repeater system in Houston which uses many links in the 420-430 MHz range. I have experienced SEVERE interference to my operations from ATV operators on 421.25 MHz. I have tried every kind of filter on both my link receivers and the ATV repeater transmitter and was not able to solve

the problem. I eventually moved frequency on the links to get away from the interference. In my opinion, there is no way to clear up the problem without moving either the ATV system or your repeater input.

Your best bet would be to talk to the owner of the ATV syste. Try to make him understand that he's wiping out your input. Perhaps you can reach an agreement of some kind. The technical solutions are somewhat limited.

Good luck.

>
>1) What does ATV audio normally sound like if detected on a narrowband FM
>transceiver?

The audio itself normally sounds overdeviated since it's 25 khz
deviation, but if you talk quietly you can often copy it on a narrowband
rx. The buzzing is more likely from the synch pulses.

>
>2) Is the buzzing a result of what he uses for modulation. I believe his
>goal is to get as much RF energy on our repeater input frequency as
possible.
>For all I know he's modulating the audio with a 60Hz square wave.

I don't know about wanting to get input on your repeater, but the buzzing
is likely the 59.97 hz synch pulses used by NTSC TV signals. Our atv
equipment around here makes that noise when you tune into or near the
video carrier. (Probably depends on how good the limiter is in the
receiver)

If he wanted to get more signal into your repeater, he should have moved
his video carrier onto it - the frequency he is using is the one normally
shipped with atv equipment - the national atv simplex frequency.

>
>3) What's the bandwidth of a typical ATV audio signal. (I wasn't
satisfied
>with the info in the ARRL Handbook)

If it's Vestigial SideBand (AEA makes the only one I know of) then it's roughly 5 mhz wide above the carrier and 1-2 mhz wide below. Most of the other systems are essentially DSB, but some have tweaks in them (PC electronics) to de-emphasize the lower sideband, so they might be 5-6 mhz above and below the video carrier. There is the audio carrier 4.5 mhz up (and down in DSB) and it's about 75 khz wide overall (25 khz deviation x 3khz audio bandwidth). Most of the energy falls in the first mhz around the video carrier, but the high frequency (sharp edges, etc) information is important too. Color burst would be about 3.579 mhz out from the carrier. Your repeater input is 4.625 mhz above the video carrier, still within the normal bandwidth of the atv signal (DSB or VSB) and what you are likely detecting are the vertical synch pulses. This is am modulation, so perhaps you can eliminate the noise by putting a better limiter in your receiver.

>
>4) Is it possible for ATV operation on 439.25 to coexist with a high
>density of repeaters on 440. This is in the New York/New Jersey metropolitan
>area.

439.25 is one of the standard ATV frequencies - used as both a simplex and often as a repeater input for the only 440 atv repeater pair, with input on 439.25 and output on 421.25. These are chosen to correspond to standard cable system frequencies to allow the use of cable ready tv's as receivers (439.25=catv60, 421.25=catv57,) I believe there is at least one 440 atv repeater in use in the nyc/nj metro area using that pair. If so, it's probably coordinated. (I think i saw it in the repeater directory). There is also one over in Philly, and I think one in Jersey someplace. So apparently they can co-exist.

Co-existing with fm repeaters and stuff is hard. Our atv repeater is coordinated in upstate ny (relativly in the boonies frequency crowding wise), but we get whacked pretty solidly by a packet link and a 440 repeater on the far side of the hill. Best we can tell we don't bother them, but they sure tear us up - rendering our system unusable when they are in operation.
Right now we are trying to fix the problems with filters and directive antennas at our site, but we may have to talk to them about moving - we can't because this is the only available pair for this kind of activity.

>
>In case one asks, this ATV operation I'm describing is not sanctioned by the
>local frequency coordination body, i.e., he's not coordinated.

why does he have to be - is he running a repeater? If he is just running an atv station, trying to work a coordinated repeater, I can't see that he needs any coordination. It might be a lot more polite to work something out between you all - but I don't know of any requirements that he be coordinated. 439.25 is the standard dxing frequency on 70cm atv.

You may be able to filter out some of his signal with cavities on the carrier and audio subcarrier frequency, that is where most of the energy is. Might also both look into directive antennas to cover your desired areas. How about PL on the repeater input? Most atv repeaters have to use the equivalent to keep from being keyed up by fm stations.

Even if this guy is doing this to get your goat (and I don't know if he is), you are probably going to have other users on the same frequency by and by. 440 is *the* band for atv, you can make reasonable amounts of power without being too exotic (you can buy a 100 watt amp off the shelf), antennas are easy to build, and best of all - any cable ready tv is a reciever, so you can get lots of rx only participants without having to buy anything special. Video gear is becoming commonplace around the house - so buying a transceiver and joining the fun is becominng more common. Here in ithaca we went from no atv activity to a repeater and regular use in our public service events in the last 3 years. When we do our show and tell sessions (like for JOTA and the local mall show this weekend) atv is a regular part of our setup and gets a *lot* of interest. So even if this guy gets bored and goes away, you are probably going to have to deal with 439.25 atv sooner or later. And we're *all* looking for solutions that are fair and equatable.

I'd be interested in knowing more about your situation and how things work out in the end.

Oh, I get it. Only groups that somehow offend you personally should be
discriminated against.

By the way, equating NAMBLA with all homosexuals is a very inflammatory
and ill-informed action. NAMBLA, as I understand it, is the "NAtional
Man-Boy Love Association". To suggest that all homosexuals condone
child molestation is ludicrous.

When using this radio with a car antenna or home external 2 meter antenna, on some freqs the radio howls with the 's-meter' at max value. The howling occurs when near the Tysons Corner area, near Key Bridge (in Washington, DC) also near Potomac Mills shopping Center (30 mi So of Wash). The radio has no problems with the rubber duckie antenna except limited range.

I have a Kenwood base station radio which has none of these problems.

I think this is an intermod problem or adjacent channel splatter problem. When using this radio in Wash DC near Key Bridge, the noise level was saturating the meter on almost all memory channels. The character of the noise does not change at all when freqs are changed via memory channel.

When talking via repeater, the other end could hear me fine but I could barely detect their voice thru the noise. The radio was really being overloaded I think. I am pleased with the base station Kenwood but disappointed with this radio.

Any other experiences with this radio?

>fire frequency to just hear calls meant for a specific station?
>
>--
>hlb@li.loral.com
>

Ah, a subject close to my heart. In another period of my life I was
a fireman back in California. The Motorola `Quik-Call' (TM) selective
call system was the most widely used tone alerting format for large
fire departments countrywide. The format consisted of two tones sent
simultaneously followed by two other tones (recall the TV program
`Emergency' - almost constantly you would hear the tones being sent
over the firehouse speakers). From the 12 individual tones, a total
combination of 1438 possible codes results. When the proper 4-tone
code is received at a particular fire station's radio, buzzers and
bells are activated and the station's interior lights are turned on
(if at night; what a terrible way to be woken up). Most counties
wire the fire stations' radios so that all radio traffic can be
monitored by the fireman during their daily firehouse duties (a
ceiling speaker is in every room); at night the speakers are muted
until the proper 4-tone code is received. Here in Honolulu, the
speakers are muted constantly - the 4-tone code unmutes the
speakers, the alarm is copied by the firemen, then the dispatcher
will send a long 2-tone signal (both tones sent simultaneously)
to again mute the station's receiver.

Now, firemen tend to be collectors of fire memorabilia; me too! So
I went about attempting to get one of the `Quik-Call' encoders
(model number T1251A). Most logical place to start was Motorola;
they said they used to store old equipment at a central depot
but discontinued that practice and now crush everything instead...
(how sad!) Then I started contacting various agencies
and was able to save 5 encoders from the trash dumpsters.

You asked about decoding the tones: I would suggest you contact
Bramco Inc., 9676 Looney Rd., P.O. Box 1482, Piqua, Ohio, 45356-1482,
513-773-6255; they call themselves the `Tone Technology People'.
They make encoders and decoders for all types of tone applications

and their prices are reasonable. The PL (or CTCSS) decoder in your radio won't do the job. Heck, you could get a tone decoding IC for a couple of bucks and build the circuit yourself.

Hello,

I was wondering.. (here I go, getting myself in trouble again!) .. if
it would be possible to install a 2m antenna on my car in place of my
standard antenna, and have some type of adapter that would allow me to
use it with a(n) HT and also with my stereo (without damaging either one).
Has anyone tried this? I don't know how broadcast AM/FM reception will
be affected, but everything I listen to around here can be heard with
little or no antenna at all, so I don't think that will suffer too much.

I remember seeing combination CB/AM/FM antennas advertised in the
past, with some kind of isolator to prevent the CB from overloading the
AM/FM receiver. Is there any similar product for Amateur Radio use?
Otherwise, I guess I'll just buy a magnetic mount antenna for amateur
use -- but it sure would be nice to have a more permanent solution.

Uh oh, Al - I can see a debate in the making here: you might not want
to say that CW is restricted to the CW sub-bands - it would be more
proper to say that the lower sub-bands are reserved for CW only. Randy
is entirely correct: one can send CW anywhere else one pleases (modulo
your grade of license).

Hmmm. My FT-530 (which happens to have the abovementionned mod) would tune 800-950Mhz (see the note at the bottom of the mod posting) although when tuned in this range it insists on a step rate of 12.5Khz, regardless of the current programmed "step" for the UHF VFO.

Of course, operation of such a rig in violation of ECPA would be illegal.

(If anyone has gotten theirs to step at 30Khz (or even 15Khz, an officially "supported" step rate for the UHF VFO), please post.)

^^^^^
Are we a bit sensitive about our race as well? How long has a group
comprising 30-40% of the US population been considered "endangered"?

Gads, by this reasoning I should have Federal lands set aside for my
"habitat". Hey, I'm a rarer beast than sticklebacks or Ham operators!
[straight, asian-american, left-handed males with AB- blood type < 0.001%
of the US pop. - throw in a Ph.D. and the number drops to < 0.00099% %^)

Watch out! We want to take over and raise the educational levels of
your children!!!! Booga Booga Booga!!!
Everyday is halloween for Gary.

ATV audio is wideband FM - you will probably get something intelligible on
a NBFM system but it will be distorted.

>2) Is the buzzing a result of what he uses for modulation. I believe his
>goal is to get as much RF energy on our repeater input frequency as possible.
>For all I know he's modulating the audio with a 60Hz square wave.
>
The buzzing is due to the sidebands of the ATV signal, which is quite complex.
You basically have spectral lines separated by the line frequency, with other
lines round them separated by the frame frequency (which is 60Hz, assuming a
standard US NTSC type system).

>3) What's the bandwidth of a typical ATV audio signal. (I wasn't satisfied
>with the info in the ARRL Handbook)
>
The audio subcarrier should be right at the top of the official passband, about
5.5MHz above the vision carrier I think (6MHz for UK PAL)

>4) Is it possible for ATV operation on 439.25 to coexist with a high
>density of repeaters on 440. This is in the New York/New Jersey metropolitan
>area.
>
You will probably find that if he were to tweak the xtal in his transmitter
slightly the problem would go away, at least on your channel. You are
unfortunate enough that one of the line-frequency spectral lines is within your
passband - by careful tweaking he ought to be able to get two lines to straddle
your input frequency and so be outside your passband on either side. Of course,
he may well have tweaked up the xtal to achieve the opposite effect.

Are we supposed to conclude that every codeless Technician operator has a similar short between the headsets?

I'm sure that anyone of us can dig up stories of clueless amatuer operators of ANY license class.

By the way, have you ever offered to help this poor gentleman master the code? No? I thought not.

Well, I haven't been in Amateur Radio long...so I've only been to one field day. And, I was there with my new VHF radio and I hooked it up to a 2m antenna that was there. Couldn't figure out why I couldn't hear anything during the whole thing though. Everything checked out....or so I thought.

I only just found one this weekend that the SO-239 to BNC adapter that I was using was intermittent. If you bend it in the middle the right way it worked just fine....which is how I use it at home when I'm running packet. The radio on the desk, with coax pulling down from the floor.

The new coax is much heavier and tends to pull the radio off the desk, so I had to go with a different arrangement this weekend.

> ads by the Jewish amateur radio group?

I think you are all missing the important issues here.

Lamda did run ads in QST. They apparently wanted to run further ads. ARRL objected to a submitted ad. Lamda reacted by filing suit.

We don't have any information on exactly what the ARRL objected to. It could be it was something legitimate. After all, ARRL is responsible for the content of QST. Perhaps Lamda was unwilling to compromise. Perhaps they were looking for an issue to fight over.

So, what is the substance of the issue? It can't be homosexuality alone, since ARRL did publish initial ads in QST.

Unless the real issue is known, all of this debate is so much hot air.

Now Dana, there's nothing immoral about being a ham - morals play no part in what you've said above. Butt (oops) if you'd take the time to look deeper at what two gay men doo (oops) to each other you'd realize their desires are no different than those who commit beastiality or men who prey upon children or those who commit sex with a cadaver. A very large segment of our society find these actions innately disgusting, thus by definition, immoral.

Should we make special hiring quotas for those who commit beastiality? How about a coming out day for beasters? They certainly need their civil rights protected. And if they develope any disease from beasting with their pet sheep we'll need to dump billions of dollars into medical research so they can continue their activity (butt [oops] all the while gently reminding them to practice `safe beast'). And if the Beastiality Amateur Radio Fraternity (B.A.R.F.) wants to place an ad in QST, by all means, no one had better stand in their way.

Okay, it would be a boring world indeed if everyone thought the same way; some issues will never be resolved: code vs no-code, homosexuality, death penality, animal rights, abortion, antenna covnents. In closing, I guess we all have to be thankful that we can express our thoughts openly on any topic. Thank you, usenet.

Jeff NH6IL (back in the days when <THIS SPACE FOR RENT>: WA6QIJ)

Note the follow-up is directed back to .misc where this topic originated; it has nothing to do with .policy.

Well, the 1x3 might cause some problems but to hell with them anyhow.
The only thing that matters is that the FCC knows you're not a tech. :)

Of course, if you really want to confuse the hell out of people, do what
I did.... get an advanced callsign and keep it through to Extra. :)

I use a completely un-modified MCX100 in the car and have never had a problem.
In general, I tend to be conservative when it comes to hacking the equipment
in ways not documented by the manual. At the same time, I've taken Micors and
made "data radios" out of them by removing the control connector and replacing
it with a 5 pin DIN TNC connector and a power cable. This really just
amounts to hacking the control cable.

Afterall, if you start modifying the equipment in ways not supported by the
manufacturer, the reliability of the radio is going to depend on the quality of
your hacking :-)

I have a 1991 SL2 and run 2mtr 440 and HF with not problems. If fact, the day after I took delivery of the car I read about (on of) the Toyota disasters and immediately called the service manager. He had not heard of any problems but decided to call Saturn tech support (I know, sounds funny). Anyway, they hadn't heard of any problems....

Short story long, the service manager called me backed and asked detailed questions about the radio gear: frequency, power, swr of the antenna, etc. He reported this back to Saturn central and they put a car into a test chamber and blasted it with RF of various frequencies at various power levels. The result: NO PROBLEM!!

I should have written Saturn a letter thanking them... Maybe I would have been in a commercial :-)

DIVISIONAL NEWS.

IS THAT A GUN IN YOUR POCKET, OR ARE YOU JUST HAPPY TO BE AT A W.I.A. MEETING?

INACCURATE REPORTS THAT THE DIVISIONAL COUNCIL HAD ARMED GUARDS AT THE COUNCIL MEETING OF FRIDAY 24 SEPTEMBER HAVE BEEN CIRCULATING ON THE BANDS AND ON THE PACKET RADIO NETWORK.

ACTING ON ADVICE, THE DIVISIONAL COUNCIL DID HIRE SECURITY PERSONNEL FOR THAT MEETING.

AS EVENTS TRANSPIRED, THEIR PRESENCE WAS NECESSARY.

UNFORTUNATELY, COUNCIL IS UNABLE TO MAKE A FULL REPORT AT THIS TIME AS IT IS CONTINUING WITH LEGAL ACTION.

THE SECURITY COMPANY HAS WRITTEN A LETTER TO THE DIVISION ADVISING THAT - AND WE QUOTE: "AT NO TIME WERE THE SECURITY OFFICERS PRESENT CARRYING FIREARMS."

FURTHER, THE COMPANY SAID IN THEIR LETTER THAT THEY "HAVE NEVER BEEN, AND NEVER WILL BE, IN THE HABIT OF CARRYING FIREARMS."

THEY ARE THE FACTS.

JUDGE THEM AGAINST THE SUPPOSED "EYEWITNESS" REPORTS CIRCULATING ON THE PACKET NETWORK.

NEW MEMBERSHIP RECRUITMENT AND RETENTION CAMPAIGN

THE MEMBERSHIP CAMPAIGN RUN OVER THE THREE MONTHS FROM DECEMBER LAST YEAR TO THE END OF FEBRUARY THIS YEAR WAS SUCH A SUCCESS, THE COUNCIL HAS DECIDED TO REPEAT THE EXERCISE.

SO, FOR MEMBERS WHO HAVE JOINED THE DIVISION, OR RENEWED THEIR SUBSCRIPTION FROM 1ST MARCH THIS YEAR, OR THOSE WHO JOIN OR RENEW BETWEEN NOW AND 30TH NOVEMBER, WILL GO IN A DRAW FOR A DUAL-TRACE, GENERAL PURPOSE OSCILLOSCOPE.

JUST WHAT EVERY HAM SHACK SHOULD HAVE!

THERE ARE NO SPECIAL FORMS TO FILL IN OR CONVOLUTED QUIZZES TO ANSWER.

ALL GRADES OF MEMBERSHIP ARE ELIGIBLE. IN ADDITION, LIFE MEMBERS AND THOSE WHO HAVE SIGNED UP FOR A THREE-YEAR MEMBERSHIP WILL ALSO BE INCLUDED IN THE DRAW.

THE DRAW WILL BE MADE FOLLOWING THE END OF THE PROMOTION CAMPAIGN AND THE PRIZE WILL BE PRESENTED TO THE WINNER AT THE EARLIEST OPPORTUNITY.

SO, IF YOU'RE THINKING OF JOINING - DO IT NOW!

AND IF YOUR RENEWAL IS COMING UP - GET IT IN!

OR, IF IT COMES UP LATER THAN 30 NOVEMBER AND YOU'D LIKE TO RENEW EARLY, BY ALL MEANS DO IT AND JOIN THE DRAW.

YOU COULD BE A LUCKY WINNER!

GOOD NEWS FOR COUNTRY MEMBERS

AT ITS MEETING OF LAST FRIDAY, 8TH OCTOBER, COUNCIL PASSED A RESOLUTION THAT IT WOULD INSTALL ON A TRIAL BASIS TELECOM'S NEW 1-800 STATEWIDE FREECALL SERVICE.

THIS WORKS IN A SIMILAR WAY TO THE NATIONAL 008 FREECALL SERVICE, ONLY IT'S RESTRICTED TO CALLS WITHIN THE STATE.

COUNTRY MEMBERS WILL BE ABLE TO CALL THE DIVISIONAL OFFICES - TOLL FREE.

THE SERVICE OFFERS FACILITIES TO EXCLUDE STATED ZONES - FOR EXAMPLE - THE SYDNEY METROPOLITAN AREA, AND GIVEN TIMES. THAT IS, IT MAY ONLY WORK WITHIN CERTAIN TIMES.

THE DETAILS WILL BE WORKED OUT IN THE COMING WEEKS. IT WILL BE INSTALLED FOR A TRIAL PERIOD NOT EXCEEDING TWELVE MONTHS.

THE DIVISION AIMS TO INSTALL IT BEFORE THE END OF NOVEMBER. THERE'S A GOOD REASON FOR THIS, AS TELECOM IS OFFERING TO WAIVE THE $160 CONNECTION FEE FOR CUSTOMERS INSTALLING THE SERVICE BEFORE NOVEMBER 30TH.

ONCE INSTALLED, AMATEURS IN THE COUNTRY WILL BE ABLE TO CALL THE DIVISION'S PARRAMATTA OFFICE AND - FOR EXAMPLE - PLACE AN ORDER FOR BOOKS OR OTHER ITEMS WHICH THE DIVISION SELLS, AND USE THEIR CREDIT CARD TO PAY.

THE SERVICE IS SWIFTER AND CERTAINLY CHEAPER THAN PLACING ORDERS BY MAIL.

THE INITIAL FINANCIAL DETAILS HAVE BEEN CONSIDERED AND THE SERVICE HAS BEEN ADJUDGED TO ULTIMATELY BE OF BENEFIT TO THE INSTITUTE. IT WILL CERTAINLY PROVIDE A WORTHWHILE SERVICE TO COUNTRY MEMBERS WHO ARE LIMITED BY THE TYRANNY OF DISTANCE AND THE COST OF CALLS AT PRESENT.

ONCE ADMINISTRATIVE DETAILS ARE DECIDED AND IMPLEMENTED, WE WILL BE ABLE TO SETTLE ON WHAT HOURS THE 1-800 STATEWIDE FREECALL SERVICE WILL OPERATE AND ORDER ITS INSTALLATION.

NATURALLY, COUNCIL WILL PROVIDE FURTHER DETAILS IN THE DIVISIONAL NEWS SEGMENT OF THE BROADCAST WHEN THEY COME TO HAND.

WOULD YOU LIKE TO EXPERIMENT ON VLF?

IF YOU'VE BEEN READING THE MAGAZINE ARTICLES ABOUT THE EXPLOITS OF SOME AMATEURS WHO HAVE BEEN EXPERIMENTING WITH COMMUNICATIONS ON VERY LOW FREQUENCIES - BELOW 200 KILOHERTZ - AND YOU'D LIKE TO JOIN THEM, HERE'S HOW:

GOT YOUR PENS AT THE READY, OR TAPE RECORDER RUNNING?

RIGHT.

YOU APPLY FOR AN EXPERIMENTAL LICENCE FROM THE SPECTRUM MANAGEMENT AGENCY.

ASK YOUR S.M.A. BRANCH OFFICE FOR A GENERAL APPLICATION FORM, NUMBER RB57.

FILL THAT OUT TO THE SATISFACTION OF THE AGENCY AND YOU MAY BE GRANTED AN EXPERIMENTAL LICENCE WHICH ALLOWS AMATEURS TO CONDUCT EXPERIMENTS ON THE 165-190 kHz BAND.

HOWEVER, YOU WON'T BE ABLE TO USE YOUR AMATEUR CALLSIGN - YOU'LL BE GIVEN A SEPARATE ONE. AND YOU'LL HAVE TO PAY AN ANNUAL FEE FOR THE EXPERIMENTAL LICENCE, OF $90.

THE 165-190 kHz BAND IS CURRENTLY ALLOCATED TO AERONAUTICAL RADIONAVIGATION SERVICES. SO, TO CONDUCT EXPERIMENTS, YOU'LL HAVE TO FIND YOUR OWN FREQUENCY AWAY FROM THE AIR NAVIGATION BEACONS.

BROADCAST SURVEY

THE DIVISION CIRCULATED A BROADCAST SURVEY FIRM WITH THE CLUBS POSTING IN AUGUST, AND SUBSEQUENTLY, ALSO ON THE PACKET RADIO NETWORK.

WE HAVE HAD GOOD RESPONSE TO DATE, BUT WE'D LIKE MORE.

IF YOU'RE A MEMBER OF A WIA-AFFILIATED CLUB, ASK YOUR CLUB SECRETARY FOR A PHOTOCOPY OF THE BROADCAST SURVEY FORM. HAVE A GOOD READ OF IT, FILL IT OUT AND MAIL IT TO THE DIVISION AT:

P.O. BOX 1066, PARRAMATTA NSW 2124.

IF YOU'RE A PACKET OPERATOR, SEE IF THERE'S A COPY OF THE BROADCAST SURVEY ON YOUR LOCAL BULLETIN BOARD. IF NOT, LEAVE A SUITABLE MESSAGE AND A COPY MIGHT BE FORTHCOMING.

QSL BUREAU

MUCH WORK HAS BEEN DONE ON THE QSL BUREAU'S OPERATIONS COMPUTER PROGRAM, WHICH WILL SOON BE READY, REPORTS COUNCIL'S QSL LIAISON OFFICER, JOHN ROBINSON.

THE BUREAU IS PREPARING FOR ANOTHER POSTING, WHICH WILL BE ADVISED CLOSER TO THE EVENT.

ALSO, THE DIVISION HAS MADE PLANS TO HAVE HF PROPAGATION FORECASTS INCLUDED IN THE QSL CARD POSTINGS IN FUTURE, PROVIDING AN ADDED BENEFIT TO QSL BUREAU MEMBERS.

MORE ON THE MELBOURNE COMMUNICATIONS CONFERENCE

AS REPORTED ON LAST SUNDAY'S BROADCASTS, AN IMPORTANT THREE-DAY CONFERENCE ON THE DEVELOPMENT AND FUTURE OF RADIOCOMMUNICATIONS AND TELECOMMUNICATIONS IN AUSTRALIA IS TO BE HELD IN MELBOURNE OVER OCTOBER 25 TO 27.

ORGANISED BY THE INSTITUTION OF RADIO AND ELECTRONICS ENGINEERS AUSTRALIA, AND THE INSTITUTION OF ENGINEERS AUSTRALIA, LOCAL AND OVERSEAS SPEAKERS WILL PRESENT PAPERS COVERING SOME 60 TOPICS.

DIVISIONAL SECRETARY ROGER HARRISON VK2ZTB WILL BE ATTENDING THE CONFERENCE IN A PROFESSIONAL CAPACITY AND WILL THUS HAVE THE OPPORTUNITY TO REPORT ON MATTERS OF POSSIBLE INTEREST TO THE AMATEUR RADIO COMMUNITY.

AT THE CONFERENCE, THE PROFESSIONAL AND COMMERCIAL RADIOCOMMUNICATIONS MARKETS WILL BE WELL COVERED BY BOTH LOCAL AND OVERSEAS SPEAKERS. THE MOBILE RADIO MARKET, CELLULAR RADIOTELEPHONES, RADIO EQUIPMENT MANUFACTURING, SPECTRUM MANAGEMENT, INDUSTRY SUPPORT, SATELLITE EARTH STATION TECHNOLOGY AND WIRELESS PERSONAL COMMUNICATION SERVICES ARE ALL ISSUES WHICH WILL BE ADDRESSED.

EXPECT A REPORT FROM ROGER ON A FUTURE BROADCAST AND IN "WIA NEWS" IN AMATEUR RADIO MAGAZINE.

INTERNATIONAL NEWS

OPERATING IN JAPAN

NO, WE'RE NOT TALKING ABOUT BRAIN SURGERY OR KNEECAP RECONSTRUCTIONS, WE'RE TALKING ABOUT OPERATING AN AMATEUR RADIO STATION.

JAPAN HAS MADE IT EASIER FOR AMATEURS FROM OTHER COUNTRIES TO OPERATE THERE, REPORTS THE LATEST A.R.R.L. LETTER FROM THE AMERICAN RADIO RELAY LEAGUE.

BACK IN JUNE, JAPAN REVISED ITS RADIO LAWS TO ALLOW FOREIGN NATIONALS WHO HOLD JAPANESE AMATEUR LICENCES TO ESTABLISH AND OPERATE THEIR OWN STATIONS IN JAPAN, EVEN IF THEY ARE FROM COUNTRIES NOT HAVING A RECIPROCAL AGREEMENT WITH JAPAN.

AMATEURS OPERATING UNDER THE NEW ARRANGEMENT WILL BE ISSUED CALLSIGNS WITH THE "7J" PREFIX. THEY WILL BE GOOD FOR FIVE YEARS. APPLICATIONS ARE HANDLED BY THE INTERNATIONAL SECTION OF THE JAPAN AMATEUR RADIO LEAGUE - J.A.R.L.

End of Broadcast's summary for Sunday, October 10, 1993.

Uh, Jeff, the lower sub-bands *aren't* reserved for CW only. RTTY, data,
and image are permitted in many of the CW sub-bands.

I think Al was entirely correct in what he said.

X needs to be able use calls to the system sockets which must be connected to the tcp/ip protocols. ka9q and derivitives are user level processes rather system level so they do not offer offer services other than those already built into the executable. So, you can't use X over these programs unless you somehow port X into them or port one of the net packages into X.. port is the wrong word. You'd probably be doing a re-write. It would much be easier to write a tcp/ip protocol stack for COHERENNT 4.2 STREAMS.

On the other hand, maybe you could fake some some kind of socket interface via pipes into one of the net packages. That would still be a great deal of programing, especially since pipes don't offer poll() services.

RF resistance is proportional to *surface* area, not cross sectional
area. Skin effect, remember?

The courts have already ruled on this issue. Transient copies done as
part of the process of modifying code don't fall under copyright
restrictions. The courts have recognized that certain features of
electronic media require a reasonable man approach.

I'm really offended by the bigoted, homophobic diatribes by some here that never even approach anything factual. Unfortunately, these attitudes are all too typical among hams. I've heard similar stuff, together with racially and sexually offensive comments, at ham clubs, hamfests, and, in milder form, over the air. Did you ever wonder why hams are overwhelmingly and disproportionately middle-aged, white men? Part of the reason is that women, minorities, gays, etc. have heard it too and concluded that they're not welcome. By limiting the potential for attracting people outside of this narrow demographic base we weaken the hobby. We have to keep lowering licensing standards to keep our numbers up. Instead of trying to diversify our ranks, the League has chosen to validate the prejudices of some of its members.

Personally, I hope Lambda wins its suit.

3595. TCP/IP starup cmds for MFJ TNC 2

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-13 03:57:32 UTC
From: arm@helix.nih.gov
Message-ID: <1993Oct13.035732.7624@alw.nih.gov>
Source record: 274963
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.packet

Quick question. I am setting up TCP/IP packet radio using a MFJ-1270B
(TNC 2). The ROM's must be up to date, because the modem recognizes
the KISS ON command. What is the series of commands the the MFJ needs
to properly initialize it for TCP/IP packet radio? I have been successful
bringing up a PK232 and PK88, because these manuals have the commands listed.
The MFJ manual I have apparently predates the use of KISS mode.

Thanks in advance.

> the publisher's copyright.

Gary, I guess you weren't at the Atlanta Unix User's Group meeting this month(for the rest of you, the program was a couple of lawyers speaking on recent legal developments in the computer field). One of the cases talked about involved a vendor suing for violation of copyright when a third-party vendor who was servicing the computer turned the computer on - the idea being that the third part vendor wasn't licensed to use the operating system software provided by the suing vendor to the customer. Sounds ridiculous you say? I agree, and personally I think this represents a mis-use of copyright law(IANAL and all the other appropriate disclaimers). Evidently, though, the judge didn't agree, as the court found for the plaintiff in this case.

What sticks in my head was that the judge 'found' that the copying of the system software caused by turning on the computer constituted an act of copying subject to copyright law. Or, to quote from the handout: "When computer Operating System is booted and loaded from disk storage to RAM an unauthorized copy has been made by the third party computer service provider".

This is purely speculation of course, but one has to wonder if this case might have in some degree prompted the Motorola ad. With this case(MAI Systems v. Peak Computer, Inc. for those of you who want to know) as a precedent, Moto's lawyers might very well think that they can now keep third-party service people from 'servicing' Motorola radios - time for them to come out with guns blazing.

Gary, your comments make sense...but evidently the law doesn't have to make sense. Based on the results of MAI Systems v. Peak Computer, Inc., evidently it doesn't even have to be sane.

Actually, it's "Break, break, break" according to my books, but
"Break" is generally used for "important", rather than "Hey, I'd
like to get in on this ragchew."

[...]
>What irritates me is that the one or two times I've said "break, break" (in
>the guise of calling 911) in my ham-life on a repeater, I have to then ask to
>use the patch, get an acknowledgment, etc, etc. If/When I say "break, break",
>shut up and let me call 911. If not, then what's stopping me from saying
>"salad, salad" (other than being ignored as a cabbage-head)?

I think that may just depend on your repeater group. If it's a loaded up
machine, you may need to ask to use the phone patch. If the repeater
trustees have already given you the codes to the phone patch, then they
should probably trust you enough to assume you wouldn't be using it
without _some_ good reason, if the machine were loaded. Maybe the
people running repeaters out here are just more lax about things.
They *would* like it if you gave your callsign before sending the patch
codes, though. ;)

But Dana, `restricted' is too strong a word to use; CW is not restricted
to only the lower sub-bands - one can use CW anywhere.

What's DoD 466? DoD = Department of Defense?

Definitely..... how about the UK amateur (of many years standing) who, after
a lifetime on HF, decided to put up a 2M beam. He asked and discovered that
vertical polarization was used for FM, so he duly erected his beam with this
in mind..... he didn't have much luck though, because his 'definition' of
vertical polarization was to have the boom vertical..........

JNOS has the problem that memory management and processes are built in..
Also Coherent 4.0 has no streams and MSG is missing for the original
release of 4.0.0 . Waffle might be easier on 4.2 but I havnt
had a chance to look at the code

Yeah, but despite the dreaded "phone police", what really killed
the phreakers was the change to *out of band* signalling. In other
words, lawyer threats didn't work, but a technical fix did.

I dunno, Bruce. Maybe it was too much CW. OR maybe you held on to your root a bit too long the last time you Pee Peed for Pappy Motorola. Maybe you're smoking something the Pee test won't pick up. But whatever it is, you sure are coming across about as stooooopppiiidddd as a rock.

Why don't we take a little review of copyright and contract law. Now I'm not a lawyer but considering my business, I buy one fairly often, often enough to at least understand the basics.

Very important concept: Copyright law regulates making copies. Contract law and the Uniform Commerce Code regulates everything else. I'll pause for a moment while that sinks in.

....

Good. Let's get a bit more advanced. The copyright laws let the CR holder specify most of the terms under which a work may be copied. The law, under the concept of fair use, removes some control from the CR holder. As publisher, I can, for example, specify the terms under which my magazine is reproduced. Like most publishers, except for fair use, I don't permit reproduction without compensation.

Very important concept coming: When I sell you a copy of my magazine, that COPY belongs to you according to the terms of the UCC. While I still have the power to restrict your copying it, the copy you bought belongs to you. You may read it. You may tear it up. You may chop it up into little pieces and scatter them to the wind. Or you may glue them back together in mosiac. You can even sell that conglomeration. All these property rights you get have nothing to do with copyright law and everything to do with contract law. The contract is implied under the UCC when I deliver a product to you and you give me money.

Even more important concept coming: The only contract terms that apply
are those in effect when the transaction is consumated. Ex post facto
terms have no validity. That is why shrink wrap "licenses" on software
are useful only to sit your coffee cup on. Before the transaction is
consumated, we may each specify terms. I might, for example, specify
that you must only read my magazine from front to back without skipping
anything. IF you agree to these terms by, for example, signing
a sales contract or even paying your money in the presence of a large
sign in your direct view that specifies the terms (implied consent),
then you are bound by these CONTRACT terms (NO copyright involved.)
If you violate those terms, I can sue you under CONTRACT LAW, NOT
copyright law. (The restrictions on implied consent are so severe
as to not really figure in this discussion.)

Moving closer to the issue at hand, the reason you cannot hack VMS on
your workstation is because your company signed a license agreement
(contract) BEFORE VMS was delivered to you. That contract specifies
a number of things, among them, that you cannot "hack" the system
and that you cannot defeat the license manager. On the other hand,
I legally can and did hack my shrink-wrapped copy of Unix to permit
unlimited logins. The reason I can is because there was no contract
other than the implied UCC contract in effect at the moment I handed
the dealer the money for box containing my COPY of Unix. The legal
fiction printed on the box that claims that I accept a license
agreement (contract) by virtue of opening the box is just that - fiction.
The sale transaction ended when the cash drawer closed. Anything
after that is ex post facto and thus null and void. The courts
affirmed this concept regarding software several years ago when Louisana
tried to pass a law making shrink wrap contracts binding. Unilateral
contracts are never binding.

Working our way around to your company's precious little RF boxes, let's
see what happens If I were to buy a Motorola radio. I would go in the
2-way shop and pick out a radio. If I am paying cash and don't want it
installed, I hand the guy behind the counter the cash and he hands me
a box containing a radio (containing your precious software). The
transaction is consumated and since I didn't sign anything, it is
governed only by the UCC. UCC says in a nutshell, I bought it, it's
mine and I can do with it what I like. I might want to take it home
and make a lamp out of it. Or use it as a target. Or modify it.
Or reverse engineer it. Maybe even add features. It is all legal
because I own the radio AND the copy of the firmware delivered with it.
The Copyright law says I can take my copy of the software that I own
and do with it whatever I please as long as I don't copy it other than
according to the fair use doctrine. Modifying it to suit my needs
is included. Why, I could even disassemble the software, learn
what it does and write a new version that does it better.

The only way Motorola could keep me from doing that would be to have
required a signed contract stating those restrictions as a part of
the sales contract. Your lawyers know that too which is why they
are having to resort to rattling their sabers in the print media.

Even a toothless tiger can still roar, I guess.

Oh, hey Bruce. If you decide you need to reply to this, please use just a tad of Netiquette and delete those parts of this article that don't pertain to your pithy reply.

>Thank you for welcoming me to the real world. Fortunately (or
>unfortunately depending on how you look at) I've been in the real world
>(tm) for awhile now. Let me know when they let you have a real peek.

Oh, I don't know. Almost 10 years ago I designed from scratch
a fully synthesized wide band high power 2 meter radio and built it into
an old Motorola pack set chassis. Took me about a month of hobby time
to do the deed. Based on my experience slinging code and designing
other hardware for most of the intervening years, I'd guess it might
take me 6 months to do a commercial-grade synthesizer in DSP.

Tellya what. If you boys out there in the Real World think it takes
millions of dollars to develope a 2-way radio, boy, do I have a deal
for you. I'll do it for HALF the money. That'll give you Motorolans
plenty of time to fill those little pee cups.

3606. VOX or relay operated PTT

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-13 09:03:34 UTC
From: mcfarlin@mmedia.uucp
Message-ID: <1993Oct13.090334.421@mmedia.uucp>
Source record: 275033

I drive using hand controls. Since I don't have the use of my fingers either, I have to pull over and stop so that both hands can be used to key the mic. A *real* pain.

Any information on a good VOX, relay operated PTT, or other circuit that will connect to the mic jack will be greatly appreciated.

Thanks in advance.

-Dave

>that hams can do anything to be prepared for emergencies, including
>such violations. You must start with a legally compliant station and
>operator before trying to invoke the so-called "emergency" clauses!

Ah more misleading legal advice from Motorola I see. The FCC does
not prohibit the possession of transmitters or receivers capable
of operation outside the ham bands, at least not yet. *Radiating*
a signal, by whatever non-Type Accepted and unlicensed for the service
means, outside the ham bands, is illegal, modification or possession of
equipment are not. Loophole alert: possession of external power amplifiers
modified to work in the Class D CB service is prohibited as such amplifiers
have been declared contraband. The ECPA declares listening to cellular phone
transmissions illegal, but possession and sale of equipment to do so is not
yet illegal.

> BTW, that's why the FCC has licensing for commercial operators and
>tests them on those portions of the rules!

Once upon a time, in a Universe far far away. Commercial operator licenses are now a thing of the past, though station licenses still persist. The FCC has placed the entire burden of proper operation on the station licensee. He may hire anyone he likes to operate the equipment without concern for operator licensing. Those of us who are long time holders of the First Class Radiotelephone License, and those who were operators of the 90 day wonder license mills, are somewhat chagrined about this change, but that's the way it is. The responsibility is now squarely on the shoulders of the station licensee, and getting a commercial station license doesn't require passing a test, just money.

You can store the "MODE" in memory.
Setting the unit to AM can be done on either VFO.
Setting the unit to AM will preclude you from receiving 2M FM.

As for how it's done... from what I heard (I never bothered to check)
they run the signal through the S-Meter diode to demodulate AM.

Hello,

The ARRL publishes a nationwide, including Canada, book called a Repeater Directory. Comes out every April. It has all the info you seek.

Most every repeater is owned and operated by a local ham club, it is an expensive and thankless task. Listen to the repeater long enough and you will soon learn where meetings are held.

>couple of things before I buy it:
>
>1) Will it work with the Kenwood 830s? (it is the correct impedence?)
Maybe, the standard D-104 is high impedance. If you get the base with the
pre-amp in it, you should be able to match it to about any rig. Be sure and
get a wiring diagram with the mike so you will be able to figure out how to
wire for the 830s.

>2) Where can I find a replace mic element for the Astatic that has great
>audio quality?
The original crystal element seems to work fine. The mike element actually has
a greater frequency response than most radios. I have a low pass filter in
mine to roll off the high frequency response to eliminate that "bottom
of the barrel" effect. A friend of mine liked the look of the mike but not
the element, so he removed the crystal element and installed a Heil element.

From: bakalov@ac.wfu.edu
Message-ID: <29gtck$ec6@quad.wfunet.wfu.edu>
Source record: 275042

Hi everyone,
I have a strange problem with my ALINCO and I am not sure if it is
a design problem, a problem with my radio, or result of cutting the blue and
the red wires. The problem is that I can hear stations on 440 that are
actually on 145 MHz. Almost for every memory channel on 2m I can find a
spot on 77cm that receives the same stuff.
I also wonder if cutting the wires voids the waranty and thus I
cannot send the unit back to ALINCO.
Any help will be highly appreciated.

Things are getting better. I took my Technician exam on Aug. 21
and got the ticket on Oct. 12. _ Dave N2WTT

3617. Yaesu FT-2200 2m mods

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-13 13:36:00 UTC
From: tskloss@zeus.tamu.edu
Message-ID: <13OCT199308360891@zeus.tamu.edu>
Source record: 275032

Let's try it this way:

I bought my ft-2200 a few months ago and I didn't have the AM recieve
activated. So I complained and got the mod for it:

AM receive:

1. remove top and bottom covers, then remove speaker.
2. Lift the faceplate retaining tabs on top and bottom to
slide the face off (pull the knobs off first you knob).
3. remove the retaining nut on the tuning shaft and lift
the clear plastic light guide off.
4. The 12 surface-mount sized jumpers are now visible.
5. If AM is disabled, there should be a jumper across number
5. Remove this and reset radio before use. (I think it
is number 5, my radio had only one jumper in place, and
it was the one for AM block-out. If you have more than one
in place, contact me and I will give you the double-checked
version of this mod.)

Now, if you enjoy this mod, please send me any more that you have
heard of for this model. I would like a wide open radio to experiment with
it's power output across the spectrum. I need FM Rx and Tx extended.

Is it common for a radio to require a jump *made* instead of just *cut*? This
would have to be the case for this model since it doesn't have any jumpers
soldered into place. (12 pairs of surface-mount sized/spaced pads numbered
from left to right).

thanks in advance!

> >you'd have to work to find the Ten-Tec stuff.
> I think Ten-Tec will go away soon. They have dropped dealers. OK, they
> have some valid complaints.
Maybe, maybe not...but that isn't why I am (late) jumping in here...

> But they appear to have stopped attending Hamfests. They were not at the
> Atlanta Hamfest this year. (Nor last year to my recollection)
Time was when it was worth attending the Atlanta HamFest (like when
AA4RM and I ran the Flea MArket in the parking garage across from the
Marriott... the fest has moved several times, undergone several
changes in management, and is the cause of much friction in Atlanta.
This is unfortunate, but is no longer the mini-Dayton it once was.

Ten-Tec *was* at Huntsville, and has been for several years. This made
a bigger splash because of the ARRL National being at Hunstville this
year...

> Not that Atlanta was that great this year, but it is the largest GA
> hamfest, and the other major vendors were there.
I did not attend (was away being DX then) so I would reserve comment.
However, the "other major vendors" may have attended because of the
inertial moments from the past... unless the Atlanta 'Fest swings
back, they won't be coming for long...

> I suspect they have given up on the ham market. The big question is: do
> they have enough commercial business to keep going?
Just like ETO could fold up the Ham end of the business and still do
well, so can Ten-Tec. I hope they stick it out, because they are a
class act and make a fine product...and support it well...

> I also think Ten-Tec missed several bets. The lack of a general coverage
> rcvr locked me out for 2 major radio purchases.
This is a personal preference. Sure, it would be nice to have, but I
bought an IC-70 for that....because I wanted the Ham transceiver to
behave like a ham transceiver and not like a jukebox.

> I see no excuse on an HF rig not to provide
> general coverage capability. (If they were still using crystals for the
> LO to switch bands, then they were way behind technically.)
Whoa. Let us look at how general coverage frequency generation is

managed for the most part. To maintain linearity, either we use a very linear, short frequency excursion oscillator circuit, or a mechanical monster like the R-390 series, or some other electro-mechanical arrangement. For a .5-30Mhz receiver, this is not trivial to shove into a small box. The newer "technology" of frequency synthesis works just fine, but carries with it a very VERY high price -- noise from the sythesizer which makes for reduced receiver performance. True, the state-of-the-art is moving forward, but the fact remains, using the tried and true Ten-Tec receiver design, they produce a greater dynamic range than the riceboxes, even using the "old, out-dated technology", PLUS, the Ten-Tec Omni series does something no riceburner would DARE try: they run two VFOs into the mixer simultaneously, and since their mixers are very VERY quiet, you can listen to BOTH VFOs at the same time! This allows, for those who can't fathom (because the riceboxes don't have a magic button to permit this, and hence have no idea of what the feature is used for) the operator to listen to the DX station's transmit, *and* the pile-up, so one can tail-end the last successful caller and be next in line! It works, mate!

I would gladly sacrifice general coverage for a fine quiet ham band receiver...especially quiet. Phase noise is a bear, and makes for problems with other equipment as well (like computers). This is one instance where not being on the bleeding edge gives Ten-Tec a superior receiver implementation, albeit with older technology. Some things just work better the old way, I guess... ;^)

> Anyway, the new rigs look pretty good, but still lack features. I would
> consider them, but not if I cannot look at a rig without driving to TN!
Geez, it's so pretty in east Tennessee this time of year. The Smokies are pretty anytime, but now the leaves are turning and it just is magnificent...good draw for the XYL to go along and sanction the purchase! ;^)

> than code/no-code, which isn`t an issue as far as I am concerned.
>
> Any comments?

I am running for Director in the Delta Division (Tennessee, Arkansas, Mississippi, Louisiana) which is outside your specific area, but I would usrge you to read carefully the candidates statements, even call them individually and ask them what issues they see facing the ARRL and Amateur Radio. I hardly think the issues are/is limited to CW/no-code...

There are many challenges facing Amateur Radio today, and the election for Directors of the ARRL has a bearing upon *all* amateur operators, whether members or not. Like it or not, the ARRL is seen by the Fed. Government as representing the interests of the Amateur Radio Service, and most foreign governments regard the ARRL as the voice of Amateur Radio in the USA.

I'd be happy to discuss these issues with anyone interested, but probably via e-mail unless there is general interest.

But, please vote. It will make a difference in the hobby, and new blood and new ideas are needed to guide us into the 21st Century.

Gosh, as I step down from the soapbox, I realize the air is thin up there... ;^)

3620. FT-470 mod clarification?

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-13 15:09:23 UTC
From: Will Collier <COLLIER@gallant.apple.com>
Message-ID: <1993Oct13.150923.6711@gallant.apple.com>
Source record: 275039

It appears the modification sheet that I got from Yaesu to open up the RX/TX on the FT-470 is next to useless.

It explains that you are to unsolder one side of the Lithium battery, lift it out of the way, and solder a 0k Ohm Resistor in position R69. ....But of course the pc board is not labelled and the diagram on the mod sheet is not detailed enough to determine where this the jumper is to be placed.

My brand new FT-470 is opened up, guts hanging out, on my bench until I get the proper mode information for this unit. Can anyone help? Is there a better mod sheet?

Thanks,

Will KB5WRK

As many others have pointed out, the fundemental problem here is that there is no license agreement that prohibits any particular use or modifciation of the radio. If motorola feels that the company jewels are on the line, they can find a different mechanism of protecting them.

While it's true that the firmware code is copyrighted, a copy of it is SOLD to me, not LICENSED to me when I buy a radio. Therefore, when I buy a motorola radio I'm *buying* it and not licensing it, and I can do whatever I want to/with it.

>From Salt Lake Tribune (Utah) October 10, 1993:

JAMBOREE-ON-AIR LETS SCOUTS BE ON SAME WAVELENGTH
By Michael Nakoryakov The Salt Lake Tribune

Technically minded young Utahns will join 400,000 Scouts and their guides worldwide Oct 15-17 to exchange ideas and information through shortwave amateur radios.

Jamboree-on-the-air, which for 36 years has been sponsored by the 170,000-member nonprofit American Radio Relay League, offers Scouts who live thousands of miles apart a chance to get acquainted.

Fred Gailey of Sandy [Utah] read about the Jamboree-on-the-air in a magazine for the amateur radio enthusiasts and decided to get involved.

"It was such a great idea -- Scouts will have an opportunity to learn more about what the amateur radio is and talk to people in other states and countries," Mr. Gailey said.

"At this point, I am not sure how many local Scouts will participate, but I know that my son, Doug, and his friends will."

Mr. Gailey will offer the young operators his ham radio and will coordinate their work.

The three-day program will include a variety of ham radio modes, including single-side band voice, Morse code, amateur television and computer-link communications.

People who own short-wave radios may listen in by monitoring the following frequencies: 3.740 MHz, 3.940 MHz, 7.090 MHz, 14.290 MHz, 18.140 MHz, 21.360 MHZ, 24.960 MHz, and 28.990 MHz.
[end]

Now THERE'S a neat idea -- let the public listen in, and tell them how! When was the last time an amateur radio organization ever invited the public to listen in?

Since CW is at least as narrowband as any other mode, it should not matter.
I have personally used CW in the AMTOR portion of the band; when trying to
make my first AMTOR contact I was having problems establishing a proper
connection. After a couple of failed attempts I tapped out a message to the
other operator, who came back (in CW!) telling me to switch to the other
sideband. So it pays for every operator to have at least one mode in common
which is usable in the entire spectrum.

Yes 0.4 wavelength would be good if you were putting down 90 to 120 radials.
If you are only putting down 12 radials then you could get the same
results using only 0.1 wavelength radials. You would still loose half (3 dB)
your power in ground losses because the return patch has to return through
a lot of ground between each radial. The further out you go on the radial
the distance between the radials increases causing the return path to be more
through earth to get to a ground radial wire.
>
>

Agreed the smaller wire guage will work fine for this application.

No. In fact you would like to do just the opposite. The more radials you put down the more it looks like a continuous ground. The ideal would be a metal plate that goes out from the base of the antenna about 0.4 wavelengths or farther.

The Radials are NOT acting like a radiating element as the elements in a dipole does. The radials are return paths for the electric field that eminates from the vertical radiator. The more earth these return currents go through before connecting with a radial wire will increase your ground losses.

This is only true with a vertical that is mounted on the ground. These rules don't hold when trying to make a counterpoise above ground.

>
>Too bad sulfur diodxide doesn't just sort of get absorbed into the
>Ether, in the form of heat, as 1/R^2 on it's way out to Alpha Centauri. :-)

Well, the sulfur dioxide just gets absorbed into water droplets in the air, then falls out in the rain. The resulting sulfuric acid gets neutralized by basic compounds in the soil (usually calcium carbonate) to form sulfates, which then hang around harmlessly until some plant or bacterium uses them to make methionine or cysteine. Since methionine and cysteine are very essential components of proteins and can't be made without sulfur, it sounds like a good thing to me.

But what about all those dead trees?

Now we come to the interesting part. Pollution is usually something that is present in too high a concentration and/or in the wrong place. For things like mercury and plutonium, most places are wrong and most concentrations are too high for plants and animals. For sulfur dioxide, the biggest problem occurs in soils with low buffer capacity. These are usually soils in the mountains derived from metamorphic rocks. There are no basic soil constituents to neutralize the amount of acid rain that falls. The result is dead trees and bright blue dead lakes.

Now let's get back to something appropriate to the newsgroups this is posted in. In the case of RF pollution, it's true that almost no one cares once it gets past geosynchronous orbit. And what constitutes RF pollution is subject to some interpretation, as I consider the broadcast stations that inhabit much of 40 meters to be just so much pollution. I doubt, however, that many people would consider the RF garbage radiated by a PC to be of value. (I know, industrial espionage folks might dissent.) The problem is that there is too much of it and it hasn't passed geosynchronous

orbit on its way out yet.

It seems to me that there is a certain similarity in the two cases. The PC owner who just wants his toy as cheaply as possible without regard to RF radiation has a lot in common with the utility customer who lives upwind of the power plant and just wants his electricity as cheaply as possible, trees be damned. In both cases a shared resource is rendered unusable to one group for the convenience of another. In both cases, a technological fix is available but it will cost some money.

Sorry about the waste of bandwidth, folks. I promise to get enough sleep tonight so I can just let things like this slide by. (And I didn't even say anything about Ether or heat.)

Exactly what you want can be found in the "Repeater Directory" published annually
by the ARRL, 225 Main St, Newington CT 06111. Cost is approx $6.
It also has repeater info for other popular bands, not just 2m.
Also things like band plans, and a small amount of advertising.
Published in small pocket format, perhaps 3/4" thick.

3637. Battle Creek Special - what is it?

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-13 19:52:26 UTC
From: sas@opus.xyplex.COM
Message-ID: <9310131952.AA11760@opus.xyplex.com>
Source record: 275056

This week's OPDX Bulletin mentioned the "Battle Creek Special" antenna. I recall first hearing about this when I heard a talk from one of the South Sandwich Island DXpedition group. One of the audience members asked what the Battle Creek Special was, and the speaker appeared to try to dodge the question. As I understood it, that antenna is some sort of vertical for the low bands that is loaned out to DXpedition teams by something like the Battle Creek Amateur Radio Club. Does anyone know what is so special about the Battle Creek Special, or what sort of design it uses? DXers want to know!

I had the same setup (FT-757-GXII) and D-104. I replaced the element with
a Heil element, and put ferrite beads at the mic plug and where the cord
enters the base of the D-104 (used the snap-on type you can get from
Radio Shack). That solved most of the RF problem.

3639. Charging an FNB-26 with NCD-29?

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-13 20:27:07 UTC
From: RGS%gms@gfimda.UUCP
Message-ID: <931013162707.afc2@GMS>
Source record: 274887

I just received my new Yaesu FT-530 with the FNB-26 battery pack and found something curious. It would appear that the FNB-26 is approximately the same size as the FNB-11 which the FT-470 uses. Also, the desktop charger contacts are in the same location. I was wondering if the NCD-29 desktop charger that the FNB-11 and FNB-12 use might be able to charge the FNB-26 as well as the FNB-27. I know Yaesu now has a 1-hour model called the NCD-42 but $99 is a bit much and I can wait 3 hours on the NCD-29. Does anyone know if this would be possible?

3640. Need 16key touch tone pad

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-13 20:27:33 UTC
From: pcr@vnet.ibm.com
Message-ID: <CEurHy.1u0z@hawnews.watson.ibm.com>
Source record: 275058

In the process of installing a new repeater, I find that I would like to have a local 'control panel'. This particular repeater controller uses only 'touch tone' control. It provides a connection for a local control. What I would like to do is hook up a self-contained keypad (16 keys) that has an audio out line that I could wire directly into the controller. I would very much like it to run on 12 volts.

Can comebody point me at a source for such a keypad?

>

Should be able to. 439.25 is CATV channel 60, placed somewhat below UHF channel 14. I think that CATV channels above a certain number fall into the 'hyperband' some other 'band' designation. But the variety of systems that I have tried mostly seem to work if you can get them to go to the right channel number in the 'cable' mode. My Sony TV does it, and so do other's I've tried, most new VCR's seem to. I check them by using my UHF ht on the carrier frequency sometimes in the store. A lot of manual tuned cheapo B/W tv's seem to tune below UHF 14 down low enough to hit 439.25, but not low enough for the repeater output on 421.25.
All of the RS lcd tv's up to the model 27 seem to tune down also, though I don't know if the current models do. (they only lock on synch pulses, so the ht test won't work)

Most of the tv's and vcr's are not terribly sensitive, since they are expecting to get fed from a cable with a minumum 1 mv signal typically, but they will work. A downconverter can get you 20 db of gain and a good noise figure. A cheapo quagi antenna is easy to build and gives you some useful gain to use with either system.

For public service we usually use a 1 watt transmitter into a quagi aimed at a vcr or tv on another quagi and skip the downconverter - since we are usually operating over only a couple of mile path, it works well.

Oh, check and see what polarisation is in use - it makes a big difference usually. Our repeater uses horizontal, but that is unusual and only because it is in one corner of the county it serves and to alleviate some fm/packet interference that is vertically polarised.

I recently saw a posting that asked about a good source for photo-
QSLs. Either there was no response or I didn't pay enough attention
to catch it...

Anyway, I'm in need of 1,000 photo QSLs (for the VE3ONT EME operation).
Does anyone have a suggested vendor? I tried QST but the only photo
type QSLs were going to be actual photos (i.e. on Kodak paper), not
"real" QSLs.

Thanks - W9IP

If "break" means an emergency then how can someone who tries to use that
to break in on a qso be ignored as a lid without knowing the reason for
the "break".
If the original "break" were ignored then those in qso are the lids for
not acknoleging a possible emergency.

>Ohhh, violence down under. Give us all the dirt.

Well, fantasy down under, more like... Basically, a 'bad element' got itself elected to Council positions a few months back, and they're targetting their enemies (hard to believe people have enemies in Amateur Radio, but there you go).

Anyway, some of us decided to go witness the 'trial' of the accused (who hadn't even been told what he was supposed to have done to warrant having his membership terminated), and the BadGuys tried to have a closed meeting. Somebody suggested that it would not be wise 'if they valued their doors'. This was taken to mean that a mob (complete with pitchforks, torches, KKK paraphenalia etc) would tear the place down.

They had sense in the end, and allowed us access with minimal impediment. They hired three security guards (as Douglas Adams would say, "low hairlines, little piggy eys, and no conversation"), who had very little to do apart from look menacing. A couple of observers thought they saw guns under the leather jackets and said so on packet. I didn't see any myself.

Normally, when attending these meetings, one signs the visitors book, and sometimes a separate attendees list which becomes part of the record of the meeting. The meeting in question was different, in that the BadGuys decided to impose a new ritual: speak thy callsign and have thyself crossed of the computer printout.

One fellow of about 70 (and a member for 45+ years) objected to this, and just signed himself in the book, and invited TheOneWithThePrintout to read it. They argued a bit, then one of the Councillors came out, declared the member to be no longer a member, set the security guards on him, and had him dragged out. Fortunately, he wasn't hurt.

After that, the meeting proceeded normally (the BadGuys failed to have the accused thrown out, because they hadn't followed the correct procedures; that business was adjourned, and they're still at it).

No doubt, Dave Horsfall (one of the accused) will enlighten you further. I've since seen the charges, and not one of them stand up to scrutiny.

The report you read was pretty typical of the person who wrote it: pounce on any error you can find, and use it to discredit everyone associated with the person who made the error.

I bet the ARRL doesn't carry on like this...

3652. I GIVE UP!

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-14 03:28:53 UTC
From: djadams@silver.ucs.indiana.edu
Message-ID: <CEvB06.B16@usenet.ucs.indiana.edu>
Source record: 275067

Did you ever try to do something simple and feel completely incompetent
a few hours later? I have an HW-101 and a 10m 1/2 wave dipole (the largest
I can sneak past my apartment managers). I want to get on 40m. I have
an MFJ 941-D tuner. I tune the radio to get output and try to match the
antenna. Any adjustment lowers the transmitters output. Bring the output
back up and the SWR skyrockets...lower the SWR, power plummets....ARGH!
Help!!!! Anyone...I really need a close, personnal friend who is a ham...

Dave

re "Break-Break"

I remember that I once was involved in semi-serious traffic accident, and needed to use da patch to call the police. Recalling the arguements among my friends on the gang repeater, I clearly broke with "Break-Break". One of my friends came back with about five minutes of lecturing on the proper use of Break, Break-break, etc. As I sat there in the car, watching the snow float down over my crazed windshield, listening to his tirade, I had to think that maybe we could use some other eway of getting the message across in time of emergency. Maybe I should have tried to whistle the two-tone EBSsignal...If this had been an actual break...

Yeah, me too. Amateurs tend to get in the way. I try to convert 'em to true professional gun rights activists as quickly as I can.

Yes please do tell us, even some of us more local blokes would like to know
of all the scandall "up there". Some of us even thought that the VK3 division
had a few problems but nothing compared to (armed?) guards at the Council Meet.
So why were they thought to be necessary in the first place and what did they
end up doing?
We 'mexicans' enjoy a bit of scandal.

3656. HAM-server index

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-14 06:15:50 UTC
From: HAMSinfo@GRAFex.sbay.org
Message-ID: <gate.494DBc1w165w@GRAFex.sbay.org>
Source record: 274802
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Executed: Wed Oct 13 23:05:02 1993

NOTE: New email address:
HAM-server@GRAFex.sbay.org

Index of files.

NOTES: ----------

If you do not know how to use HAM-server, send email to
HAM-server@GRAFex.sbay.org. In the text, place HELP.

If you order a file and do not get it, check the index to be sure you have spelled the filename correctly. If you have ordered the file correctly, then order a new INDEX, as I may have moved the file to a different directory. The system is still expanding, and I am trying to keep it in managable chunks.

Also, if you have ordered files from HAM-server and do not receive them, it might be because your return path is incorrect. My bounce mailbox fills up quite regularly with bounce messages. And, since the path is incorrect, I cannot contact you to let you know.

Orders must be sent to HAM-server. Orders sent to KA6ETB or HAMSinfo are ignored. If you are reading this from usenet, do not respond to this post. You must send email to HAM-server@GRAFex.sbay.org.

A new INDEX is automatically generated weekly and when files are moved or added.

The archives may contain the same file under different names. If you should run across one of these, please let me know with email to
KA6ETB@GRAFex.sbay.org

3657. Re: Hams in a glass house (was Re: Homophobic nonsense and ham radio)

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-14 09:00:28 UTC
From: dbraun@ilx049.intel.com
Message-ID: <29j4fc$1oe0@ilx018.intel.com>
Source record: 275077

"I'm a homosexual necrophiliac", said Tom, in dead earnest.

--

Doug Braun Intel Israel, Ltd. M/S: IDC1-41
Tel: 011-972-4-655069 dbraun@inside.intel.com

3658. 50th Anniversary of the Handheld...

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-14 09:33:02 UTC
From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <CEvrv3.8uD@news.Hawaii.Edu>
Source record: 275076

Gang,
Motorola placed a rather unusual ad in our morning newspaper,
The Honolulu Advertiser, on Tuesday; it read something like this:

M MOTOROLA INC.

ANNOUNCING THE 50TH ANNIVERSARY OF THE HANDHELD RADIO

MOTOROLA PRESENTS THE WORLDS SMALLEST 2-WAY RADIO

THE VICAR

[shows a drawing of a hand holding a radio about the size of a pack of cigs]

BY APPOINTMENT ONLY - CONTACT [gives a name and phone number]

HILTON HAWAIIAN VILLAGE BALLROOM

Has anyone else seen such an ad in your newspaper? The Vicar is
probably a GMRS radio.

Jeff NH6IL (back in the days of the 2-handed held radio: WA6QIJ)

P.S. Dana Meyers please contact me - I want to apologize...

3659. How to find the answers to frequently-asked questions about Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-14 09:44:02 UTC
From: ikluft@uts.amdahl.com
Message-ID: <ham-faq-ptr-1-750591842@uts.amdahl.com>
Source record: 274878
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Archive-name: ham-faq-ptr

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
------------------------------------------------------------------------

This article will tell you how to find the answers to frequently-asked
Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on
the 7th of each month. This article is posted on the 14th, 21st, and 28th of
every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the
rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help
beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP
and from e-mail servers. This article contains instructions for obtaining a
copy of the FAQ. It also contains the table of contents from the FAQ so
that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ-----------------------------------

There are 3 ways to obtain a copy of the FAQ.
1) NetNews
2) Anonymous FTP
3) An Electronic Mail Server

Option #1: NetNews
------------------
If you are familiar enough with NetNews to look through previous articles on
your system, Option #1 above may be the easiest for you. The FAQ is posted
so that it should not expire from your site's news spool until the next one is
posted. Unfortunately, some news administrators do not honor the expiration
dates meant to preserve the FAQ.
```

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers.
If the FAQ has expired at your site, try Option #2 (and ask your news
administrator to honor expiration dates for articles cross-posted to
news.answers if he/she can.)

Option #2: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites
which are directly connected to the Internet. If you don't know how to use
FTP and can't find a friend to help you, continue to Option #3. If your site
is not connected to the Internet, you should also continue to Option #3.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------- --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily
ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #3: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

Table of Contents

Dates indicate last modification.

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (6/93)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (11/92)
* The rec.radio.* newsgroups (6/93)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (new 9/93)
* The Internet File Transfer Protocol (FTP) (9/93)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (11/92)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (9/93)
* Lists of radio modifications and extensions (11/92)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (4/92)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)

Quite correct. I admit I sinned. Forgive me.....!
In practise, cables with larger cross-section have larger surface area than
simple maths would suggest, most large-cross-section cables are made of
multiple strands to make them flexible, giving a boost to the surface area.
I guess, if light weight is of importance, you could use tube, or copper strip,
for your radials.
Just out of interest, how deep does the RF current penetrate into the surface
of the material? Is it a constant, or a function of current density, or
frequency?

>
>>RF resistance is proportional to *surface* area, not cross sectional
>>area. Skin effect, remember?
>
>So lots of thin wires have less resistance than a few thick wires, or not?

Yes. That's the principle by which Litz wire operates. For a given wire gauge, fine stranded wire has lower RF resistance than solid wire because it has more surface area for it's effective cross section. RF is subject to "skin effect" which means that the RF currents don't penetrate deeply into a conductor. Usually only the first 1/1000th of an inch of the conductor is forced to carry all the RF current. That's why silver plating is effective in tuned circuits such as cavities. That's also why copper clad steel wire makes good antenna wire. The steel gives it strength while the thin copper coating gives it good RF conductivity. When dealing with RF, we have to forget much of what we know about the behavior at DC because it doesn't apply the same way.

This is especially important for RF grounds that also have to double as lightning protective grounds. It's why flat braid of 1 inch width has a higher carrying capacity than #8 solid wire. 5 inch flat strap is better still, but for a slightly different reason. In addition to surface area, the inductance of the conductor becomes critical. With woven braid, there is a lot of surface, but there is also a considerable amount of extra inductance formed by the shorted turns of the weave. Those will become local hot spots under a heavy flow of RF. The flat solid strap avoids that problem while still offering a large surface area.

>
>Can comebody point me at a source for such a keypad?

You'll find a suitable pad as close by as the nearest WE500 desk telephone.
The TT pads in these phones run off of telco line voltage, and 12 volts
is acceptable as a substitute. They're also much more stable and reliable
than the cheapie pads based on the microprocessor chips that are used in
new phones.

There are two wires coming from the pad, red and black, ground the black,
and apply 12 volts through a 600 ohm resistor to the red. You can now
take TT audio from the junction of the 600 ohm resistor and the pad
via a capacitor. If you scrounge around a bit, you may find a separate
pad in it's own housing that was used for data entry for credit card
verification at merchant locations. Or you can just panel mount the
pad taken from a phone. Works great, costs little.

Seeing all of the differing opinions and conventions from each area of
the country, if I were in need of an emergency break on a repeater I
would say "Emergency Break, this is KA1CV." No one could misunderstand,
and very few would argue with a station experiencing a genuine emergency
that he didn't use the correct number of breaks.

>an unauthorized copy has been made by the third party computer service
>provider".

If the judge found under copyright law, then he was in error and will
be reversed since this issue has been settled at the Supreme Court
level. If he found under contract law, he may have been correct since
the OS code may have been *licensed* by the vendor to the customer
under strict limitations, IE no one but the customer's permanent full
time employees may use it, or under condition that only the vendor's
employees have the authority to bring up the system from cold shutdown.

This is a different thing. Mutually agreed contracts are enforceable
no matter how ridiculous they may sound. Note that the third party
service vendor should have been acting as the customer's agent in this
case, and under normal commercial law the agent has the same rights and
responsibilities as the primary party. So the agent should have had the
right to boot the code if the customer had that right. But, there can
be specific language in a license agreement to prevent this kind of
action.

If this decision is allowed to stand under general commercial law rather than under a specific license agreement language, it would mean that a customer couldn't hire temporary employees through an agency and allow them to turn on a computer. Since this is obvious nonsense, and has been already decided by the Supreme Court, this decision won't stand as a precedent.

|> computer Operating System is booted and loaded from disk storage to RAM
|> an unauthorized copy has been made by the third party computer service
|> provider".

Without specifics on the case, its difficult to understand the judge's reasoning. For instance, if the 'computer Operating System' is licensed to the company, and the license agreement states that only the company and its employees may utilize it, then, in fact, a violation of the license has taken place.

I fail to see how the judge could have found, in the absence of specific licensing arrangements to the contrary, that turning the computer on constituted a violation of copyright. If you apply the logical extension of this argument, then it would be illegal for anyone other than the original purchaser of a piece of equipment which contains an EPROM to turn that equipment on. Have a friend coming over to watch the World Series? Watch out - better turn the TV on before he arrives, because you may violate the TV manufacturer's EPROM copyright if your friend turn s the TV on!

I suspect that there is more to this case than a simple "copyright" violation. Why one company would sue a "third party computer service provider" over something trivial as turning the machine on is beyond me. (Does this mean that had the original purchaser of the machine "turned" on the computer, and then let the "third party computer service provider" access it, it would be "okay"?)

Without all the facts surrounding the case, its difficult to draw a conclusion. Could be as simple as the defense attorney being incompetent when it comes to defending fair-use doctrine in copyright law.

From: jay@amateur1.cac.stratus.com
Message-ID: <29jjrf$ed8@transfer.stratus.com>
Source record: 274889

Beginning October 14,1993 Alinco Electronics is sponsoring the Amateur Radio Files and discussion forum for a BBS located in Hopedale, Massachusetts. What this means to you is that new information,mods,tips will be available at the earliest opportunity. There are hundreds of files from a variety of amateur radio companies. We expect to have other sponsorships shortly and will provide you an opportunity to feedback to them.

Information on the new Kenwood product was received recently and will be available by this weekend. Feel free to log into the system and download files from the free downloads directory.

For the next month I will assemble a weekly document of amateur equipment questions. This document will provide a historical review of questions and answers for those who would need to know in the future. Questions not yet answered will be shown as outstanding. This alleviates the problem of sorting through all mail in this forum. If you would like your question listed in the Amateur Radio Q&A Handbook send them to:

Jay_Appell@zen.cac.stratus.com

In advance,Thanks for your comments and support.

Jay

3669. Re: Selling ham radios w/o seeing ticket

Subject: Re: Selling ham radios w/o seeing ticket
In article <1993Oct13.181320.2481@malins.mala.bc.ca> babiyd@malins.mala.bc.ca (DALE BABIY) writes

NOTE: This is no flame of Dale. The idea of it being illegal or wrong to sell a radio to a non-ham seems meritorious on the surface to many folks. This is a response to the idea, not the person expressing it, except for the congrats on getting a license.

>> radio was imminent when Radio Shack started selling HTs would have a hissy
>> fit
>> about Penney's...
>
>As much as I love Radio Shack, I have to give them this much, they (at least
>our local outlet) will not sell a radio without seeing your ticket first.

Well, if I lived in your area and my wife decided to buy me a new radio as a gift, she is not licensed, went to RS to buy it and they refused, Tandy Corp. would certainly be hearing from my lawyer.

As has been pointed out numerous times on the net, there is no law prohibiting the sale of an amateur radio, or possession thereof, to/by an unlicensed person. It is only illegal to transmit without a license. RS has no legal grounds to refuse sale of an amateur xcvr to a non-amateur.

*****Insert tongue in cheek*****

However, if it was illegal, we could buy cheaper radios. They could be bought on the street corner for $50.00 bucks or so. You don't believe it? Well, let's see. It is illegal for anyone under 21 to own a handgun in the US. Say a law-abiding adult wants a good quality revolver. He/she goes to the gun shop and pays $400.00 or so for it. Now, that same gun can be bought on the street in many cities by a teenager for about $50.00. It is obvious to me we need a law making it illegal to sell radios to non-hams. Then I can spend less for my next HT.

*****Remove tongue from cheek*****

>Dale Babiy,
>(Call Sign Pending :))

>So what's wrong with cannibalism?

You usually eat your enemies. This in itself may not be palatable.

An all meat diet may cause constipation.

There are no good recipes. You could adapt some pork barbeque ones.

Think of the confusion cannibalism can cause. "Are we having ham for dinner?" "No dear, it's a lawyer tonight - it may be a bit tough."

There is no standard way to butcher a human for meat. This raises several questions such as if you use the shins for Osso Buco, can you use the arms too?

Western man tends to be extremely obese, this would make canabilism a high fat diet. High fat diets are not recommended - so if offered the choice between a sedentary radio amateur and Bambi, choose Bambi.

Other than the above, I see nothing wrong with cannibalism.

Followups to rec.food.cooking?

> back up and the SWR skyrockets...lower the SWR, power plummets....ARGH!
> Help!!!! Anyone...I really need a close, personnal friend who is a ham...
>
Dave -

Can't qualify as your close personal friend, but try the following:
1. Tune the HW-101 into a dummy load at low power setting.
2. Without changing the HW-101 settings, connect the tuner and ant and
tune the antenna for minimum SWR
3. Without changing the antenna tuner settings, tune the HW-101 for higher
power/plate dip.

I have successfully used the HW-101 with other antenna tuners to get on 40m with
a 10m dipole. If this procedure doesn't work for you, then you may have a problem
with high SWR feedback with higher power loads caused by proximity of your dipole
to building structures.

We expect to have other sponsorships shortly and will provide you an opportunity to feedback to them.

Information on the new Kenwood product was received recently and will be available by this weekend. Feel free to log into the system and download files from the free downloads directory.

For the next month I will assemble a weekly document of amateur equipment questions. This document will provide a historical review of questions and answers for those who would need to know in the future. Questions not yet answered will be shown as outstanding. This alleviates the problem of sorting through all mail in this forum. If you would like your question listed in the Amateur Radio Q&A Handbook send them to:

Jay_Appell@zen.cac.stratus.com

In advance,Thanks for your comments and support.

Jay

3681. CFA (Cross-Field-Antenna) co-inventor fights back

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-14 15:54:51 UTC
From: gene@eagle.csl.uiuc.edu
Message-ID: <gene.750614091@eagle.csl.uiuc.edu>
Source record: 274899

I thought the CFA (Cross-Field-Antenna) had been laid to rest as a hoax, or at least very inefficient as a radiator, after all the discussion it received after appearing in Electonic World- Wireless World magazine 2 or 3 years ago. Now it appears that one of the co-inventors is fighting back (Sept `93 EW + WW, p.747). According to the editor's note, he has offered some further data supporting its good performance, and refers to a paper in IEEE, Oct `90. He also invites anyone to visit their broadcast station in Egypt for a demonstration veryifying performance equal or better than the conventional 1/4 wavelength verticals normally used.
The author still seems to be highly secretive about additional clues to help experimenters get a model working properly...implying that it is quite a complex technique.
I actually built a small model a couple of years ago, and it did seem to work in principle (A very small pick-up loop indicated a vertically polarized pattern omni-directionally around it, and I had some very modest success working a few stations, but then you can also do that with very compact mobile-whips.
It would certainly be nice if some retired Professor with good credi-bility in the field of antennas (no pun intended) would take a vacation trip to Egypt (preferably one who here-to-fore has been skeptical) and accept the author's invitation to verify performance of the CFA antenna.

: Have you empiricaly observed this? I notice that I can easily detect AM
: transmissions without changing modes from the keyboard, is this perhaps what
: is happening to you and you are assuming it's in AM mode?...

Hmmm. We have an automated weather announcement service at the local
airport which transmits AM on 135.075 MHz. I have this in memory 38 on
my 530 which was bought in January 1993. It most definitely stores the
detector mode in this memory. Using the keystroke sequence to change
the mode when this memory is active causes "a3 off" to appear in the
display, and the audio almost disappears, although the S-meter still
indicates a signal present. Using the same key sequence on "normal"
memories with FM signals displays "a3 on" causes the audio to sound a
little off but still understandable. All I did to store the AM mode was
to set the mode to AM before storing the frequency in memory. I
don't remember seeing this specifically mentioned in the manual.

> modulation, so perhaps you can eliminate the noise by putting a better
> limiter in your receiver.
>

Not necessarily. When video and audio carriers are combined and then
amplified together, nonlinearity in the amp can cause incidental
phase modulation of the audio carrier, which usually shows up as
the "sync buzz" described by the initial poster. This buzz is FM,
so a better limiter will not help.

The difficulty of amplifying a combined audio/video signal without
creating incidental FM is why commercial TV stations use separate
amps for audio and video, combining the signals with cavities at the
antenna.

3684. Qeuestion on How to Obtain License

I would like to obtain a license to transmit in the 2-meter band. I am unfamiliar with FCC procedures. I have asked around a bit and found that I might want a technicians voice license.

What FCC test do I need to take?

What type of preparation material would be helpful?

How often are the tests offered?

What is the cost for the test and licensing?

Thanx in advance to anyone who can help me.

Commercial Radio Operator License Exams to be given at
Hosstraders Flea on October 16th

In a move similar to the well established Ham VEC system the
FCC has set up a system of Commercial Operator exams to be
administered by independent COLEM (commercial operator license
examination managers).

The MIT Radio Exam Team will conduct exams for the General
Radiotelephone Operators License and the Marine Radio Operators
Permit. The exams will be held at 1PM Saturday October 16 at the
Hosstraders Hamfest in Rochester NH. There is a $35 examination
fee. Bring the orginal and a copy of any commercial license you
want to claim credit for. Also bring 2 forms of picture ID, a
black pen and a pencil.

Copies of the question pool will be available for sale on Friday
and Saturday morning.

The General Radio Telephone Operators License is required to
service transmitters in the aviation, maritime and international
radio services. A Maritime Radio Operators Permit is required to
operate radiotelephone stations aboard large ships and certain
aviation and coast stations.

At a later date exams will be available for the Commercial Radio
Telegraph operators licenses and the Global Maritime Distress and
Safety Systems (GMDSS) licenses. Amateur Extra Class operators may
be particularly interested in obtaining a commercial telegraph
license as they will receive credit for the 20 WPM 2nd class code exam.

A regular schedule of exams is planned for Cambridge MA.

The MIT Radio Exam Team operates under the auspices of the
National Radio Examiners COLEM, part of the W5YI group.

Let me put in a plug for a handy invention of the MFJ folks, namely
their little antenna analyzers. The only thing they lack is a vernier
dial. You can buy the cheapie basic for under $80, or get one with a
frequency counter for under $200.

I used mine to tune my AEA Isoloop, instead of the miserable noise
bridge they try to make work. Since I have the cheapie, I simply
tuned the transceiver to the desired frequency and then listened
for the analyzer's signal in the receiver, while I tuned the analyzer.

The direct reading of SWR speeds tune-up, and you put out a miniscule
signal, compared to fiddling it around by hand.

If you intend to stay in ham radio, one of these gadgets is very much
worth-while.

However, you may find that you still do not get satisfactory results
working a 10m coax-fed dipole as essentially a random-length antenna
via a transmatch. TVI, rf feedback, and just plain poor performance
can all be the result of such an arrangement. If you're in an apartment,
your ground is very likely none-too-good, just adding to the mess.

The MFJ artificial ground helped, in my case. But it still wound up
that on certain bands, I had a house full of RF.

If you have the ability to put it up, consider something like an
Isoloop (or the MFJ equivalent). Unfortunately, the lower frequency
limit is 10 Mhz. However, you might be able to build a loop for

40 meters.

3687. Station address for sailboat/Internet access

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-14 18:45:25 UTC
From: tmicheal@feenix.metronet.com
Message-ID: <CEwHFp.5s4@feenix.metronet.com>
Source record: 274904

I will be taking the test for my first ham liscense this weekend and am wondering what i should use as the station address. My physical station will be on my sailboat that will be travelling around the planet. I do have a mailing address from which mail will be forwarded to wherever i happen to be at the time.

Being somewhat addicted to Usenet, i am desperate for a means of accessing the internet while i am out sailing and am hoping that this will be possible via packet radio. How can i get internet access using ham radio? Are there any publications i can read to learn about this aspect of ham radio?

Is it possible to get a "Universal" reciprical liscense for other countries or will i have to get one for each place i visit?

Thanks,

T. Micheal Young

In article <johng-081093164343@sce16.comm.mot.com> johng@ecs.comm.mot.com (John Gilbert) writes:
>Motorola doesn't have a problem with business radio equipment being used in
>the ham bands or with hardware field modifications to the equipment. The
>problem is people hacking software to turn on features which Motorola paid
>to write, but that the customer hasn't paid to use.

Then why did Motorola include those features in the radio that
was sold. Sounds to me its more a case of poor design than
any real violations.

By your logic, I could perhaps build
one hardware ram card for a PC that provided up to 10 meg of
ram and sell the cards as 10 different models (1meg to 10 meg
versions) where the only difference was in a software line of code
(or maybe a diode being in or out of the circuit) as to
how much ram was accessible for each version, despite the fact that
each version was, hardware wise, identivcal. You are then saying
that if it was discovered that anyone could gain access to the full
10 meg of ram by simply changing a line of code (or maybe snipping
a diode) that such act(s) would vioolate some law (copyright
or otherwise) because the user was getting additional capability
they hadn't paid for. Frankly I find that truly without merit.
If anything, I as the designer, manufacturer am probably guilty of
stupidity in think I could sell such a product without the end
user community ultimately discovering how to gain access to the
"hidden" memory. True, I didn't specifically sell
anyone that memory, but the fact that the end user/purchaser
bought the card with all the chips on it doesn't mean I'm
entitled to extra $$ because s/he discovered it was there and
found out how to access it.a Nor would I have any cause of action
against someone who was "selling" the details as to how to make
the modificiation to access that memory. It is NOT a theft of
anything.

>I have seen cases
>where the software interactions from having several features turned on that
>were never designed to be used together caused equipment or system
>problems.

That's the risk the radio owner takes when making any type of modification.
Bottom line responsibility for proper transmition according to FCC
rules rests with the person doing the transmitting, not with the radio.

> Not to mention that changing codeplug bits in a radio is a good
>way to wind up with a radio that will only power up and display the error

>"FAIL 01/82" (corrupt radio EEPROM).

ASs above, that's the chance anyone takes. Lot's of folks have trashed lot's of equipment doing so, but that's not Motorola's problem, nor should it be.

I play, modify, etc. with automobiles all the time. If any of my modification's don't get me the results I want, that's not the fault of the auto maker, that's my problem. Today, many "hot-rod" modifications involve remapping fuel injection electronics (software and firmware) yet I don't see Ford and GM screaming copyright violation at the people that do such modifications (or sell modified eproms, etc). And certainly not at the owners of their cars.

Standard Disclaimer- Any opinions, etc. are mine and NOT my employer's.

Ok, that makes sense - though I'm trying to remember how the PC box I use
does it. I recall that it modulates the driver and final - I don't
recall where the audio subcarrier is injected in. Probably downstream
though.
>
>The difficulty of amplifying a combined audio/video signal without

I thought it was so they could run each amp most efficiently (class c for
the audio FM) and save on power bills. It's probably a combination of
reasons, and it probably changes with the state of the art.

I know the VSB ATV transmitters have a problem when run through a power
amp - the amps are supposedly non-linear enough that when you get done
going through, you are pretty much back to DSB anyway. (sigh). I guess
tubes are better than transistors when it comes to that, but transistor
amps are more common right now.

Thanks for the interesting info.

Hmmm, a pack of cigs must have gotten smaller since I last saw one. I'm sure I've seen handhelds smaller than a pack of cigs before. A paramedic in town uses one....its a 2m radio, with the TX opened up for the Ambulance channels (158.76 and 159.45).....or was that the other way around?

: re "Break-Break"

: I remember that I once was involved in semi-serious traffic accident, and
: needed to use da patch to call the police. Recalling the arguements among
: my friends on the gang repeater, I clearly broke with "Break-Break". One
: of my friends came back with about five minutes of lecturing on the proper
: use of Break, Break-break, etc. As I sat there in the car, watching the
: snow float down over my crazed windshield, listening to his tirade, I had
: to think that maybe we could use some other eway of getting the message
: across in time of emergency. Maybe I should have tried to whistle the
: two-tone EBSsignal...If this had been an actual break...

: Steve WD8DAS

Hopefully you later at least had a chance to calibrate your friend...
If there is even a POSSIBILITY of an emergency situation, the first
response should be to LISTEN, not to lecture on protocol. On our
local repeater, I've heard one of the older operators answer a double
break with something like "break, break... go ahead with emergency
traffic". This serves to let the "breaker" know that (s)he has
the repeater, and that others who are waiting are standing by expecting
an emergency... it also lets others on the repeater know that they
should standby until the emergency can be handled (in case they don't
know the meaning of double-break.)

I think that double-break is used as a convention ENOUGH places for
emergency or priority traffic, that the first reaction on hearing this
should be to acknowledge and LISTEN... lives or property could be at
stake. Discussions of protocol can come later after the nature
of the traffic is ascertained.

I heard my wife do this once (she had to do it twice to get in), and
she was so flustered she couldn't remember the autopatch codes... so
she called ME. As it turned out, one of our club members works in the
local 911 dispatch center and monitors the local repeater betwen calls.
He actually was dispatching help as she was giving
me the details and he called me right away and told me he'd already
dispatched highway patrol and ambulance.

By the way, this is a great topic for discussion at ham radio club meetings.
If you can, get someone who dispatches 911 to come in and discuss how
best to use the service in an emergency. There are sometimes gotchas that

are not obvious... like the fact that in many areas, the 911 dispatcher gets a display of caller information which can be misleading if you are using an autopatch... for example, they may be seeing the address of the repeater site... and it can be in a different CITY even from the location of the emergency. In our case, the 911 call goes to a city police department... and they need to transfer the call to either the county or the Highway Patrol in many cases. I usually tell them I'm calling via radio from my car, what I'm reporting, and where I am... then let THEM ask the questions (they usually don't care about my callsign... but once I had one of them actually ask for it).

Probably enough rambling for now... back to the woodwork.

73s...

Bill

3696. Need % of hams vs. license class

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-14 20:24:17 UTC
From: rbloom@netcom.com
Message-ID: <rbloomCEwM0J.IKL@netcom.com>
Source record: 274920

I need to know Percentage of Technician-class licenses!

Or a rough estimate of those who are active only on VHF
and above!

Also:
Are there survey data showing how many hams prefer a given
HF band?

Regards,
Ron
WA6MQC

3697. Write to ARRL - was Motorola Ad in October QST

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-14 20:30:05 UTC
From: whs70@dancer.cc.bellcore.com
Message-ID: <1993Oct14.203005.24739@porthos.cc.bellcore.com>
Source record: 274921

Based on the commentary I'd seen in this newsgroup, I went back to my October QST to see what all the fury was about. After seeing the ad, I called Motorola (I suggest everyone else do that also) to complain. As the following letter to ARRL shows, Motorola has there own mindset on this issue, and I hope lot's of other ARRL members will write, call or email ARRL to ask for their analysis, etc.

----------begin copy of letter to ARRL----------

Mr. David Sumner, K1ZZ
ARRL President
225 Main Street
Newington, CT 06111

Dear David,

After reading the full page Motorola ad on page 161, Oct. 93 QST, I called their 800 number to find out what they specifically were talking about. The 800-325-4036 number gets you an attendant in Motorola's Security area who then connected me with one of their attorneys. I mentioned in a friendly way that I found the ad somewhat offensive on 2 counts: (1) that it was targeted at the ham community by virtue of it's being in QST and (2) that their was a significant lack of specificity in identifying what, exactly, Motorola was claiming to be a criminal act.

On my first point, the attorney stated it wasn't "only" targeted at hams as the ad was placed in other publications also. I told him that didn't matter as inclusion by Motorola in QST, a 100% amateur radio magazine certainly was targeted at hams regardless of any other ads in other publications. As to my second point, Motorola claims that ANY modification of Motorola's firmware or software, except as authorized by Motorola, is a violation of US Copyright and a criminal act. I debated that point by noting that as far as I understand, I as the owner of any individual piece of equipment/firmware/software (e.g. I purchase and thus own a copy of XYZ's Ham Radio Logging Software Package for my IBM clone or the software/firmware in a Radio Shack scanner), that I can modify that individual copy (my own copy) anyway I like. Motorola's attorney claims otherwise stating ANY modification to a copyrighted firmware/software package is a violation of copyright.

Based on my conversation with Motorola, I have two purposes in writing to ARRL headquarters:

(1) to ask that ARRL no longer accept advertising of this nature from Motorola or any other manufacturer

(2) that ARRL's legal staff present an article in a future issue of QST that discusses the legalities of INDIVIDUAL modifications to an equipment's software/firmware (see attached list of questions to be answered).

I'm concerned that if Motorola's contention is true, then modification articles in QST (i.e. How to modify a Motorola XYZ radio for 6 meter operation) that in any way rely on changing the manufacturer's software/firmware would be encouraging an illegal act on the part of the ARRL member doing such a modification. Use of modified commercial radio equipment by hams has always been an alternative and often less expensive source of amateur equipment than equipment made specifically for ham use. It seems Motorola wants to slam the door on such uses in the future. We can't ignore Motorola's claim, as most, if not all, current and future radio equipment utilize such software/firmware.

On this finer point of copyright law, Motorola claims we are breaking the law when we make such a modification, Motorola has thus accused all hams that have so modified any piece of equipment, be it a Motorola radio, a personal computer, a PC software package, a Radio Shack scanner, an automobiles electronic control unit, ad nauseam, of being law breakers. That's an unfair accusation. Frankly, as regards to what anyone does with an individual piece of software/firmware I don't believe there's any valid claim of copyright violation to change or modify it. If there was, then anytime I make marginalia notes in a copyrighted tech manual I'd be also violating copyright. Certainly I fully respect the intellectual property of others, but I see no enforceable right of any copyright owner (as distinguished from my ownership of one specific copy of a copyrighted work) that makes it illegal for me to alter my personally owned copy of any such copyrighted item.

As an aside, the Motorola attorney, when I disputed his claim as to individual modification of software being a copyright violation, he asked if I was an attorney. When I told him I wasn't, he suggested maybe I should think about going to law school before making my claim (i.e. before disagreeing with him). Frankly I find that at the minimum...arrogant and at worse...downright rude.

Respectfully,

Bill Sohl, K2UNK
ARRL Local Government Liaison, NNJ
29 Netcong Road
Budd Lake, NJ 07828

Home 201-691-8116

ATTACHMENT QUESTIONS:

Legal Questions on modifications to equipment/firmware/software.

What is the copyright legality of an individual ham making any of the following modifications to a piece of equipment owned by the ham:

1. Making a circuit change (i.e. to the wiring, to a printed circuit board, or a non software related component change, etc.) to the equipment to add, delete or change certain equipment functionality.

2. Making a component change where the component is a software related item (e.g. a processor chip, etc.) to add, delete or change certain equipment functionality.

3. Making a firmware change (presumably cutting or adding a diode to add, delete or change certain equipment functionality by utilizing/not utilizing part of the existing internal software.

4. Making a software change by adding, deleting or changing one or more lines of software code in the equipment's memory (EPROM, etc.) to add, delete or change certain equipment functionality.
----------end of letter to ARRL----------

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1993 Test Fee is $5.60.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121

3699. US License Examination Opportunities Scheduled 10/14/93 to 1/13/94

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-14 20:48:47 UTC
From: bjahnke@arrl.org
Message-ID: <6615@bjj>
Source record: 274786
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1993 Test Fee is $5.60.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., PO Box 273, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368; No phone

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1993 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

>
>Just out of interest, how deep does the RF current penetrate into the surface
>of the material? Is it a constant, or a function of current density, or
>frequency?

It's a function of frequency. At the frequencies of interest to us,
it's about 1 or 2 thousandths of an inch. That's why silver plating
works.

3701. Revised DX-Cluster Wish List

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-14 20:51:51 UTC
From: rc@cmr.ncsl.NIst.GOV
Message-ID: <9310142051.AA06961@cmr.ncsl.nist.gov>
Source record: 274914

A week or so ago OH2LWO asked for "wish-list" entries for revised DX-Cluster software.

I subsrcibed to the local cluster for a while, but dropped it for the following reason.... THE POSTINGS DON'T IDENTIFY THE POSTING STATION'S LOCATION.
As a 50 MHz and up type, knowing that W6XXX or K2NNN report a station doesn't help. The US non-geographical call-letter situation means that calls do NOT indicate station location. However, I discovered that the CURRENT DX-Cluster system DOES carry the identification of the NODE where the report was initiated. The problem is that THIS INFO IS STRIPPED OFF in the report you see as a logged-in user. It is only contained in the inter-node messages. It would be relatively easy for me - but I have been too lazy - to build a table of cluster nodes vs. grid squares for the eastern USA chain of DX-Cluster nodes. There are fewer than 100 nodes. What I'd like to see is a packaged way for this info to reach the ordinary DX-Cluster user.

SO.... let's have a way for the USER to see the Grid Square of node where each posting is initiated.

73 de w3otc@amsat.org

PS.. I reject the concept that I am supposed to know the location of all the stations who frequently post, there are MANY of them.

Yeah, you get 30 watts out and even 20 of those watts might be
on the desired transmit frequency!

3704. Smithsonian Station?

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-14 21:25:57 UTC
From: coolguy@cs.jhu.edu
Message-ID: <29kg55$dnu@blaze.cs.jhu.edu>
Source record: 274919

I will be in Washington this coming weekend and was wondering if anyone
had information about an active amateur radio station in the Smithsonian.
If I remember correctly, someone mentioned that there is one in the basement?
When does it operate?

Guy Shechter N5URI 4X1GS

3705. New UHF "Personal Use" Band?

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-14 21:48:23 UTC
From: kharker@bnr.ca
Message-ID: <29khf7$7fe@crchh941.bnr.ca>
Source record: 274925

I was in Radio Shack briefly the other day, and I noticed something
that surprised me. RS is now selling a UHF radio that operates in what
I presume is a new band. I forget the exact frequencies, but it is in
the 400's, right above or not too far above the amateur 440MHz band. None
of the sales droids knew anything about it (obviously) and all I could
gather from the box was that this new band is supposed to be for the
use of "personal and family communications" (the quotes were on the box,
too). The range quoted on the box was one mile. Other interesting
things were that the only legal mode of operation is voice, you have
to have a valid FCC license (application enclosed in box - I didn't
look at it) to operate, and, at least on the RS unit, there was just
a channel 1 / channel 2 toggle on the top for frequency selection. The
radio was $249 or something like that. I couldn't stay long in the store,
but this did catch my attention.
Does anyone know what this new band is all about? I mean, what's
the point? Doesn't this duplicate what the CB band is supposed to be
all about? If so, why would anyone want to pay four times as much for
a radio that probably has a significantly shorter range and only two
"channels"? Is it because you need to have a license? For those
family types who want to avoid the CBers?
This has me curious. If anyone knows what this new band is about
(or maybe it's just an old band I had never heard of before) I would
be real curious to know more about it.

Nonsense Bill. I once had a colleague get a bit uptight when I used the
old RTFM joke. He rather stuffily told me, "Around here we just say
RTM." To which I replied, "Why? What's wrong with Read The Fine Manual."

OK, you had to be there.

From: alanb@sr.hp.com
Message-ID: <CEwvF3.912@srgenprp.sr.hp.com>
Source record: 274923

Gene Gardner (gene@eagle.csl.uiuc.edu) wrote:

: I thought the CFA (Cross-Field-Antenna) had been laid to rest as a hoax, or
: at least very inefficient as a radiator, after all the discussion it
: received after appearing in Electonic World- Wireless World magazine 2 or
: 3 years ago. Now it appears that one of the co-inventors is fighting back
: (Sept `93 EW + WW, p.747). According to the editor's note, he has offered
: some further data supporting its good performance, and refers to a paper
: in IEEE, Oct `90. He also invites anyone to visit their broadcast station
: in Egypt for a demonstration veryifying performance equal or better than
: the conventional 1/4 wavelength verticals normally used.
: The author still seems to be highly secretive about additional clues
: to help experimenters get a model working properly...implying that it is
: quite a complex technique.

Always be skeptical about any revolutionary "invention" where the inventor
refuses to give full details. There is generally a reason for the secrecy,
and it rarely has to do with protecting trade secrets.

The cross-field antenna has this in common with many technical hoaxes:
many of the proponents forget the principle of conservation of energy.
If you feed 100 watts into an antenna, no more than 100 watts can be
radiated. With physically small antennas, you often get much less than
100 watts due to losses. Talking about Maxwell's equations and Poynting
vectors can't obscure that simple fact.

>the red wires. The problem is that I can hear stations on 440 that are
>actually on 145 MHz. Almost for every memory channel on 2m I can find a
>spot on 77cm that receives the same stuff.

Sounds like cross-band repeater mode is active. Make sure those loose
wires aren't exposed and shorting against anything.

> I also wonder if cutting the wires voids the waranty and thus I
>cannot send the unit back to ALINCO.

I doubt it since cutting one of the wires is detailed in the manual with
no mention of warranty problems. I've heard a lot of good things about
Alinco's service quality so if there's something wrong with the radio
they'll probably fix it without balking.

3716. HF & 2m prices used, mail order?

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-15 04:39:45 UTC
From: ceddlemon@tecvax.stim.tec.tn.us
Message-ID: <1993Oct14.223945.35@tecvax.stim.tec.tn.us>
Source record: 274828

Can anyone tell me the prices being asked (or reasonable offers) for HF XCVRs such as KENWOOD 430's, 440's.

Is an out of town purchase for a used rig risky? ie. Can you return a purchase ... is there any satisfaction guarantee ... restocking fee?

Any suggestions for what to look for in an used 2 MTR rig that would be suitable for packet? Not worried about hi-power ... or DX packet. I have a 10 year old ICOM 2AT ... but it just doesn't seem like a good choice to put into packet service.

If there is an FAQ posted somewhere for FTP that covers some of these questions please let me know. This node has not been up long enough to capture a good history of FAQ listings.

Charles, W4BIV ceddlemon@stim.tec.tn.us

Source record: 274839

Due to very severe storm winds, Roger's 160m vertical is now a folded
vertical and 160m has, therefore, come to an end.
It is possible that 80m operation will be very restricted also due to
antenna damage.
However, he is certainly making up for it on the other bands!

GL...73...Peter, G4BVH.

The following is a list of informational files for this newsgroup
available via anonymous FTP from ftp.cs.buffalo.edu (currently at IP
number 128.205.32.9) or the Australian mirror at grivel.une.edu.au
(currently at IP number 129.180.4.7).

Questions to bowen@cs.buffalo.edu

1750m.band - misc info on the 1750m band
222xvtr.zip - PostScript code for KH6CP no-tune 222-MHz transverter
ampr_coordinators - coordinators for packet IP addresses
antenna_refs - references for articles about antenna designs
arrl-logo.ps - ARRL logo in PostScript format
arrl_bib - bibliographies from ARRL literature (ASCII format)
arrl_digital_minutes - Minutes of the ARRL committee on digital comm.
arrl_fo_jobs - descriptions of some ARRL Field Organization jobs
arrl_info_service - announcement of the ARRLs trial information service
cal_pd_freq - California police frequencies
callbook.tar.Z - sources for the marvin callsign server v1.3
canadian.Z - Canadian ham database in FCC format
carpet.loop.2 - Antenna for apartments and small spaces
clubcalls.Z - database of US ham clubs
comb6.zip - HF Propagation Predication program
docket_91-36 - information regarding the proposed scanner regs
dxcc-k2di - ARRL DXCC country list
element_credit - rules about VE credit for earliers exams
elmers_admin - information about the elmers list (see below)
elmers_list - list of elmers on the network
exam_ops - info on exams and exam opportunities
faq_callsign - frequently asked questions about the callsign server
faq_ham_1 - frequently asked questions about ham radio (pts 1)
faq_ham_2 - frequently asked questions about ham radio (pts 2)
faq_ham_3 - frequently asked questions about ham radio (pts 3)
faq_packet - frequently asked questions about packet radio
faq_shortwave - frequently asked questions about shortwave
fft.com - EGA/VGA DOS command for spectral display (QST 1/92)
ffth.com - Hercules DOS command for spectral display (QST 1/92)
field_day_92 - field day rules for 1992
florida_antenna - Florida State antenna law info
guide2newsgroups - description of USENET newsgroups dedicated to radio
ham_sat_sum - summary of information needed to get on satellite
hams_on_usenet - list of ham operators and e-mail addresses on the net
```

hamstacks - information about the question pool stacks
handicap_waiver - info on obtaining a handicapped test waiver
hf_rigs - QST reviews of available HF rigs
ht_info - general information about commercial hand helds
icom_ic_w21at_mods - increases the number of bands on an Icom IC W21AT
intro_to_swl - info for aspiring short wave listeners
intro_to_scanners - info for aspiring scanner listeners
jlem.zip - Program, w/source, for 2kx8 ROM emulator (QEX 1/93)
j-poles - description of j-pole antenna made from twin-lead
lead_acid_batteries - essay on lead-acid batteries
license_plates - guide to ham calls on license plates
logos - PostScript logos for various ham organizations
mail_order - a database of electronic mail order shops
manufacturers - names and addresses of ham gear manufacturers
mav11.ps - postscript image of MAV-11 amplifier PCB (QEX 9/93)
motorola_ge_service_man - how to get service manuals for Motorola and GE rigs
nasa_select - places where you can hear NASA SELECT broadcasts
new_packeteers - helpful essays for new packeteers
newcomers - tips and hints for those new to amateur radio
nprm_93_85_text - text of docket 93-85 (message forwarding systems)
packet_clubs - organizations you can get more packet info from
packet_gateways - list of gateways from packet to Internet
packet_misc - miscellaneous packet info
packet_software - list of packet software versions
phone_bbs_list - phone BBSs for ham related issues/software
pio_handbook - ARRL Public Information Officer's Handbook
pr_docket_92-136 - text of FCC PR Docket 92-136
qsl_bureau1 - information about the ARRL QSL bureau
qsl_bureau2 - "what should I do if" list for the QSL bureau
qst_prodrev - index of ARRL product reviews in QST
quest_pool_novice - novice question pool - good after 7/1/93
quest_pool_technician - technician question pool - good after 7/1/93
quest_pool_general - general question pool - good before 6/30/94
quest_pool_advanced - advanced question pool - good before 6/30/95
quest_pool_extra - extra question pool - good before 6/30/96
repeater_map_proj - description of Electronic Repeater Mapping Project
rfi_tips - good posting about RFI
sol_geo_data - desciption of daily solar geophysical broadcasts
sol_terra_terms - glossary of solar-terrestrial terms
sstv_wefax_info - general help for SSTV and WEFAX users
tasm.zip - table-driven assembler for weavrdsp.zip file
usenet_purchases - tips on buying and selling via USENET
weavrdsp.zip - src to "Weaver Method Modulator Using DSP" (QEX 9/93)

For readers of this newsgroup both new and experienced, these files are a de-facto "Required Reading List" to provide definitive answers and pointers to other sources for questions that come up in this forum.

This is also your archive, so any additional articles, guides, or small PostScript graphics that you feel would enhance this collection are most welcome. Submit to Devon via his E-mail address above.

Thanks go to Devon Bowen, KA2NRC, for providing diskspace and maintaining these valuable archives, as well as all the authors who wrote and submitted the information contained in them.

Additional archives out there that have /pub/ham-radio directories are encouraged to "mirror" these files to provide redundant storage for these documents. Some of these sites (which may or may not mirror ftp.cs.buffalo.edu) include:

Changes: new mailing lists, .packet rmgroup, and .policy updates

(Note: The following is reprinted with the permission of the author.)

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info,
and rec.radio.swap newsgroups. It is intended to serve as a guide for the new
reader on what to find where. Questions and comments may be directed to the
author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@oac.hsc.uth.tmc.edu. This message was last changed on 18 September
1993 to add the mailing lists for the new rec.radio.amateur newsgroups, to
note the rmgroup of rec.radio.amateur.packet, and to officially retire some
(in)famous threads of discussion on rec.radio.amateur.policy.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

As the net grew, and as packet radio came into vogue, packet discussion began
to dominate other topics in the group and on the list. This resulted in the
logical solution: a group was created to hold the packet discussion, and
another corresponding mailing list was created as well: net.ham-radio.packet
and PACKET-RADIO, respectively.

These two groups served for several years, and went through Usenet's Great
Renaming essentially unchanged, moving from net.ham-radio[.packet] to
rec.ham-radio[.packet]. Readership and volume grew with the rest of the
network.

The INFO-HAMS mailing list was originally run from a US Army computer at
White Sands Missile Range, SIMTEL20. There were few problems with this
arrangement, but one was that the system was not supposed to be used for
commercial purposes. Since one of hams' favorite pastimes is swapping
gear, it was natural for hams to post messages about equipment for sale
to INFO-HAMS/rec.ham-radio. This ran afoul of SIMTEL20's no-commercial-use
restriction, and after some argument, a group was created specifically
```

for messages like that: rec.ham-radio.swap. This group wasn't gatewayed to a mailing list, thus avoiding problems.

While all this was happening, other folks wanted to discuss other aspects of the world of radio than the personal communications services. Those folks created the rec.radio.shortwave and rec.radio.noncomm newsgroups, and established the precedent of the rec.radio.* hierarchy, which in turn reflected Usenet's overall trend toward a hierarchical name structure.

The debate between proponents of a no-code ham radio license and its opponents grew fierce and voluminous in late 1989 and 1990. Eventually, both sides grew weary of the debate, and those who had not been involved even more so. A proposal for a newsgroup dedicated to licensing issues failed. A later proposal was made for a group that would cover the many recurring legal issues discussions. During discussion of the latter proposal, it became clear that it would be desirable to fit the ham radio groups under the rec.radio.* hierarchy. A full-blown reorganization was passed by Usenet voters in January 1991, leading to the overall structure we now use.

After the reorganization, more and more regular information postings began to appear, and were spread out across the various groups in rec.radio.*. Taking the successful example of the news.answers group, where informational postings from across the net are sent, the group rec.radio.info was created in December, 1992, with Mark Salyzyn, VE6MGS, initially serving as moderator.

In January, 1993, many users started complaining about the volume in rec.radio.amateur.misc. This led to a discussion about a second reorganization, which sparked the creation of a mailing list by Ian Kluft, KD6EUI. This list, which was eventually joined by many of the most prolific posters to the ham radio groups, came up with a proposal to add 11 groups to the rec.radio.amateur hierarchy in April 1993. The subsequent vote, held in May and early June, approved the creation of five groups: rec.radio.amateur.digital.misc (to replace .packet), .equipment, .homebrew, .antenna, and .space.

The Current Groups

I can hear you asking, "OK, so this is all neat history, but what does it have to do with me now?" The answer is that the history of each group has a direct bearing on what the group is used for, and what's considered appropriate where.

The easy one is rec.radio.amateur.misc. It is what rec.ham-radio was renamed to during the reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize

this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, should be removed by September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is now rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there.

The first reorganization added two groups to the list, one of which is rec.radio.amateur.policy. This group was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The other added group is rec.radio.cb. This is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently Mark Salyzyn, VE6MGS. The email address for submissions to the group is rec-radio-info@ve6mgs.ampr.ab.ca. Inquires and other administrivia should be directed to rec-radio-request@ve6mgs.ampr.ab.ca. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas,

commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

A Few Words on Crossposting
===========================

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Date: 1993-10-15 11:43:00 UTC
From: R.G.Harris@sheffield-hallam.ac.UK
Message-ID: <2CBE8CFC@cerberus.shu.ac.uk>
Source record: 274853

I am doing some work on Direct Digital Synthesis (DDS) and am looking for suitable D to A converters to put on the end of one of the proprietry chips that does DDS.

I have got an article that refers to DACs made by various manufacturers. The problem is I do not have any addresses or fax numbers for them. Can anyone provide me with them or tell me where to look? US or UK numbers or addresses are ok for me.

I need numbers etc for

TRW (for the TDC1012 12 bit DAC)
Tektronix (for the TKD A30 12 bit DAC)
Sony (for the CX20202A 10 bit DAC)

I (and the student working on this) will be grateful for all offers

Thanks

Bob G4APV

Great! Thanks. But, what about tones A-D?

If no other option appears, then this is what I'll do and I'll let A-D go.
But, it would be nice to have them.

Let me recomend that you buy the NCD-42. It's a bit expensive, but it's
a "smart charger" that is very kind to NiCads. The old NCD-29 is very
abusive of batteries.

Ed, this is a very good idea. I suggest that the ARRL use that suggestion in the next repeater directory.

My club, in it's Members Operating Guide, specifies BREAK BREAK for Emergency use and MAYDAY or BREAK BREAK BREAK for life threatening emergencies. Although those suggestions might be useful, BREAK for EMERGENCY certainly conveys the message clearer.

Great, and the ARRL can continue in the fine tradition of maintaining it's
reputation of being 50 years behind socially as well as technologically.

Well since such a small percentage of the total cluster spots are 6 meter,
why not just make a policy that you include the location in the comment
section of the spot? Like QSX or QSL via xxxxxx.

I just called up Smithsonian Information, and here's the low down:

Open from 10am-3pm, Tuesday through Friday. It's in the Information
Age Exhibit in the American History Museum, at 14th street NW and Constitution
Avenue. If you wish to operate the station, they request that you call
a day ahead, if possible. The guarantees your chance of getting to work
the station. If you don't call, there's a chance 50/50 chance that you'll
get to work it. At any rate, bring a copy of your license.

The number for the Dept. of Electricity is 202-357-1840, and for the Ham
Station, it's 202-357-3040. Again, 10am-3pm is when they'll be there to
answer the phones.

> back up and the SWR skyrockets...lower the SWR, power plummets....ARGH!
> Help!!!! Anyone...I really need a close, personnal friend who is a ham...

Connect the HW-101 to a dummy load. Tune for maximum smoke like usual. Now back off on the loading control to decrease the output into the load. Drop the load power to about 20 watts instead of the 75-100 or so the rig should be able to do when peaked up all the way.

Then attach the tuner, and fiddle around with the tuner and the 10 meter antenna. (don't readjust the HW-101).

What is happening is at max output on the HW-101 with a really variable load (the tuner) it is affecting the plate tuning of the finals.

With the output lightly loaded, the interaction b etween the plate tuning and the tuner is minimized.

Once you get the antenna tuned up properly, increase the HW-101 loading, and retune the plate. (Leave the tuner alone at this point)

This will be a bit messy tuning things up, but you can get on the air.

I read several opinions that the 902-928 MHz band is under-utilized.

I would like to experiment with the band. There is even a local
repeater. However, most commercial ham gear is for 2m/440 with
some 220 and 1240.

Does anyone in net.land know the latest and greatest commericial
off the shelf transceivers with 902-928 Mhz coverage?

>(or maybe it's just an old band I had never heard of before) I would
>be real curious to know more about it.

There is no new band. It is probably a radio set for one of the handful
of personal radio service channels (there are some in VHF and some in
UHF) that is set aside by the FCC for family use.

Here in Manhattan if you set a scanner to the PRS channels, you will
pick up all sorts of stuff that does not sound like family members
talking to each other. Most of it sounds like taxi dispatching. I
expect a family would not get much use of of the radios you saw, here in
Manhattan.

I would rather see the family members get ham tech licenses and
communicate in a more knowledgeable way.

>to help experimenters get a model working properly...implying that it is
>quite a complex technique.

If this is who I think it is (Dr Ken Corum), then the secretive nature may be due to Government contracts. He is a coworker of mine in Chelmsford Mass. He and his brother designed a cross field antenna for a Navy contract for VLF work. The antennas are in use, and they have reserved the rights for MF/HF broadcast work.

They are also working on other US Gvt contracts that he could not discuss. He did have lots of neat pictures of ball lightning they are generating as a side effect of their work. Go figure.

These guys are hard core magnetic mode antenna physics types. Nearly all RF antenna theory I have ever seen is E field oriented, so I am not surprised that we (collectively) do not understand their work.

BTW- with regard to conservation of energy, Most VLF and even MF/HF antennas are inefficient. Why is it hard to believe that someone could build a more efficient design? I discussed an 80m version with him, and I was looking at a 20m ring 2-3m high. Not exactly more convenient than Butternut verticle, but if it gave performance comparable to a 1/4 wave monopole, with less ground losses, it would be worthwhile.

Personally, if we are referring to Dr. Ken (As he is known by his coworkers), I believe him.

* MIR OPERATING HINTS *
=======================
This Week: Automated calling programs for packet radio communications

Several people have asked me what are the best programs to use that will automatically call Mir and the Shuttle while I am not at my station. My first response is: Are you that lazy? But really these program should be called Automatic QRMing Programs, because that is what they do best. You should NEVER use an Automatic QRM program to call Mir or the Space Shuttle. I have yet to see one of these programs that is smart enough to shut-up and not cause QRM. (In theory it is possible to develop an automatic calling program that would generate minimum QRM.)

On October 3, 1993, a station in New York left his Automatic QRMing program running all day while the operator was away. The result was that no one East of the Mississippi was able to reliably transfer any data to Mir for the whole day. This was because the Mir PBBS was too busy sending <<DM>> (DM-Disconnect mode) frames to the New York station. I counted over 120 DM messages to just this one station in one day.

What are the legalities of using such a program, since the Mir PBBS can only connect to one station at a time? Any station with excessive connect attempts while the PBBS is connected to someone else, is causing Intentional Interference and may be subject to FCC fines. The bottom line is be courteous to other operators and never use an Automated Packet calling program for Mir or the Space Shuttle.

Remember, only one station can connect to Mir's PBBS at a time. All others must wait.

[Story by G. Miles Mann, WF1F]

* FO-20 OPERATING SCHEDULE *
============================

Fuji-OSCAR-20's operating schedule for the rest of the month is as follows:

Analog (Mode JA):
20-Oct-93 08:12 UTC -to- 21-Oct-93 08:31 UTC
27-Oct-93 08:36 UTC -to- 28-Oct-93 08:55 UTC

Digital (Mode JD):
Unless otherwise noted above.

[Info via Gianni, IT9UJY]

* BIDs FOR PACSAT *
==========
Recently some bulletins without packet radio Bulletin-IDs ($BIDs) were uploaded to UO22/KO23 and were later found on terrestrial BBSs from several different ground stations with different $BIDs. These $BIDs were automatically created by the BBS since each file was uploaded without a specific bulletin ID. In order to remedy the situation, it has been suggested that a bulletin ID consisting of:

"<message number>_underscore_<satellite designation>"

be used as an 100% unequivocal Bulletin-ID (including the SAT ID), but ONLY if there is NO original $BID specified in the bulletin.

If a bulletin becomes message "b92f" (File b92f.msg) on UO22, then the $BID "$b92f_uo22" should be used for those transferring message "b92f" to their terrestrial packet radio BBS. A file from KO23 may get message number "$1234_ko23" and a file on AO16 may get message number "$9a2e_ao16" as its bulletin ID.

Using this convention will reduce unnecessary terrestrial packet radio bulletin duplication and network contention.

[Info via Peter, DB2OS @ DB0FAU.DEU.EU]

* LUSAT SOFTWARE RE-LOAD *
==========
LUSAT-OSCAR-19 has been working for nearly two years without interruptions or a reload of the OBC software. On 11-Oct-93, satellite controller LU8DYF unloaded the old (but very reliable) BBS software (FTL0). The bird was sending telemetry every 30 seconds on the secondary transmitter frequency of 437.125 MHz. All the systems are working well. Reload of the latest FTL0 Pacsat file server software should be complete.

When LO-19 software uploads take place, it is important not to transmit on any of the satellite's uplink channels when the bird is over Argentina, as this slows down the reload process.

[Info via Norberto, LU8DYF]

* DOUBLE-HOP COMMUNICATIONS *
==========
Gordy, WB6OVH, has been making some cross-satellite contacts using AO-13

and RS-10. Gordy adjusted his uplink on AO-13 to produce a downlink of 145.885 MHz through the Mode B transponder. This frequency falls in the middle to RS-10's Mode A uplink passband. Walter, KA6VNU, contacted Gordy through RS-10 on a downlink frequency of 29.380 MHz.

Both stations had a lot of fun making the contact, and reminded both of the excitement of their first satellite contacts. The QSO which took place on 12-Oct-93 lasted about 8 minutes and just shows there is still fun to be had using the older amateur satellites.

[Info via WB6OVH]

No one has been arguing what you do for yourself....

Those that think they can modify the software, then make a living from that,
is where the real contention is and that is the point I have been trying to get at.

If you do modify a radio for your own personal use is fine, BUT:

1) This is risky, because messing with the radio's "code" could leave it unusable,
should even the slightest mistake be made.

2) Modifications void any warranty, although stuff the hams get is generally
used and has no warranty anyway.

This is the General Mobile Radio Service, or GMRS.
I believe there are 8 repeater pairs and some simplex
channels around 462 MHz. No, it does not duplicate the cb band, although there
are some similarities. For one thing, the comms are fm and therefore much
higher quality than 27 MHz am, and for another, because of the freq there
is no dxing or skip interference. The rules are rather complex and are
designed to provide a true personal comm service that seems to have many of
the good parts of ham radio with few or none of the bad parts of cb. I've
listened on my scanner, and here in the western Chicago suburbs, it's hard
to tell GMRS from ham radio in terms of technical quality and radio
etiquette. It appears to me to be a very good way for family members to
communicate by radio without taking a license exam...as opposed to cb,
which appears to me to be a very bad way for family members to communicate
by radio without taking a license exam.

Kenneth E. Harker (kharker@bnr.ca) wrote:

: I was in Radio Shack briefly the other day, and I noticed something
: that surprised me. RS is now selling a UHF radio that operates in what
: I presume is a new band.

Well... not too new. It's a GMRS (General Mobile Radio Service rig.)
: I forget the exact frequencies, but it is in
: the 400's, right above or not too far above the amateur 440MHz band. None
: of the sales droids knew anything about it (obviously) and all I could
: gather from the box was that this new band is supposed to be for the
: use of "personal and family communications" (the quotes were on the box,
: too).

Exactly right.

The range quoted on the box was one mile. Other interesting
: things were that the only legal mode of operation is voice, you have
: to have a valid FCC license (application enclosed in box - I didn't
: look at it) to operate, and, at least on the RS unit, there was just
: a channel 1 / channel 2 toggle on the top for frequency selection. The
: radio was $249 or something like that. I couldn't stay long in the store,
: but this did catch my attention.

Also correct. I honestly don't know the rational, because as you
noted, it's possible to get a CB handheld for $50.00 without paying a
license fee.

|> Here is another posting I saved regarding storing the AM mode:
|>

< details deleted >

|>
|> I hope this helps.
|> hlb@li.loral.com

Yes it does. Consensus is that the FT-530 DOES store the receive mode (AM or FM) when the frequency is stored in a memory. Then, on scanning, the receiver uses the stored mode when it scans the channel. This is not described in the user manual. Thanks to all for their input.

And now another question for those with the luxury of a power output meter: I recently purchased the _filtered_ 12V power cord for the FT530 and have experienced about a 2 volt drop across the cord circuitry (this is identified in the specs and on looking inside the power cord head, I found some discrete devices including a voltage regulator /transistor on a heatsink). My question is: how does this affect my power output? In other words, what are the FT530 (high) power output levels at the following supply voltages: 10.0V, 12.0V, 13.8V ???

Should I consider adding a "filter bypass switch" in the power cord for situations where tx/rx is marginal?

Not to mention the company that used to be up in New England that you could send the "brain" from your Bosch Feul Injection to and they would send it back modified for higher performance. I never heard about Bosch (or Volkswagen, or even Porsche) sueing them for modifying the programming. Or maybe you thought that 4 cylindar, Porsche 914 (built in a Karmen Ghia factory) came from the factory able to outrun all those Detroit V-8's I used to pass??

Message-ID: <msanders-151093101920@msanders.sim.es.com>
Source record: 274851

I have purchased one HamCall CD-ROM and am interested in any others that may be available. The data on them may be the same, depending upon their update times for new licensees, but pricing will be different and additional features will vary. I have heard of one called "SAM", and I purchased the Buckmaster CD. Buckmaster has about 6000 shareware programs on it in addition to most of the US callsigns and another host of international call signs. Buckmaster is $50 plus shipping and updates in April and October. Any other information on the different CD-ROMs would be appreciated.

Thanks,
Milt

>
>Gary, you are part of the 99% of the hams who don't understand.

I could be cruel and say there's a reason you're in the 1%, they're right and you're wrong. But I suspect most of them don't know why they're right.

>At the end of the chapter on transmission lines in the ARRL Handbook
>is a chart that shows the transmission line losses given the SWR at
>the transmitter and the SWR AT THE ANTENNA. Your above "solution"
>is just one of the possibilities. That chart in the Handbook indicates
>that the range of possible losses in the transmission line with an
>SWR of 1.6/1 at the transmitter is 2db to 6db corresponding to SWRs
>of 2.3/1 up to 100/1 and higher AT THE ANTENNA and you cannot tell the
>difference by SWR measurements at the transmitter end.

I don't know what edition of the Handbook you're consulting, but the chart in *my* 1992 Handbook, figure 25 page 16-15, only gives one solution for a given input SWR and a given matched line loss. The equations from which it is derived are given in The ARRL Antenna Book, fifteenth edition, as equations 12, 13, 14, and 15 on page 24-14. Equation 12 is the one of interest to your complaint. It is

Sl=(A+B)/(A-B) where Sl is the load end SWR and A and B are defined below

A=(Si+1)/(Si-1) where Si is the input end SWR

B=10^Lm/10 where Lm is the coax line loss *if it were matched*, IE the common table loss figure.

So as you can see, the load end SWR can be completely and uniquely determined by knowing the input end SWR and the matched line loss which you can either pre-measure, or look up in a table.

The reason using the matched line loss figure is valid was illustrated by my example calculation in my previous message. The matched line loss is what's seen by the reflected wave looking back into the 50 ohm source. And it's the loss seen by the incident wave prior to

hitting the reflection point. The total line loss, matched and
due to SWR, is given by equation 14.

Lt=10log(B^2(A^2-1))/(A^2-B^2)

Note that only components of input end SWR and matched line loss
are needed to obtain total loss. That's because load end SWR is
uniquely defined by those same components.

Actually, this problem extends to the lower bands as well. As spots are now coming from users in PA and beyond on the New England cluster, many spots are meaningless (i.e. I'm in the skip zone).

Not only would it be worthwhile having grid locator or other location identifier, it would be useful to have the filtering mechanism enhanced to work with this locator information.

3750. re - first SOS in history

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-15 19:06:51 UTC
From: weh@hume.super.org
Message-ID: <1993Oct15.190651.15785@super.org>
Source record: 274740

A while ago I posted two questions. Thanks very much to all 8
people who responded. Here is a synthesis of the answers.

1 - what ship sent the first sos signal?

The Titanic which sunk in 1912. Also,
the first wireless act was passed in 1912 (I think) requiring ships
at sea to carry radios and monitor them (the Titanic's sinking may
have had something to do with this).

2 - what signal was used for distress before the sos signal?

CQD

Prior to 1912, the SOS signal was not used. It was only agreed
to as a signal about 1911 or the early part of 1912, whenever the
international convention was (1912, I think). Prior to that time
the standard distress signal in use was CQD literally for
``general call to all stations --- distress'' hence the CQ followed
by the D.

History has it that the first "SOS" as such was
sent from the HMS Titanic on a cold April night
in 1912. The radio operator was using the then
standard "CQD" without a response. The chief
operator then suggested they try the recently
agreed upon "SOS" instead. The rest is history.

3751. Grounding success!!

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-15 19:23:35 UTC
From: watson@wink.corp.sgi.com
Message-ID: <WATSON.93Oct15112335@wink.corp.sgi.com>
Source record: 274865

I sent the following as private mail to someone, but I thought it might be interesting, so:

Since I got my ticket a few weeks ago, the one real surprise I've had is that my 30-foot-plus ground wire seems to work just fine, despite the advice in all the books that says "keep your ground wire short -- hopefully shorter than 1/4 wave at your operating frequency". My shack is on the second floor, and the ground wire runs down to the crawlspace under the first floor, and then 20 feet or so horizontally out to a single ground stake near an external wall. There's no spurious RF evident in my shack or my signal and the signal has really been getting out fine -- I've made contacts on several different bands that others near me, with apparently superior antennas and more power, have failed to make. (I tune my very narrowband shortened multiband dipole with the help of a Palomar tuner-tuner. Without that, I would probably go crazy. The antenna has a bandwidth of only 37KHz on 80 meters, for example, and tuning it is very peaky on the low bands.)

I even went so far as to buy a used MFJ artificial ground before my ticket came, now to learn to my surprise that it is completely unnecessary.

Perhaps one reason why my not-by-the-book ground seems to be so effective is that I was careful about inductance. I use 12" of RG-8 shield braid from the transmitter to a solid copper grounding bus under my (wooden) table, and the long run from that to the ground stake is a very heavy 2-0 gauge welding cable -- hundreds of tiny strands of copper in a bundle about 1/2" or more in diameter.

I wondered if this was overkill, but I have no reason to go through the effort of finding that out! I'm admit, I'm sometimes tempted to disconnect the ground and key the transmitter, but I haven't summoned enough courage or craziness to do that yet.

Comments?

>here?

Note that taking measurements with the instruments in the near field
can yield misleading results. Your friends the Smith Chart and the
coax loss tables can give you accurate results with any random length
of feedline.

Gary

Well, actually I took graphs both at the end of my coax feed in my shack and
at the end of an 8' coax in my attic where the antenna is located.

I wanted to calibrate the result in the attic so I could do useful tuning
without running downstairs to read the SWR after each change.

I found that the frequency of least SWR shifted about 50KHz on most
bands -- I can't remember which direction -- and that in the shack,
the bandwidth was quite a bit greater!!??

Sorry, I won't be publishing the graphs; I have no connection between
the HF analyst and a computer, and it would take a *long* time to enter
them by hand. I'm even skeptical about the benefit to anyone of my exact
readings. My main point was that the HF analyst and the W9INN antenna are
both working very well for me.

Thanks & 73,
-David.

>identifier, it would be useful to have the filtering mechanism enhanced
>to work with this locator information.

I had been wondering for some time whether or not getting a DX spot
from a station in Florida is particularly meaningful, if conditions
are such that I don't have a chance of hearing the station being
posted. It is arguable that in the case of DX-peditions, it's nice
to know when stations are on the air, on what frequencies and what
bands when, and one might be able to anticipate when one's turn
will come.

However, I would like to add another way that the broader cluster
spots have been REALLY helpful to me. I have several very dear ham friends in
Bosnia, and you can imagine that I am worried sick about them.
Whenever I see one of them spotted on the cluster, even if I can't
hear them to work them myself, at least I know that they've been
active on the air recently. It is a big comfort to me, since
because of bad luck (I never seem to be home when they finally
have electricity to get on the air and there's propagation between
us) we haven't spoken on the radio since June. In addition, I know
that if I have some important information and I can't work them from
here, perhaps I can ask a ham elsewhere to pass the message for me.
I've also gotten several messages from W2 stations via the cluster
telling me that they've spoken to one of my friends, and passing me the
message that everyone is OK.

I know this is not the main purpose of a DX-cluster, but believe
me I appreciate it more than I can say.

> >Eric Koester, KA0YWN

Astatic also makes a different-looking head that fits the same base that
the D-104 head fits. The other head (can't recall the model) is
supposedly optimized for frequency response for SSB use. I have
received many glowing reports on the quality of my audio using this head
and the pre-amp base into my Drake TR-7.

Just a question? Howzabout those walkie talkies you see contractors using
on a jobsite. Do these fall in the same or different channel??

3761. COMMENT ON AMSAT KEPS

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-15 20:36:00 UTC
From: ray.hoad@drig.COM
Message-ID: <56.2201.99.0C389969@drig.com>
Source record: 274874

Due to a problem with line limits in my INTERNET access BBS, I could not
send all the AMSAT keps as one message/file. Sorry for inconvenience.
I hope to resolve problem soon.

3762. Re: Homonauseated (Was: Newsline #842)

Actually, if vomit causes him to be nauseated, then he must be in a perpetual
state of vomiting.

(hint: look up nausea vs. nauseated in the dictionary)

3763. Re: Write to ARRL - was Motorola Ad in October QST

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-15 20:53:31 UTC
From: stai@oem13.dt.wdc.com
Message-ID: <stai.750718263@oem13>
Source record: 274872

PC magazines often print articles that describe patches that users can make to commercial programs. One popular patch several years ago described how to change the colors used by Lotus 123. I can't imagine Lotus passing up an opportunity to litigate with someone....;-)

DEFINITIONS:

Date (day only)
10.7 cm SOLaR radio FLuX forecast
HF Propagation Conditions for LOw, MIddle, HIgh, and POlar areas (see below)
HF Short Wave Fade Probability (in %)
HF Maximum Usable Frequency in +/- percent above seasonal normals.
HF Prediction CONfidence Level (in %)
VHF Sudden Ionospheric ENHancement Probs (in %), weighted for low-mid lats
PROBability of "s"poradic E (Es) during the UT day for low, mid and high lats
VHF AUroral BacKScatteR Probs (in %) for LOw, MIddle and HIgh Latitudes
VHF Overall Global DX Potential (in %) - weighted for Low and Middle latitudes
Geomagnetic Activity Kp Index (peak value - see below)
GeoMAGnetic Activity Ap Index (peak value - see below)
AURORAl Activity for LOw, MIddle and HIgh Latitudes (see below)

HF Prop. Quality rated as: EG=Extremely Good, VG=Very Good, G=Good, F=Fair,
P=Poor, VP=Very Poor, EP=Extremely Poor.
```

Probability of Sporadic E (Es) for the various latitudes is given in percent.
Kp Planetary Index rated: 0=V.Quiet, 1=Quiet, 2=Unstld, 3=Active, 4=V.Active,
5=Minor Storm, 6=Major Storm, 7=Maj-Sev Storm, 8=Severe Storm, 9=V.Severe.
Ap Planetary Index rated: 0-7=Quiet, 8-16=Unstld, 17-29=Active,
30-49=Minor Storm, 50-99=Major Storm, Severe Storm >=100.
Auroral Activity rated: NV=Not Visible, LO=Low, MO=Moderate, HI=High,
VH=Very High.

PEAK PLANETARY 10-DAY GEOMAGNETIC ACTIVITY OUTLOOK (15 OCT - 24 OCT)

| Conditions | Given in 8-hour UT intervals | Intensity |
|_____________________________________________________________________________|
```

CONFIDENCE LEVEL: 70%

NOTES:
Predicted geomagnetic activity is based heavily on recurrent
phenomena. Transient energetic solar events cannot be predicted reliably over
periods in excess of several days. Hence, there may be some deviations from
the predictions due to the unpredictable transient solar component.

Chart Start Date: Day #228
```

NOTES:
This graph is determined by plotting the greater of either the planetary A-index or the Boulder A-index. Graph lines are labelled according to the severity of the activity which occurred on each day. The left-hand column represents the associated A-Index for that day.
Q = Quiet, U = Unsettled, A = Active, M = Minor Storm,
J = Major Storm, and S = Severe Storm.

```

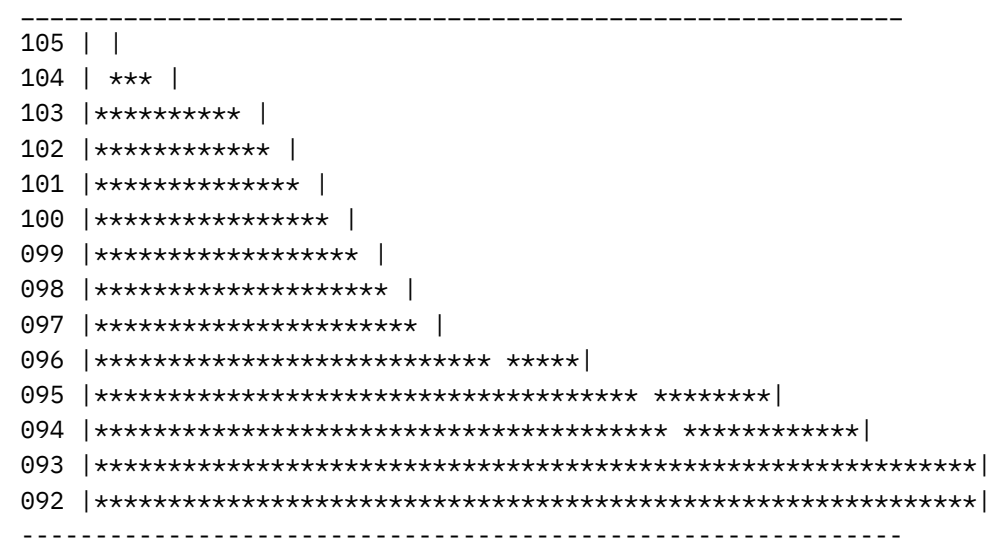
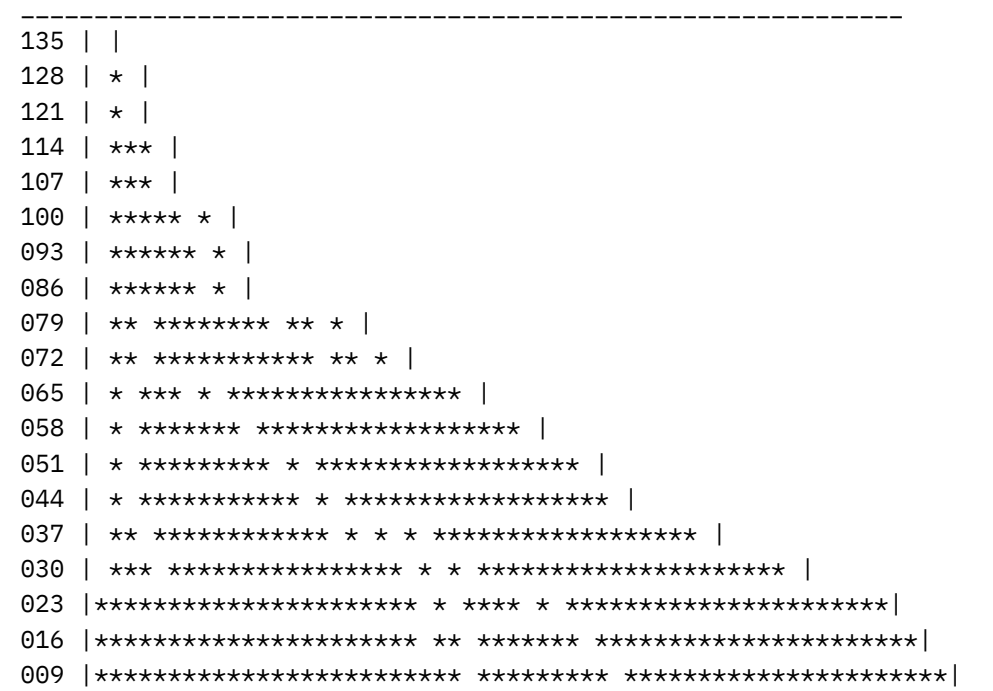
GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX



NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

CUMULATIVE GRAPHICAL CHART OF SUNSPOT NUMBERS



```

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts.

|> When does it operate?

I don't know if it is set up, but FWIW, the first ham I really knew willed his ham station to the Smithsonian. He had gotten his ham ticket just about WW I, and had a great deal of ancient gear, QSTs back into the early '20s, etc. He also had a full Collins S-line. (The first QSO I ever made was using that S-line as his guest op!)

Since he became a SK several years ago, that station is certainly in the Smithsonian collection somewhere.

(BTW, If anyone has an old call book - say pre-1975, I'd love to know what Frank Wingard's call was. W9?? in Rock Island, Illinois.)

As if excluding ads from a gay radio amateur group in an amateur radio magazine does NOT reflect a political/social position? Come on.

If gay radio clubs or nets want to exist, does anyone have to patronize them? No. Just go on to the next ad, or turn the dial. Or if you would rather stick around and be disgusted, I guess that's your privilege too.

I can think of a lot of possible nets I wouldn't want to join, but if enough hams want to have (for instance) a wifeswappers' net, let them, as long as they can keep the language clean. Heck, the QSOs would probably sound about the same anyway--how big is your rig, how many contacts have you made, have you worked all states, etc. etc. etc.

Oh, yes, ball lightning. Shades of the Tesla society!
They built a 100 foot diameter Tesla coil and could not get ball
lightning. How did these guys do it?

>These guys are hard core magnetic mode antenna physics types. Nearly all
>RF antenna theory I have ever seen is E field oriented, so I am not

That is a straw man. No one said (speaking for myself) that someone
couldn't build an more efficient small antenna. What we are saying
is that any such antenna would have to have extremely high Q and
extremely narrow bandwidth. This was proven in 1959 by Harold Wheeler
in his paper in Proc. IRE (I'll get you the exact reference if you
want to read it). Wheeler's calculations are independent of
the shape and construction of the antenna and apply equally well
to "E-field oriented" as well as "H-field oriented" antennas
or whathaveyou. He simply gives a formula that tells you the minimum
antenna Q vs. efficiency given the size of the antenna expressed
(in wavelengths) in terms of the smallest sphere it will fit into.
His formula is one of those all encompassing implementation-independent
constaints like Shannon's communication channel speed limit.
Or relativity.

Antennas such as the Isoloop have already hit this limit. It has
reasonable efficiency, is quite small, but is painfully narrow band.
You could go ahead and invent an even smaller one if you like but
it will be even more narrowband (assuming it is equally efficient).

I will say this much for "magnetic" mode antennas: you don't run
into corona problems when you try to miniaturize them like you
do with "electric" field antennas. So they got that much right.
Err... maybe they didn't if they are generating ball lightning.

:
: Does anyone in net.land know the latest and greatest commericial
: off the shelf transceivers with 902-928 Mhz coverage?
: --
: Leonard Rosenblum (N2KRW) - ljr9282@hazeltine.com - (Huntington NY)

Motorola makes the best 902 - 928 MHz radios. But you might have to tweak
the software to make the radio behave as an amateur instead of commercial ;)

3770. 49MHz Walkie-Talkies to 6M conversions wanted

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-16 04:54:52 UTC
From: andrews@fms.com
Message-ID: <CEz4BH.HzA@fms.com>
Source record: 274741

Hello all...

I'm looking for any detailed modifications on how to convert _any_
49 MHz Walkie Talkie (this includes cordless phones {handsets}) to
anywhere in 6 meters (AM or FM) for an electronics project for
college.

Thanks in advance...

(mabey I should also post this to the QRP mailing-list, Hmmm...)

> Any information on a good VOX, relay operated PTT, or other circuit that
> will connect to the mic jack will be greatly appreciated.
>
I operate HF mobile, and the rig I have has VOX. However, the ambient
noise level makes VOX not as good an operating aid as one might
suspect.

I also use a one ear-covered headset, with a mike on a small boom off
the left earpiece. I have a separate push-to-talk switch, momentary
on, that I hold in my hands to key the rig.

I know you said you can not use your fingers, but it seems as if you
can use your hands/arms, and that means you could manage, perhaps, a
switch spring loaded and controlled by your arm, pressing against your
body...this does not require fingers, and yet coupled with a headset
would work very well...

If you would prefer, we can take this off-line for the gory deatils,
but I suspect airing this in the forum will get some very good minds
working to solve a problem with you...

Notes of Interest:

3X0DEX, REP. OF GUINEA. Ted, F8RU says that F6IBA claims he was not the QSL manager for that station and is surprised at the number of cards he is receiving. Info from the FDX Info net on 21170 Khz. More after 3X0DEX has been asked to verify his QSL information.

OH0, ALAND Is. Eric, OH2BBF will be QRV during the European WAE RTTY Contest Nov. 13-14 as OH0BBF. He plans to be QRV with his big antennas and big signal from rebuilt famous OH0W site. On high bands will be used stacked monobanders, a 3-el on 40 meters and slopers on 80. QSL via bureau or direct to his home call.

9U, BURUNDI. Heinrich, DJ6JC showed as 9U5DX. Those needing 9U5 may look for him til October 16th on the bands. QSL via home call.

ST2, SUDAN. Ali, G4OJW is now QRV with the call ST2/G4OJW. He operates primarly CW on 14062, main times from 1800 to 2000z but may also be heard at other times. QSL is via P.O. BOX 4016, Khartoum, Sudan.

FT4W, CROZET Is. Another rare one showed on the air. Christian, FT4WD appeared on the air in QSO with SP5KM. We hope for lot of activity. QSL via F6AXX.

Send your Bandpass and Notes for next week to Bob, WB2CJL @ W5KSI.#NOLA.LA.USA.NA or WB2CJL @ ZS5S.ZAF.AF or WB2CJL @ I5FLN.ITA.EU.

In article <CEtGHq.BKs@world.std.com>, howi@world.std.com (howie cahn) writes:
|> I'm really offended by the bigoted, homophobic diatribes by some here
|> that never even approach anything factual.

Hmmmm....

|> Unfortunately, these attitudes
|> are all too typical among hams.

What was that you just said above about "factual"? Oh, okay, "factual"
only applies to other people, not you....

|> I've heard similar stuff, together with
|> racially and sexually offensive comments, at ham clubs, hamfests, and, in
|> milder form, over the air.

I'm glad you've accumulated so much anecdotal evidence to share with us...

|> Did you ever wonder why hams are overwhelmingly
|> and disproportionately middle-aged, white men? Part of the reason is that
|> women, minorities, gays, etc. have heard it too and concluded that they're
|> not welcome.

Maybe because in order to generally participate in the hobby you have
to have a pretty decent job that pays a pretty decent salary, and thus the
hobby naturally tends to have more white, middle-aged men who have
achieved that level of income? It couldn't possibly be that minority groups
generally do not command a similar level of income, and therefore
usually do not seek to get involved in a hobby where they can't purchase
the needed equipment? Nor could it possibly be the fact that, until
recently, women didn't seek to get involved in technical hobbies,
ssuch as amateur radio, and instead were "encouraged" by society to get
involved with the local 4-H club instead?

Nah.... Its all a white, european-male-decendent plot...

|> By limiting the potential for attracting people outside of
|> this narrow demographic base we weaken the hobby.

Over the past ten years, the number of minorities and women involved
in the hobby has increased dramatically. Perhaps you should write to the
League and get a copy of their demographic studies.

|> We have to keep lowering
|> licensing standards to keep our numbers up.

You couldn't be more off-base. The number of amateur radio operators
has been constantly increasing. What concerned the League and others who wanted

a no-clue license was that the average age of operators was increasing, creating a kingdom of old geezers. So, to augment the number of "young" amateurs involved in the hobby, standards have been lowered, since we all know that the youth of today are just too plain stupid to understand anything remotely related to radio theory. Youth today think "radio theory" as being a logical exercise on how you manage to fit 10 videos in 1 1-hour slot on MTV.

Around here, what the no-clue license bought us was not a flood of young-aged amateurs, but instead a whole bunch of CB-rejects who think that a "dummy load" was, in fact, ejaculate which resulted in the conception of a retard.

|> Instead of trying to diversify
|> our ranks, the League has chosen to validate the prejudices of some of its
|> members.

The League is a business. Businesses make money by catering to their customers' desires. If the majority of amateur operators want to be anti-homosexual, then its in the best interest of the League to adopt an anti-gay position.

|> Personally, I hope Lambda wins its suit.

Personally, I could give a shit either way.

3775. Re: Rote Memorization (was: code tests)

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-16 12:49:30 UTC
From: kd1hz@anomaly.sbs.com
Message-ID: <1993Oct16.124930.19183@anomaly.sbs.com>
Source record: 274748

In article <8088.2cbae7c0@hayes.com>, bcoleman@hayes.com (Bill Coleman) writes:

[are we to assume that all no-codes have]
> similar short between the headsets?

If you come to Rhode Island (Lil Ghroady, as we call it...), yes.

In this area, the no-clue license has given the CB-reject the ability
to get on the amateur bands by simply memorizing their local Radio Shack
Gordon West no-code-tech book. "Learn The Theory"? GASP! That would be
TOO MUCH WORK!

> I'm sure that anyone of us can dig up stories of clueless amatuer operators
> of ANY license class.

And no doubt you'll find a disturbing trend... CB-rejects.

[Did I ever offer to help the poor no-clue out?]
> No? I thought not.

Guess again. I let him borrow my Jerry Ziliak tapes for 8 months,
until it became apparent that he wasn't using them. "I'm too busy",
he said. Yup... "But not to busy to be yacking day and night on the local
2-meter good-buddy box...", I replied.

Another no-clue story from CB-rejectville:

A local no-clue is is well known for embellishing on every topic
he talks about (including his "studying the code") was recently overheard
on a simplex frequency talking to his wife, explaining how he was constipated.
Some local hams overheard him, and went to a local CVS, where they
purchased a sympathy card ("We can only empathize with what you're going
through. Only God knows for sure. So we're all praying for you that God will
hear your prayers [handwritten] because we all know you're full of shit.")

They then had this sympathy card, along with a gift-wrapped enema... yes,
that's right, an enema... delivered to his house.

Well, rather than just keeping silent on the gag, the no-clue gets on the
most popular repeater in the state (which covers the entire state of RI)
and proceeds to "complain" for over 30 minutes about the "gift", telling
everyone in the state what was on the card, and what he received for a present.

Then... To make matters worse, a week later his wife was constipated,
so she actually used it... After all that moaning....

>>by radio without taking a license exam.
>
>Just a question? Howzabout those walkie talkies you see contractors using
>on a jobsite. Do these fall in the same or different channel??

Some contractors may be using GMRS, but most are using the commercial
itenerant channels. There are several at VHF and UHF, the most popular
is 151.625 MHz. If they're local contractors, they may have a regular
assigned business band channel instead. There are several types of
channels available, from strictly simplex to trunked repeater systems.
Itenerant licensing is the easiest and cheapest since you don't have
to go through a frequency coordinator, so most people who move from
jobsite to jobsite use those channels.

If you monitor 151.625 for any length of time, you're almost certain
to hear a work crew.

burke_br@adcae1.comm.mot.com (Bruce Burke Sp App) writes:

>Those that think they can modify the software, then make a living from that,
>is where the real contention is and that is the point I have been trying to
>get at.

>If you do modify a radio for your own personal use is fine, BUT:
^^

WHOA! This is a complete and utter turn of events.

(I realize that Bruce probably doesn't speak for Motorola, but this is
a logical exercise on the implications of Bruce's statements...)

"Motorola" now thinks that if I modify a radio myself for my own personal
uses that is "fine". Hence, "Motorola" now ackowledges that my modification
of my radio's firmware is not a "copyright violation". Furthermore, they
are now ackowledging that if my modifications just happen to "unlock"
certain feature of the radio which I did not pay for, that that is also
"fine", and is not "theft of service", as they claim.

Since we all know that selling information, such as "changing bit 3 of
byte 0x123 on will activate full-band receive/transmit" is not a
violation of Motorola's intellectual-property rights (in lieu of a
written agreement preventing me from doing otherwise,) then it is
therefore perfectly legal for me, as an owner of a Motorola radio,
to call up "Joe's Modification Emporium", and purchase a piece of
paper that simply says "change bit 1, byte 0x123, on", and
modify my radio... Even though I obtained the information on *HOW*
to do it from another source (through perfectly legal means),
there is still no "theft of service", since "Motorola" says that
modification for my own personal uses is "fine".

Next step: I don't have the tools to perform the modification
myself. So I hire "Joe Firmware" to make my modifications for me.
I tell Joe: "change bit 1, byte 0x123, on". Joe may or may not
know where the firmware chips that I handed to him came from
a Motorola radio. For that matter, I may hand him the entire radio;
he has no knowledge of where it came from, or whose firmware is
in the radio. Legal? Sure.

This change of "Motorola" attitude shows that "Motorola" knows
that their contention, i.e. it is a violation of copyright laws
(illegal) for someone to modify your radio to give you extra
features that are "activated" by simply setting a bit somewhere,
are complete hogwash, and that their advertisements are nothing

more than intimidation techniques designed to frighten people
(mainly those who own radios) into only doing business with
Motorola for radio modifications.

>
>Does anyone in net.land know the latest and greatest commericial
>off the shelf transceivers with 902-928 Mhz coverage?

As far as I know, there are none. If you're willing to fight off
Motorola's lawyers, you can modify the firmware on some of their
800 MHz radios and use them. If you're really good, you can hack
a cellphone to work. The best course though is to use a 2 meter
radio through a transverter, like the ones made by SSB Electronics.
Driven by a HT class 2 meter rig, these units will give you 20 watts
output and a good GASFET preamp and converter for receive.

Yes both effects are to be expected. The presence of the test equipment,
and your body, in the near field will tend to detune the antenna. And
of course the feedline loss will lower the *apparent* Q of the antenna
as seen at the coax feedpoint. The equations and examples I posted
recently will allow you to calculate the true bandwidth from the measured
values you get in the shack.

Gary

3781. Re: SCA - Subcarrier on FM Broadcast

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-16 13:59:02 UTC
From: joe@netcom.com
Message-ID: <joeCEztIE.4wJ@netcom.com>
Source record: 274754

I recently ordered and received three SCA demodulator boards from SCS Radio Technology after noticing an advertisement in Radio News. Bruce Elving's SCA design uses a CA3089 IF/detector chip and a PLL (I designed his XR2211 PLL SCA demodulator) SCA. Bruce also sells FM receivers modified with the boards.

What was interesting about the SCS SCA board design, while it uses a CA3089E IF chip also, a multipole filter in front of the 3089 decreases main channel crosstalk interference (by 60 dB). David's board is of excellent construction, with no jumpers and small size to be inserted in an FM receiver's FM detector stage (before deemphasis attenuates the SCA signals).

Anyway, three pretuned boards are available from SCS, 57Khz, 67Khz, and 92Khz - $20.00 each, $60 plus $6.00 P&H for all three. I am satisified with the design and construction of each board. One area of modification I would make is to monitor the SCA signal's multipath and level with an x-y monitor. Use pin 13 of the 3089 chip for a signal level (scope y) output and pin 7 for the y axis output. Of course levels must be set to set vertical and horizontal traces. A flat vertical line, max amplitude, is the ideal signal for tuning. A "wavy" line illustrates multipath. This is a great tool for tuning FM signals...

SCS's Address and Phone Number:

SCS Radio Technology
5742 Fairoak
Springfield, MO, 65810

Phone:

417-881-8401

He (Dave Jackway) takes checks only at present. While his focus is large-volume customers, he will sell to the small customer...

(I have no affilication with SCS, only as a satisfied customer)

Anybody have experience with converting some of the old SSB CB
rigs to 10 or 12 meters. I've got a really nice Cobra 138xlr that
I'm trying to figure out the best way to modify.

Next question: What are some of the model numbers of the CB rigs covered
in that 'shrink wrapped' book on equipment mods that HRO and other stores
sell. I absolutely refuse to plunk down $19.95 for any book that
is packaged in plastic.

> October 6, 1993

> Calling all scouts. This year's Jamboree On The Air, JOTA,
> will begin at 0000 hours local time, Saturday, October 16,
> and end at 2400 local time, Sunday, October 17. World Scout
> Frequencies for phone are 3740, 3940, 7090, 14290, 18140,
> 21360, 24960 and 28990 kHz....

Salt Lake City Tribune had a great article Sunday Oct 10, generated by a local ham's inquiry to the paper, that told about the JOTA, and specifically invited the general public with short-wave receivers to tune in and see what was going on. Frequencies were listed in the article.

Seems to me that this was one of the best ways I've ever seen for getting the public interested in amateur radio. How many other clubs have put out publicity suggesting that the general public listen in for a specific purpose, and telling them how?

From: rfeldber@pearl.tufts.edu
Message-ID: <1993Oct16.154947.1@pearl.tufts.edu>
Source record: 274760

I am thinking about getting back on the air after a ten year absence. However,
I am a bit concerned about magnetic fields coming off my gear. My old Kenwood
TS-520s used to throw a relay on my furnace a full 30 feet away from the rig!
I never thought about it at the time, but now it gives me some pause. Is the
new
gear any better? Are there some rigs better than others? I would appreciate any
comments direct to my E-mail address, since I rarely get into this newsgroups.
Thanks for the help

The guys at Newsline used to offer a tape service. You would mail a
cassette tape, each week they would dub and send it out. All you needed is
two tapes...one going and one comming. This system worked well for several
bay area groups. You might enquire if they are still doing this.

RACESBUL.296 DATE: Oct. 18, 1993
SUBJECT: MISC - Responders and their vehicles - Part 3/4
(4) What the local authorities use can serve as a yardstick
by which to gauge your next vehicle purchase. Yes, that subject
had to be brought up somewhere along the line in this discussion.

It's a tough topic to cover but one that most have to face sooner
or later. In short, a Volkswagen "Bug" is not a recommended
emergency vehicle! That's fine, you say, but who's going to buy
this new vehicle for me? No one except yourself, my friend, and
that's what can separate -- or delay -- the will from the
ability. From experience I can say that it usually doesn't happen
overnight. Your type of vehicle improves with your duties, your
commitment, and financial ability.
(5) The importance of your vehicle appearance may affect
your ability to gain access to incidents, particularly in urban
and suburban areas. In other words, it doesn't hurt for you and
your vehicle to look like you belong there. It establishes
credibility and acceptance. You may be the most experienced and
valuable volunteer in the county. But we suggest you don't
respond in a vehicle that might have been driven by Elvis, sports
a weird or decrepit paint job, has strange or noncommercial
antennas dissimilar to those used by local authorities and is
driven by someone dressed as if he were going to a convention.
If you do, don't be surprised if they are laughing at you as
you roll up to the roadblock. That's just before they tell you to
do a one-eighty and go home. Whether you like it or not, how you
look IS very important. Anything less is an embarrassment to the
agency you represent and the rest of your people --- both paid
and volunteer.

3789. GAY INTERNATIONAL HAM RADIO CLUB

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-16 22:46:28 UTC
From: dbledsoe@netcom.com
Message-ID: <dbledsoeCF0HxH.4n7@netcom.com>
Source record: 274767

What is LARC?

The Lambda Amateur Radio Club (LARC) is an international, non-profit organization of amateur radio operators (hams), short wave radio listeners, and persons interested in amateur radio, electronics and computers most of whom are members of sexual minorities. Most LARC members possess a high degree of technical knowledge relative to radio, electronics and/or computers. Most possess government issued licenses which allow them to operate specialized radio equipment and peripherals. LARC members routinely use their specialized knowledge and equipment to communicate with other hams locally and worldwide!

However, even though LARC's talented men and women are making significant contributions to the growth and development of radio, electronic and computer technology, LARC has not been welcomed into the amateur radio community in the United States. Efforts to publicize the existence of the club and thereby expand the membership have been frustrated by the one and only professional organization representing the ham radio community, the American Radio Relay League. The 150,000 member strong League has refused since 1985 to allow LARC to advertise its existence in _QST_ magazine, the ARRL's membership journal.

In fact, only one of the three major monthly publications covering the amateur radio hobby currently permits LARC to advertise. AND NONE HAS EVER COVERED LARC FROM A HUMAN INTEREST POINT OF VIEW OR EVEN ONCE PUBLISHED A DESCRIPTIVE PROFILE OF LARC. Unfortunately, we've also been unable to convince the national gay and lesbian media to run a feature on our club. Thus LARC, a very special organization of highly talented sexual minority members, is largely a well kept secret!

But the story gets even worse! Two editors of ham radio publications have attacked LARC in print, one as recently as in the September, 1993 issue of his magazine!

In March of 1992, LARC filed a discrimination complaint against the ARRL in Connecticut with the aid of the Lambda Legal Defense and Education Fund. The ARRL is contesting the claim and the process could drag on for years. Meanwhile, we're remain unable to get the word out about our club.

I'd like to invite interested netters to join LARC. Here's a description of our club and its activities:

LAMBDA AMATEUR RADIO CLUB

LARC: Over the Years
==========
The Lambda Amateur Radio Club (LARC) is an international, non-profit organization of amateur radio operators (hams), short wave radio listeners, and persons interested in amateur radio, computers and electronics, most of whom are members of sexual minorities. While most members of LARC are gay men, lesbian women, bisexuals or transgendered individuals, membership is open to anyone supportive of sexual minorities. The club was founded in June of 1975 by a gay American ham radio operator who advertised in a national publication seeking to meet other gays and lesbians with an interest in ham radio. Before long membership consisted of about two dozen persons in the U.S. and Canada. The club grew slowly and operated informally until 1984, when an aggressive campaign was launched to seek out new members and to publicize the existence of the club. Since 1984, membership has increased steadily. LARC currently has members in several countries including the U.S., Canada, Finland, Sweden, Switzerland, the Ukraine, and the United Kingdom and is beginning to grow more rapidly as more and more individuals learn about the club. Most but not all LARC members are licensed ham radio operators.

Goals and Objectives
==========
LARC is a service-oriented club. During 1986, LARC members adopted a Constitution & Bylaws which set forth the purposes and goals of the club:

o offer club membership, benefits, and a sense of community to members of sexual minorities who share a common interest in amateur radio, computers and electronics;
o promote friendship and good fellowship;
o provide support to members;
o conduct an ongoing outreach program;
o provide public service;
o promote the amateur radio service.

LARC members elect club officers for a term of two years.

Activities
==========
LARC activities consist of E-mail activities on Internet, GEnie and America On Line, and on-the-air meetings of members several times a week on various shortwave bands utilizing voice, Morse code, and digital modes of communication. In addition, the club publishes a monthly newsletter, the LAMBDA NET NEWS. Club members are encouraged to meet and correspond with each other. Members gather at various local events such as computer conventions or hamfests. Once a year, the club conducts an official business meeting at the Dayton Hamvention, one of the largest amateur

radio, electronics and computer conventions in the world.

Accomplishments
===============
LARC members are proud of the accomplishments of the club and its members over the years. The club has been instrumental in aiding persons to obtain their amateur radio licenses. The club has successfully encouraged inactive amateur radio operators to again become active in the hobby. LARC members are active participants in pioneering technical advancements in the realms of amateur satellite communications and digital communications. LARC members have formed local chapters to promote the club at the local level and members continue to express an interest in forming additional chapters. One of the most significant benefits of having local chapters is the local public service they can provide to their community. In addition, LARC has sponsored two OSCAR-13 (Orbiting Satellite Carrying Amateur Radio) DXpeditions to the Caribbean to activate three new countries on "the bird."

LARC: The Future
=================
Looking to the future, LARC will become more visible in the sexual minority community and the amateur radio community. Appearances at community and public service events at which members provide communications assistance are planned. An outreach effort to the international community has begun. The continued growth of the club is beneficial to the amateur radio service, which is suffering from a slow growth rate and an ageing population.

"Highly skilled and talented members of sexual minorities will continue to make positive contributions to the computer, electronics and amateur radio fields" said Jim Kelly (KK3K), President of LARC. "LARC is a success in large part because we're proud to proclaim the participation and technical accomplishments of gay men, lesbians, bisexuals and transgendered individuals in these important technical areas".

Membership is now open to those wishing to join B.A.R.F., the

BESTIALITY AMATEUR RADIO FRATERNITY

We are a sexual minority organization who try to promote:
* a deep love for all kinds of animals
* good operating practices both on the air and on our animals
* public service (free animal grooming by animal loving individuals)

Our organ-ization consists of many well-educated amateur radio enthusiasts
with backrounds in Biology, Animal Husbandry, Veterinary Science, Proctology.

Misconceptions of our organization are deeply rooted and we hope that
by spreading ourselves open to the public we will be able to overcome
the bestialphobic feelings that many are prone to innately have.

The following regional chapters gleefully await you and your pet:

BARF in the US: 7831 Pork Road, Sheppard, TX

BARF in Europe: 1334 Lambs Way, Horsehead on the Thames, England

BARF in Asia: [we are attempting to penetrate the Asian market at this time]

Jeff NH6IL (back in the days when we only kissed our pets: WA6QIJ)

3797. Alinco 206T maintainance help needed

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-17 01:52:00 UTC
From: v111qheg@ubvms.cc.buffalo.edu
Message-ID: <CF0qGp.DGB@acsu.buffalo.edu>
Source record: 274772

I have an Alinco 206T mobile rig that has a major problem. It will not transmit. The T/R switch fires it into the TX mode, but no more than a couple miliwatts get out. I have estimated that either the output transistor died or a switching diode went.

Anybody have experience with this type of failure? Anybody know how to get at these parts and how available parts would be?

Any help is APPRECIATED.

Thanks,

Peter KB2NMV/VP9

Satellite, shortwave and other electronic media news from Radio Sweden.

This week's bulletin was written by George Wood.

Packet Radio BID SCDX2189

All times UTC unless otherwise noted.

NORDIC MEDIA NEWS:

NORTH STAR--We've reported before on a proposal before the Nordic Council for a joint Nordic television channel. Those plans took a concrete form Friday (October 15), when the public service broadcasters of Sweden, Norway, Finland, and Iceland presented a formal proposal. Should the prime ministers of the four countries approve the project at a meeting next month, the broadcasters say the Nordic satellite channel "Nordstjarnan", or "North Star", could be on the air by the end of 1994 or early 1995.

As a satellite channel, it would only be available to cable subscribers or home dish owners, at a cost of around 7 dollars a month. Some films and other more attractive programming would be offered for an additional charge.

The fifth Nordic country, Denmark, is not participating in the project because the channel would not be available to all viewers. The Danes would prefer to strengthen the current Nordvision co-operation. (TT and "Pressens Tidning")

SWEDISH COMMERCIAL RADIO--We reported last time on the allocation of the first commercial radio frequencies in Sweden, which were awarded in an auction solely on the basis of the highest bids.

Now the Local Radio Licencing Board has asked that more frequencies be allocated northern and central Sweden, especially in Norrkoping, to the southwest of Stockholm, Uppsala, just north of the capital, and Umea in the far north. All three cities received frequencies for two stations, so that there would be some competition, or at least alternatives for potential advertisers. But the highest bidder auction system worked against that ambition.

In Norrkoping the same group won bids for both channels, while a local newspaper bought both licences in Umea. A Christian fundamentalist group won one frequency in Uppsala, and since they don't plan to carry ordinary advertising, the Licencing Board is afraid the remaining broadcaster will have a monopoly on advertising rates.

The auction for licences in southern and western Sweden will be held in early December. Five channels will be allocated in Gothenburg, and two each in 9 other cities. (TT, "Pressens Tidning", and "Journalisten")

SWEDISH COMMUNITY RADIO--Sweden's Community Radio Board has threaten to fine three community radio stations for illegally carrying networked news from the Swedish news agency TT. The community radio law says centrally produced programming can only be used "to a limited extent", which the board has interpreted to mean that carrying a short bulletin of networked news once an hour is forbidden.

The stations have objected to this interpretation. Altogether 20 Swedish community radio stations are relaying news from TT. (TT)

SWEDISH RADIO--Sweden's public service radio broadcaster, Swedish Radio, is investigating introducing a national program in the Finnish language after digital radio is introduced here in 1995. The largest immigrant group in Sweden comes from Finland, and Finnish programming currently accounts for around 2 and a half hours a day on Swedish Radio's Program 2. That channel primarily offers classical music, but also carries minority language and educational programming. In Stockholm these have been shifted onto other transmitters, and Program 2 in the capital is a 24 hour classical channel. Swedish Radio hopes to extend this service nationally when digital radio is introduced. (TT)

THOR--We've often mentioned Norway's Thor satellite, which offers a Scandinavian package of CNN, Eurosport, the Children's Channel, Discovery, MTV, and Filmnet Movies, however using obscure encoding systems generally found only in Norway. Now Filmnet has begun distributing Thor subscriptions in Sweden, for around 8 dollars a month. However, Filmnet may also be involved in a European version of Sky's Multi-Channel package, called "Multi-Choice Kaleidoscope". (Bertil Sundberg in "Elektronikvaerlden")

EUROPEAN MEDIA NEWS:

ASTRA--The Adult Channel has left transponder 26, home of Sky Movies Gold and Radio Sweden. TV Asia now occupies this transponder continuously between 23:00 and 17:00 hrs UTC. TV Asia has stopped broadcasts from transponder 8, and Sky One now continues there until 01:00 hrs UTC daily.

Some British local ILR stations are to appear on the Discovery and Bravo transponders in the near future. (James Robinson)

QVC began its broadcasts on Astra transponder 38 as scheduled on October 1st. The transmissions are encoded in Videocrypt. (James Robinson)

British Sky Broadcasting has been publicly rapped by the Independent Television Commission's Television Advertising Complaints report for August

1993 over TV adverts for its multichannel offering.

The complaints centered around BSkyB's claims that 14 channels were being added into the Multichannels package, and that nine of them had never previously been carried on satellite. Complainants pointed out that some channels would not be encrypted on the launch date and would remain available without payment of a subscription fee, others would not be on the air at the time of launch, and that some of the channels claimed to be available for the first time on satellite had been, in fact, carried on Intelsat and Eutelsat satellites for some time. ("Satnews")

EUTELSAT--Egyptian Television's long-awaited international channel seems to be about to start. James Robinson reports low-powered test signals from Nile TV International on Eutelsat 2-F3, on 11.146 GHz. This same satellite also carries the Egyptian Space Channel, and other Middle Eastern broadcasters from Turkey, Morocco and Tunisia. Telepace has also moved to this satellite, replacing RTP. An Algerian network was to transmit on the Telepace transponder. (James Robinson) But BBC Monitoring recently reported that those plans have been postponed.

Portugal's RTP has joined Italian, Spanish, and Turkish channels on Eutelsat 2-F2. (James Robinson)

RTL--Luxembourg's RTL Television is to begin relays of its French service by satellite soon. The choice is between Astra, Eutelsat, and France's Telecom satellite. RTL currently broadcasts to eastern France from Luxembourg and is also carried on some French cable networks. (AFP via BBC Monitoring)

MCM--MCM Euromusique is determined to introduce encryption for its 24-hour music service from October 15th. After being forced off the air for some time because of financial problems, the station is determined to remain "on air" in the future. It will be encrypting its signal in D2-MAC/Eurocrypt-M, and annual Europe-wide subscriptions will be a FFr150 one-off payment for the smart card, followed by FFr200 per year. ("Satnews") This apparently refers to the on-again, off-again D2-MAC signals on TDF1 on 11.727 GHz, which have been in the clear. MCM is also part of the Canal Satellit Nagravision package on Telecom 2A.

HISPASAT--Two new television channels, one with cultural programs, the other with exclusively sports programs, are to begin broadcasts on Spain's Hispasat satellites in December. They will be operated by the public RTVE and are to be in the clear. (RNE via BBC Monitoring)

HDTV--Broadcasters and regulatory authorities in Europe are working together to find a common standard for digital high definition (HDTV) services. A memorandum of understanding has been signed by a group of satellite operators, broadcasters, manufacturers and regulators, with the signing ceremony in Bonn, Germany.

The group, known as the European Launching Group for Digital Video Broadcasting (DVB) project, comprises of 85 members including one Japanese electronics firm. ("Satnews")

MIDDLE EASTERN MEDIA NEWS:

ARABSAT--Arabsat, the Arab Satellite Communications Organisation, has signed a USD 104 million loan with eight banks to part-finance the building and launch of two new satellites. Aerospatiale, the French aerospace company, is building the satellites at a total cost of USD 258 million. The first satellite is set to be launched in 1996, with the other to be mothballed for an unspecified period.

The loan has been syndicated primarily through Middle Eastern banks. Arabsat is paying cash for around 60 percent of the total satellite's cost from existing cash reserves. "(Satnews")

AFRICAN MEDIA NEWS:

SOUTH AFRICA--Sky News was due to start 12 hours a day of broadcasts to South Africa, beginning October 3rd. Using a relay from Intelsat, the broadcasts are on the SABC's CCV channel. CNN is also carried on CCV. Sky plans to increase its African coverage beyond South Africa. ("Business Day" via BBC Monitoring)

ASIAN MEDIA NEWS:

STAR-TV--At the annual meeting of News Corporation, media tycoon Rupert Murdoch announced the splitting of his new Asian aquisition, Star-TV, into four divisions, one each for China, India, Indonesia and the Middle East. Murdoch also reported his Fox cable channel in the United States plans to begin service on March 1st to between 20 million and 30 million homes. Fox has also launched a small cable channel to South America, while Europe's Sky News has just started a service to South Africa (see above).

The Hong Kong-based Star-TV faces problems following China's recent announcement of new rules limiting access to satellite dishes, including a virtual ban on purchases or installations by individuals who had been snapping up dishes to pull down foreign television broadcasts.

The past two years have seen an explosion of foreign satellite television in China, posing a serious threat to the Communist government's information monopoly. Department stores and other shops took advantage of a dearth of explicit regulations and sold tens of thousands of low-cost satellite dishes. (Reuters)

ASIASAT--Star-TV plans to expand when the Asiasat-2 satellite is launched in early 1995. Australia's most profitable commercial TV network, the Nine Network, has taken options on 10 transponders on the new satellite, half the high-powered transponder capacity. The satellite's footprint is planned to extend from Japan to the Middle East and south to Australia. ("World Broadcast News")

PALAPA--Asia's first business television channel will begin broadcasting next month. Among the owners of Asia Business News are Dow Jones, the American cable giant TCI, Television New Zealand, and the Singapore Broadcasting Corpation. The channel will transmit on Indonesia's Palapa B2P satellite. CNN, the sports channel ESPN, Home Box Office, and Australia Television

International already use Palapa. ("Satnews")

BBC--The BBC has formed a joint venture with a Japanese trading company to launch a Japanese version of World Service Television (WSTV) early in 1994. Signing the agreement with Nissho Iwai, Japan's seventh-largest trading company, is a break with tradition for the British state-owned broadcaster which is usually reticent about forming alliances with profit-making organisations.

A new company has been formed for the joint venture. Nissho will be the majority partner in Satellite News Corporation, and it will act as the advertising agent for BBC WSTV. The BBC will retain the final control on editorial matters. WSTV will initially be available to cable and satellite viewers in the region, although a deal is understood to being made with one of Japan's six terrestrial broadcasters for retransmission rights. ("Satnews")

NORTH AMERICAN MEDIA NEWS:

MEDIA MERGERS--In the United States, the competition between Viacom and QVC to buy Paramount Communications has been eclipsed by one of the biggest corporate mergers in history, between the country's largest cable operator, TCI, and Bell Atlanta, which operates the telephone networks in the Middle Atlantic states. Together, the two companies serve 42 percent of the American population.

While Bell Atlantic has expertise in two-way audio technology, TCI's strength is in sending multiple video signals, with a wide variety of programming. Together, as they install high-capacity fiber optic networks across the country, they will eventually be able to offer users a vast array of new entertainment and information technologies, including hundreds of cable TV channels, pay-per-view movies on demand, video games with competitors thousands of miles away, armchair shopping, two-way educational programs, and research access to vast databases.

Media analysts say the merger is likely to speed access to a national "information superhighway", but consumer advocates warn that it could also create less competition, driving up users' rates. The deal also includes TCI's programming company Liberty Media, which partly owns the shopping network QVC. Experts say the merger may strengthen QVC's bid to buy Paramount.

Recently the telephone company serving New York and New England, Nynex, bought into QVC's Paramount rival Viacom, which besides being a major cable operator, also owns MTV, VH-1, and Nickelodeon. In a similar move, the US West telephone company is investing in America's second largest cable operator, entertainment giant Time-Warner. ("San Francisco Chronicle", "New York Times", and "San Jose Mercury News")

REGIONAL NEWS CHANNELS--King Broadcasting, which owns four television stations in the Pacific Northwest, says that it is to launch a 24-hour cable news channel specialising in regional coverage. Around 1.5 million viewers will be able to tune into the service, known as Northwest Cable News, from

Spring 1994. Once operational, it will be the largest regional news service in the US, and it will hire 100 additional staff to provide regional news coverage. ("Satnews")

KRON TV in San Francisco is also creating a cable-only regional news channel. When the new Cable Consumer Protection Act forced cable operators to negotiate for the rebroadcast of over-the-air channels, KRON demanded that cable operators carry the new news channel as a condition.

Other cable operators have been compelled to carry NBC's new cable channel America's Talkiing, a spinoff off CNBC, which will offer talk shows and informational programming. ("San Francisco Chronicle")

KGAY--KGAY, the audio service for gay and lesbian listeners, has left satellitetelevision. They were behind in paying their uplink bill and the uplinker pulled them on September 14th. It is not know if they will try another attempt at launching again to continue their service. ("Satnews") KGAY broadcast from Denver on Galaxy 3, transponder 22, 7.46 MHz. ("Satellite TV Week")

DMX--International Cablecasting Technologies Inc. has signed a USD 20 million contract with Spar Communications Group for the supply of digital audio receivers that will receive ICT's 120 channel Digital Music Express (DMX) service by DBS satellite.

DMX initially started with a 30 channel offering, but the company is in the middle of an aggressive service and geographical expansion programme. With the new receivers, customers can tune into 120 20Khz CD-quality music channels at the touch of a button.

The new offering will be initially restricted to the North American marketplace, and it will enable the company to expand its business music offering, DMX for Business, which provides commercial-free, DJ-free music to stores, offices and factories.

A 75cm antenna will be used to receive broadcasts throughout the USA and North America from the SBS-5 satellite. Each receiver is fully addressable, enabling special broadcasts to be sent to subscribers. There is also the capability to offer generic corporate programming broadcasts on under-utilised channels, switching in receivers as required. ("Satnews")

MBC--When the London-based Middle East Broadcasting Centre bought the UPI news agency there were reports the Arabic language channel would expand its broadcasts from the Middle East and Europe into North America. Instead, MBC is buying into an existing channel.

MBC has signed an agreement with the Arab Network of America, the dominant Arabic language network of the US, to exchange news and programming. ANA broadcasts its programming by satellite from
studios in Washington, and broadcasts are relayed on many cable television systems throughout North America. A nationwide Arabic radio service is also provided by ANA, and distributed over satellite for local terrestrial redistribution. ("Satnews") ANA broadcasts on the Satcom 2R satellite,

transponder 1.

SHORTWAVE AND LOCAL MEDIA NEWS:

AFGHANISTAN--The Radio Afghanistan external service has been heard on 4775 kHz with the following schedule: 14:00 Urdu, 14:30 English, 15:00 Russian, 15:30 hrs Arabic. (BBC Monitoring)

AZERBAIJAN--The external service of Radio Dada Gorgud broadcasts in Arabic at 15:00-17:00 hrs on 6175 kHz, in Persian and Turkish at 13:00-14:00 hrs on medium wave (1476 kHz?), and in English at 17:00-18:00 hrs on 15240 kHz. New services were added in January in Talysh (spoken in southern Azerbaijan), Kurdish, and Armenian on 1476. 4957, and 15240 kHz.

French and German broadcasts are due to begin in mid-October, each 15 minutes long. (Radio Dada Gorgud via BBC Monitoring)

CAMBODIA--Radio UNTAC, the Cambodian voice of the United Nations, ended its broadcasts on September 23rd, after 13 months on the air. (BBC Monitoring)

RUSSIA--During the recent siege of the Russian parliament, a very low-powered radio station calling itself Radio Parliament was heard on around 580 kHz.

A group of Russian television journalists say that they are planning to launch their own independent channel. Evegenii Kisselev said on the Ostankio TV weekly political programme Itogi that the channel called Segondnya (Today) would begin in October, using journalists from the Ostankio and Russia-state television broadcasting companies. Many journalists are leaving the state-owned company because of alleged interference by political paymasters. ("Satnews")

The independent TV station NTV ("Nezavisimoye Televideniye" - "Independent Television") was scheduled to go into operation on channel 5 in St. Petersburg on October 10th. It apparently will be owned by the "Most" group. (BBC Monitoring)

Russian president Boris Yeltsin has been set a letter by the directors of the transfer of the fourth state-run channel to the "Most commercial company". Ostankino is concerned that the creation of
independent superstations will actually restrict viewer choice instead of expanding it. ("Satnews")

SOMALIA--The pro-Aydid Radio Mogadishu, the Voice of the Great Somali People, reappeared on September 22nd on 6870 kHz. It suffered from continuous interference on the channel, which took the form of a pulsating white-noise signal apparently transmitted without carrier but centered on 6870 kHz. On September 27th the pro-Aydid station moved to 6877 kHz, where it was free of interference. (BBC Monitoring)

Sweden Calling DXers is the world's oldest radio program for shortwave listeners. Radio Sweden has presented this round-up of radio news, features,

and interviews on Tuesdays since 1948.

Radio Sweden broadcasts in English:

To Europe:

17:15 hrs on 1179 and 6065 kHz
18:30 hrs and 21:30 hrs on 1179, 6065, and 9655 kHz
22:30 hrs on 1179 and 6065 kHz
23:30 hrs on 1179 kHz

To East Africa and the Middle East:

18:30 hrs on 15145 kHz

To Asia and the Pacific:

12:30 hrs on 15240, 17740, and 17865 kHz
23:30 hrs on 11910 kHz
01:30 hrs on 9695 and 11695 kHz

To North America:

13:30 and 14:30 hrs on 15240 and 17870 kHz
02:30 and 03:30 hrs on 9695 and 11650 kHz

To Latin America:

00:30 hrs on 9695 and 11650 kHz

The broadcasts at 17:15, 18:30, 21:30 (weekends only), and 22:30 hrs are relayed on satellite on Astra transponder 26 (Sky Movies Gold) audio 7.74 MHz and Tele-X on 12.207 GHz (TV4) audio 7.38 MHz.

Contributions can be sent to DX Editor George Wood by fax to +468-667-6283, from Internet, MCI Mail or CompuServe (to the CompuServe mailbox 70247,3516), through the FidoNet system to 2:201/697 or to SM0IIN at the packet radio BBS SM0ETV.

Reports can also be sent to:

Radio Sweden
S-105 10 Stockholm
Sweden

Contributions should be NEWS about electronic media--from shortwave to satellites--and not loggings of information already available from sources such as the "World Radio TV Handbook". Clubs and DX publications may reprint material as long as MediaScan/Sweden Calling DXers and the original contributor are acknowledged, with the exception of items from BBC Monitoring, which are copyright.

We welcome comments and suggestions about the electronic edition, Sweden Calling DXers, and our programs in general.

Thanks to this week's contributors Good Listening!

3800. JVFAX6.0

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-17 02:23:15 UTC
From: bischoff@freenet.scri.fsu.edu
Message-ID: <CF0ryr.Itz@mailer.cc.fsu.edu>
Source record: 274776

I have obtained a copy of JVFAX6.0 and think it is fabulous. It is a significant step forward in compatability with the various VGA cards found today and (I guess) the various modes of SSTV transmission - which brings me to the point. JVFAX6.0 conatins the following SSTV modes: WR 24/128; WR 48/128; WR 48/256; WR 96/256; WR120; WR 180; Martin 1; Martin 2; Scotti 1 and Scotti 2. My problem is this, when listening to the SSTV net on 14.230, I had no problem decoding anything that was announced as a Scotti 1 or a Scotti 2 - however, I am not sure as to which of the listed modes (if any) correspond to Robot 72 or Robot 36. Can anyone help a newbie out?? Any other pointers???
Can anyone provide me with some SSTV net times and frequencies?
Thanks in advance for any assistance you can provide.
73s
Bill.

>membership have been frustrated by the one and only professional
>organization representing the ham radio community,

I'm not sure what you mean by "professional organization" or how it relates to an "amateur" hobby, but W5YI and Newsline both covered the lawsuit recently.

> the American
>Radio Relay League. The 150,000 member strong League has refused
>since 1985 to allow LARC to advertise its existence in _QST_
>magazine, the ARRL's membership journal.

Did they publish the ads before 1985? I've heard different stories about this.

>In fact, only one of the three major monthly publications
>covering the amateur radio hobby currently permits LARC to
>advertise.

Which is that? I had the impression that 73 took the ads and one time, but had decided to stop.

>AND NONE HAS EVER COVERED LARC FROM A HUMAN INTEREST
>POINT OF VIEW OR EVEN ONCE PUBLISHED A DESCRIPTIVE PROFILE OF
>LARC. Unfortunately, we've also been unable to convince the
>national gay and lesbian media to run a feature on our club.

Wasn't there an article about LARC Golden Gate in one of the local papers?

Has anyone ordered the ARRL publication guidelines, written a story, and sent it in to QST?

>But the story gets even worse! Two editors of ham radio
>publications have attacked LARC in print, one as recently as
>in the September, 1993 issue of his magazine!

Go ahead, name names. Who besides Wayne Green?

Ah yes, a common technique of folks who can not defend their stance is
to try to strike out offensively with empty accusations.

>
>>Jeff NH6IL (back in the days when we only kissed our pets: WA6QIJ)
>
>Methinks the lady doth protesteth too much... *snap*
>
>Moo
>--

I didn't bring the subject up - someone else did. Just because I don't
back down like those who are in tenuous positions must doesn't mean I
have an overwhelming pre-occupation with the topic. If you're going to
try to force YOUR pre-occupation with it upon us, then I'll certainly
react. Months ago you were forcing the issue upon us; I only reacted then.

One very important point I would like to make to everyone is I hate
no one; but I can dislike a person's actions or activities.

Jeff

P.S. My mailbox has been flooded with the funniest responses! Thanks
everyone. The silent majority speaks! (I think Nixon said that...)

Magnetics from your old 520 had nothing to do with your furnace relay.
RF actuated it. No magnetics would escape the case.

Gary

I read the post by Jeff Herman. Read the above post and read
Mr Herman's post again. I fail to see the word homosexuality or any
euphemisms, code words, slang phrases concerning homosexuality in Mr
Herman's post. I did see many references to bestiality though. I
didn't know they were the same thing.

Thanks for enlightening me. I learn new stuff all the time.
Wait till I tell my mother, she will be fascinated.

Hello Marc.... I've got the NC-15 and the WW batteries as well.

Try cleaning the contacts on both the battery and the charger.
I know, you already did. Try a rubber pencil eraser, if you
haven't already.

If that doesn't do it, then e-mail me your voltages and I'll
measure mine to campare them to.

Alan

3811. This loving community of hams...

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-17 06:55:39 UTC
From: n7949188@henson.cc.wwu.edu
Message-ID: <1993Oct17.065539.24304@henson.cc.wwu.edu>
Source record: 274789

One of the things that has always attracted me to amateur radio is the fact that although we may be very different on politics, religious belief, sexual orientation, ethnicity, and just about anything else, we could be friendly and respectful of one another. In the terms of the Quakers, it's being able to "see the light of God within each person." For the most part, I still see this spirit of acceptance or at least tolerance. Some choose to not enter into the distasteful squabbling, while others try to shed gentle reminders of our higher purpose. Yet others seem to have been waiting for this opportunity to express their disrespect if not hatred toward other hams and citizens.
I share the sentiment that letting all hams communicate, including placing ads in our various publications, is respectful and appropriate. It is certainly not forcing the rest of us to do anything. Whether you are turned off by boring QSOs, slow speed CW, high tech jargon, or personal information about hams - it's _your_ problem, not their's - and should remain with you. It's the reactions that are becoming the blight on our hobby more than the initial posting or ad. Let's remember we are here _primarily_ for amateur radio but if that's all we ever can talk about we are being unnecessarily limited.
In peace,
John Hatten

:
: No, I'm not holding my breath waiting for it. :-)
:
: Stephen

My frequency hopper will beat your ss any day. Makes fm seem like cw ;)

This is not the band for clueless techs...the new technology is here, lets use it. If you want to talk fm stay on 2meters. This is the only band where the new modulation techniques are primary. We can use it but we are forth in line and may not cause interference to those commercial users who have allways had higher standing. What are they doing? ss and hoppers.

Part 15 devices are just below us in the pecking order. Those devices can run up to one watt in ss mode. How would you like one of those on the input of your fm repeater? Why not join em?

3814. Re: Looking for Memphis area hams

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-17 07:55:45 UTC
From: James Phillip Pickens <PPICKENS@delphi.com>
Message-ID: <931017.10545.PPICKENS@delphi.com>
Source record: 274788

Craig,

I am located in Memphis and work for FEDEX. I pass my tech exam bout 5 weeks
I have a Ten-Tech which I am
not able to use until I upgrade but working on my code 2 to 3 hours each day.

I am very interested in getting to know other hams in the Memphis area.

Drop me a line sometime.

Phil

3815. Re: magnetic fields from gear

>I am thinking about getting back on the air after a ten year absence.
>I am a bit concerned about magnetic fields coming off my gear. My old
>TS-520s used to throw a relay on my furnace a full 30 feet away from the

That was from the RF field. No way you could have had a magnetic field that strong. Most of the stuff about low level emf is jsut that, low level garbage without a shred of scientific proof. You go ahead and worry, I won't. You can't avoid it in any case so why worry about what you can't change. You can run but unless you go to a desert island you can not hide.

>Great! Thanks. But, what about tones A-D?

Ah, well if you need those, you have to find one of the data entry
pads, or buy one of the aftermarket pads. BTW I'm told the model
number of the WE phone is 2500. The 500 was rotary dial.

Gary

>abusive of batteries.
>
>Gary

That seems to be the recommendation I have heard. A friend of mine bit the bullet and bought one. One thing I was looking for instead, but have had no luck remembering where I saw it, was a universal desktop charger that had replaceable sleeves for the different types batteries. It seems like a great idea.

Who knows, maybe I'll just give up and pay the $100.

Thanx!

Robert

> Months ago you were forcing the issue upon us; I only reacted then.

It was the ARRL that forced the issue by taking a position which LARC and
others believed was contrary to Connecticut state law.

>P.S. My mailbox has been flooded with the funniest responses! Thanks
>everyone. The silent majority speaks! (I think Nixon said that...)

And you're about as correct in this issue as he was in Watergate.

Nothing in QST brought it up. The W5YI Report (a good newsletter, I think) printed a letter by Jim Kelley, president of LARC, to Wayne Green, editor of 73 magazine, and Newsline broadcast #842 redistributed the story. Newsline is carried in rec.radio.amateur.misc in printed form.

I thought Jim Kelley's letter was somewhat intemperate, but probably appropriate for Wayne Green. On the other hand, if he addressed the ARRL in the same tone, I can see how they might not react well. Good as entertainment, perhaps not so good as a way to start a policy debate.

>of SCA-broadcasting stations?
>
>73...Jim
>N2VNO
Unfortunately I don't think anybody has compiled a comprehensive list. I am having a hard time even finding a replacement for Vane A. Jones's North American Radio and Television Guide which is out of print due to the death of the author. I had compiled a list for the New York City metro area where just about every other station has an SCA carrier. I find the most interesting one to be WQCD-FM (formerly WPIX-FM) on 101.9. On 67Khz they transmit "elevator music" and on 92Khz they transmit "adult contemporary". A rather interesting mix. There is also reading for the blind on at least one station and many stations have Korean and Japanese language programming.

Walnut Creek has the "QRZ!" CD-ROM for about half Buckmaster's price. It has the call book data base from about March '93. I havn't tested the included data retreival program (I don't have an IBM) but the data files are comma delimited and easy to deal with with GREP or your favorite Data Base program. There are four copies of the base each sorted in different ways. About 50 Megabytes each. I was easily able to pull off all the Michigan calls into a separate file for SuperBase.

Walnut Creek is at 800-786-9907. I am a satisfied customer only. They seem to specialize in CD-ROM snapshots of Internet archive sites.

Decay rate: 1.19475e-03 rev/day~2 NASA Johnson Space Center
Epoch rev: 2
Checksum: 331

Space Shuttle Columbia's planned launch has been postponed until Monday,
18-OCT-93. The scheduled launch time begins at 10:53 EDT. One of 2 S-Band
transponders used for air-to-ground communications failed during pre-flight
checks on the second launch attempt 15-OCT-93. Engineers reported a solid
state failure in the receiver unit. Also contributing to the delay was the
lack of favorable weather conditions.

STS-58 Shuttle Amateur Radio Experiment (SAREX) Information Sheet:

Mission: STS-58 Space Shuttle Columbia
Spacelab Life Sciences-2 (SLS-2) Mission

Launch: October 18, 1993, 14:53 UTC

Orbit: 39 degrees orbital inclination

Mission Length: 13 days (Nominal)

Amateur Radio
Operators: Bill McArthur (KC5ACR), Marty Fettman (KC5AXA),
Rick Searfoss (KC5CKM)

Modes: FM Voice
Prime callsign KC5ACR

Packet Radio
Callsign W5RRR-1

Frequencies: All operations in split mode. Do not transmit on
the downlink frequency of 145.550 MHz.

Voice Freqs: Downlink: 145.55 MHz (Worldwide)
Uplinks: 144.91, 144.93, 144.95, 144.97, 144.99 MHz
(Except Europe)
144.70, 144.75, 144.80 MHz (Europe only)

Note: The crew will not favor any specific uplink
frequency, so your ability to work the crew will
be the "luck of the draw."

Packet Freqs: Downlink: 145.55 MHz
Uplink: 144.49 MHz

SB SAT @ AMSAT $ANS-289.02
AO-13 ECLIPSE SEASON APPROACHES

HR AMSAT NEWS SERVICE BULLETIN 289.02 FROM AMSAT HQ
SILVER SPRING, MD OCTOBER 16, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-289.02

G3IOR Provides Information About Sun/Moon Eclipses For AO-13

During the course of the year as AO-13 makes its way around the Earth in its highly elliptical orbit, there will be a few Earth-Moon-Sun "geometries" which will cause AO-13 to experience either partial or complete darkness because of the Earth or the Moon obscuring AO-13's view of the Sun. For most "Low-Earth-Orbiting" (LEO) satellites, many OSCAR users are aware that they experience eclipes daily for varying periods during each orbit. But for AO-13, these eclipse periods come only during certain times in the year and not only are Ground Controllers aware of these times, but every user of AO-13 should also be aware of the eclipse seasons. G3IOR predicts that the next lunar eclipse will occur on 13-NOV-93 beginning at 13:33 UTC and ending at 15:13 UTC. AO-13 will not experience total darkness during this lunar eclipse since the Moon will only obscure AO-13 from the Sun by 89% at its peak. The peak of this eclispe, or the maximum darkness, will occur at 14:16 UTC. For those AO-13 telemetry gathering enthusiasts, you can monitor the General Telemetry Beacon on a downlink frequency of 145.812 MHz or 2400.646 MHz. Only stations on the west coast of the U.S., Pacific, Australia, and Japan will have visibility to AO-13 during this lunar eclipse. Since most of this lunar eclipse will happen during a Mode-S transponder period, there will be no adjustment made to the transponder schedule. G3IOR says that this is because Mode-S draws very little power during its operation. Using any recent set of keplerian elements in InstantTrak V1.00b, it appears that at 13:33 UTC the Mean Anomaly (MA) count for AO-13 will be 171; at the peak of the lunar eclipse (89% obscuration) at 14:16 UTC the AO-13 will be at MA 187. The end of the eclipse will be around MA 209 at 15:13 UTC on 13-NOV-93. This puts the start of the lunar eclispe in Mode-BS, then the rest of the eclipse period either with the Mode-S transponder in operation or Mode-S beacon only operation. Those wishing to collect telemetry should be prepared to move to Mode-S during this period. Please take note of the following AO-13 transponder operating schedule which covers the lunar eclipse period:

M QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 Oct 25-Nov 15
Mode-B : MA 0 to MA 130 !
Mode-BS : MA 130 to MA 180 !
Mode-S : MA 180 to MA 205 !<- S transponder; B trsp. is OFF
Mode-S : MA 205 to MA 210 !<- S beacon only
Mode-BS : MA 210 to MA 226 ! Blon/Blat 210/0
Omnis : MA 240 to MA 80 ! Move to attitude 240/0, Nov 15
Please don't uplink to Mode-B between MA 180-205 as this interferes with Mode-S transponder operations.

As far as situation where the Earth blocks the Sun from AO-13, these solar eclipses will begin on 07-DEC-93 and continue until 24-DEC-93. Because the length of eclipse periods can be quite long, a special transponder schedule

will be implemented during this time period. The following schedule is designed to take these solar eclipse periods into account.

L QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 Nov 15-Jan 31
Mode-B : MA 0 to MA 95 ! / Eclipses, max
Mode-B : MA 95 to MA 180 ! OFF Dec 07 - 24. < duration 136
Mode-B : MA 180 to MA 220 ! \ minutes.
Mode-S : MA 220 to MA 230 !<- S transponder; B trsp. is OFF
Mode-BS : MA 230 to MA 226 ! Blon/Blat 240/0
Omnis : MA 250 to MA 150 ! Move to attitude 180/0, Jan 31
Please don't uplink to Mode-B between MA 220-230 as this interferes with Mode-S transponder operations.

G3IOR encourages those who wish to monitor a particular telemetry parameter during these solar eclipse periods, should let him know since he will make sure that parameter is part of the Whole Orbit Data (W0D) collection facility.

[The AMSAT News Service (ANS) would like to thank James Miller (G3IOR) for the information which went into this bulletin item.]

/EX
SB SAT @ AMSAT $ANS-289.03
AMSAT OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 289.03 FROM AMSAT HQ
SILVER SPRING, MD OCTOBER 16, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-289.03

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955 MHz.

Date UTC Mode Phs NCS Alt NCS

23-Oct-93 1315 B 154 WB6LLO WA5ZIB
30-Oct-93 1300 B 62 W5IU WB6LLO
13-Nov-93 1230 B 146 VE2LVC W5IU

Any stations with information on current events would be most welcomed. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations, are encouraged to join the OPS Nets. In the unlikely event that either the Net Control Station (NCS) or the alternate do not call on frequency, any participant is invited to act as the NCS.

****

Slow Scan Television on AO-13

SSTV sessions will be held on immediately after the OPS Nets a downlink on a Mode-B downlink frequency 145.960 MHz.

/EX
SB SAT @ AMSAT $ANS-289.04
WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 289.04 FROM AMSAT HQ
SILVER SPRING, MD OCTOBER 16, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-289.04

Weekly OSCAR Status Reports: 16-OCT-93

AO-13: Current Transponder Operating Schedule:
L QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 Aug 25-Oct 25
Mode-B : MA 0 to MA 90 !
Mode-BS : MA 90 to MA 120 !
Mode-S : MA 120 to MA 145 !<- S transponder; B trsp. is OFF
Mode-S : MA 145 to MA 150 !<- S beacon only
Mode-BS : MA 150 to MA 180 ! Blon/Blat 180/0
Mode-B : MA 180 to MA 256 !
Omnis : MA 230 to MA 40 ! Move to attitude 210/0, Oct 25

M QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 Oct 25-Nov 15
Mode-B : MA 0 to MA 130 !
Mode-BS : MA 130 to MA 180 !
Mode-S : MA 180 to MA 205 !<- S transponder; B trsp. is OFF
Mode-S : MA 205 to MA 210 !<- S beacon only
Mode-BS : MA 210 to MA 226 ! Blon/Blat 210/0
Omnis : MA 240 to MA 80 ! Move to attitude 240/0, Nov 15
Please don't uplink to Mode-B between MA 180-205 as this interferes with Mode-S transponder operations. Reorientation from Attitude 180/0 to 210/0: A magnetorque will be initiated on Orbit #4105 MA 224 [Oct 24 @ 03:48 UTC] and will be executed over 4 perigees, completing on Orbit #4109 MA 32 [Oct 25 @ 17:00 UTC]. The new schedule, as per M-block, will be invoked Orbit #4109 MA 140, and thus that orbit (only) will contain two Mode-S sessions. Continuous up-to-date information about AO-13 operations is always available on the beacons at 145.812 MHz and 2400.646 MHz in CW, RTTY and 400 bps PSK. Also, these bulletins are also posted to INTERNET, ANS bulletins, Packet, PACSATs, etc., and can also be found in many international newsletters. [G3RUH/DB2OS/VK5AGR]

AO-16: Operating normally. [WH6I]

UO-22: Operating normally. [WH6I]

KO-23: Up and running. Busy as usual. The images are no longer available. [WH6I]

KO-25: Has been in "TICK" mode lately. [WH6I]

RS-12: W9CGI reports that he had his first satellite contact through RS-12 a couple of weeks ago on Mode-K, i.e., 15M uplink and 10M downlink. He

reports that he made about 4 contacts altogether, on two different passes. W9CGI would appreciate any ideas/filter or thoughts, etc. from any other RS-12 users on how to keep the 15M uplink out of his 10M receiver so that he can run duplex like any other mode bird. He uses a Yaesu FT990 at about 10W on 15M uplink to a Cushcraft R5 vertical. For the downlink he has a vertical J-pole about 60 ft from the R5 antenna and then inside he uses a HF converter in the FT726 transceiver. The FT726 is of course his normal Mode-B rig. W9CGI says that he is finally finding time to get back on the birds so he is looking forward to making many contacts.
[W9CGI @ N5AAA.IN.USA]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

3832. Please help identify this part

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-17 19:22:28 UTC
From: ken@hart.Princeton.EDU
Message-ID: <1993Oct17.192228.4218@Princeton.EDU>
Source record: 274812
Cross-posted to: rec.radio.swap,rec.radio.shortwave,rec.radio.amateur.misc

Can you identify this:

It's a black plastic (bakelite?) adapter about
1"x2"x2.4", with two miniature tube sockets on
top, each holding a 12AX7 miniature (9-pin)
vacuum tube (each a twin-triode). At the base
there's an octal socket. Crude picture:

```
^ ^
| | | |
| | | | 12AX7`s, partly submerged
--------------
| |
| |
| | plastic
| |
| |
| |

-------------
| | | | octal socket
```

On one side it says
"GAP/R Model K2-W"

On the other it says
"Made in U.S.A. By
George A. Philbrick Researches, Inc.
230 Congress St.
Boston 10, Mass."

I suspect it's a plug-in flip-flop. That would be nice
to show my class, because they've asked how a computer
could fill a whole room.

Please reply by e-mail. If I get solid information
I'll summarize to the group.

Thanks, ken.

Geez, and I'm trying to make do with just 5 watts. The only 50Kw folks I know of on the ham bands are those *&%$#@ broadcasters on the 40 meter novice subband (and above); even our own VOA is on 40 (I do respect the VOA's mission and its service is vital to many areas of the world but why broadcast on 40 meters?).

Jeff NH6IL (back in the days when no one could afford a KW: WA6QIJ)

SB DX @ ALLBBS $OPDX.131
Ohio/Penn DX Bulletin No. 131

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 131
BID: $OPDX.131
October 18, 1993
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL, DL1SBR, IK6GZM, SM5DQC, VP2ML & The DX Bulletin, AD1C, NA2M, WD3Q, AC4NJ, K4CEF & Southeastern Cluster Group, N5HD, KK6H, KA6V, K8JP, NH6ZW/N8, AA7MH, AA9GR and WA0RJY for the following DX information.

3B9, RODRIGUEZ ISLAND. Robert, 3B8FR, has returned after a 2 year absence (because of his wife's illness on Mauritius) to operate as 3B9FR on both CW and SSB. He only has an antenna for 12/17/30 meters at this time. Robert plans to be active on the other bands once he has the antennas, and he will also be on 40/80 meters using wire antennas. Robert has also requested stations that made contacts with 3B9FR in 1990 and 1991, to PLEASE re-QSL to 3B8FR CBA. Check the 12 meters between 1330-1630z, 17 meters between 1700-1900z and 30 meters 0130-230z.

3X0, REPUBLIC OF GUINEA. 3X0DEX has been quite active lately on RTTY. Check around 7043 and 14084 kHz between 2300 and 2330. There has also been SSB activity on the lower bands. Check 7060 kHz around 2130z and 75 meters around 2330z. QSL to Box 104, F-22650, Ploupalay, France.

3Y, PETER I ISLAND. (UPDATE) A couple of late breaking developments have taken place and have been reported by Tony, WA4JQS. First, K0IR has just returned from a trip and he will be publishing an update very soon on happenings for the Peter I trip. Secondly, a new operator has been added to the team. He is Bob, Wilber, N4GCK (a.k.a HI3RW), and he is an excellent CW operator. They are still looking for one more good CW operator. Please contact the team leader, K0IR, Ralph Fedor, 3437 Granite View Dr, St. Cloud, MN 56301 for details. Thirdly, Tony got a call from K7HDK and he will be supplying satellite gear for the trip, so they will definitely be on AO-13.
Joanie, KA6V, reports donations for the Peter I DXpedition are still needed. Donations can be sent to AA6BB, Jerry Branson, 93787 Dorsey Lane, Junction City, OR 97448. Donations of $50 or more will receive a copy of "Where Do We Go Next?" by Martti Laine, OH2BH.

Due to work commitments in Hong Kong, Martti cannot join the team on Peter I Island. However, he has graciously offered to be part of the support team and has given permission to offer his book to those that help in donations. The team will use Martti's operating guidelines on Peter I as they did on South Sandwich Is. Martti is supporting the team 100%. Look for Martti Laine soon signing VR2BH from Hong Kong. He will be in southeast Asia for about 2 years and possibly operating from other locations. QSL via KA6V.

4W, YEMEN (MORE). Paul, KK6H, one of the leaders of the possible 4W DXpedition, wrote to OPDX to clarify what is taking place. He states it is true that he has "dropped out" of the Yemen DXpedition for the reasons stated in last week's bulletin in hope that a "withdrawal announcement" (released August 7th) would enable Otto (UA4WAE) and others to secure permission from the Yemenis, thus allowing the DXpedition plans to go forward. Paul's last communication with Otto was mid-August and he indicated that he would continue to seek a license and operating permission, but he expected delays. Otto said that he would attempt to go to Yemen "perhaps in March". Since Paul has not received any type of communications with Otto since then, he has no recent information about the status of 4W1UA. However, Paul suspects that the rumors of an October 15-24, 4W operation may have started as the result of an item which appeared in the October issue of CQ Magazine. Unfortunately, the "Upcoming DXpedition" information on page 113 was submitted for publication PRIOR to the August 7th announcement and because of the publication "lead time", the information could not be corrected. So to the best of Paul's knowledge, the October 4W DXpedition was effectively cancelled on August 7th, and it remains for UA4WAE to re-schedule the trip for some future date.

BV9P, PRATAS ISLAND. Samuel Liu, BV4VB, the petitioner for DXCC country status for Pratas (Dong-sha Dao), was a guest speaker at the North Jersey DX Association meeting on Friday, October 8th. Samuel showed a video of Pratas Island that convinced even the skeptics that Taiwan is the owner and occupier of the island. During Samuel's talk, he made the following three points:
1. Aliens are not permitted on the island. This means non-Tawiwan citizens such as OH2BH, OH2DO, K7JA and N4VA can not land on Pratas Island. Samuel suggested that they write to the CTARL and the PTT in Taiwan and request permission to participate in the operation for training purposes. (ed. Interesting Note: Back in September it was reported that these four operators have submitted to the Defense Department for clearance, but no word on their acceptance.)
2. The Chinese Taipei Amateur Radio League is looking for experienced Taiwanese operators for Pratas. They are training some of the less experienced operators on pile up handling. They do not want to be embarrassed by their operators inability to control the callers.
3. The earliest operation will be in November 1993, or when they feel their operators are ready.

By the way, Samuel Liu is a medical technology student at St. Johns University in NYC and is also licensed as N2TAX. He is a user on the

TriState Packet Cluster when he finds time from his studies.

CN, MOROCCO. Jack, WA0RJY, will be operating in the CQ WW SSB Contest from the club station of the Association Royale des Radio Amateurs de Maroc in Rabat. Their call sign will be CN2JF and they plan to be active on all bands using a 100 watts. QSL via WA0RJY (CBA 92 or later).

ET3BH QSL CARDS. Osten, SM5DQC, informed OPDX that the QSL route for Bertel's (SM3HLL) ET3BH operation is not to his CBA (although they will probably be answered as soon as Bertel returns to Sweden), but for now QSL via SM3EVR.

9U5DX QSL ROUTES. All CW/SSB contacts go to DJ6SI. All RTTY contacts go to DJ6JC. REMEMBER: Postage is more than a green stamp in Germany.

II6I, ITALY. Luke/IK6GZM, Maurice/IK6BSN, Bert/IK6CLX, Serge/IK6FJV, Pino/IK6MLI, Robert/IK6OFF, Luigi/IK6JBA and Rino/IK6FFL will be active during the CQ WW SSB Contest as Multi/Single. Activity will be on 160-10 meters and a special QSL with photo of all the operators will be sent via the bureau or send direct to QSL Manager IK6GZM.

KH4, MIDWAY ISLANDS. The following was passed on to OPDX and was written by Bob Cunningham (ed. Do not know if he is amateur!): Midway Island Naval Air Facility will be officially shut down today (Oct. 4th), 5-6 years of Navy cleanup will follow before it's turned over to the U.S. Fish & Wildlife Service. Actually an atoll with two principal islands (Eastern and Sand), since WWII Midway has been a combined support base for Navy aviation units, communications station, and wildlife refuge. Roughly 1,300 miles northwest of Honolulu, Midway is near the far end of the Hawaiian Island chain. It's best known as the site of the Battle of Midway, June 4-6, 1942, when a Japanese invasion fleet attempted to seize the island to use as a base for the invasion of Hawaii, but were turned back-- losing several major aircraft carriers.
Meanwhile, the DXB reports, Scott, N7TNL, will be active from here October 21 thru January 6. Activity will be mainly on CW with some SSB activity. Be looking for him on 160-10 meters (including the WARC bands) on CW - 36 kHz from band edge, 18096 and 24896 kHz / on SSB - 7096/7236, 14236, 18135, 21336, 24936 and 28336 kHz. QSL via W1OO or via the W7 bureau.

OT, BELGIUM. Operators ON4UN, DJ4AX, ON6TT, DL1SBR, ON4WW, F6EXV AND DK1FW will be active from ON4UN's QTH using the special call sign of OT3T in the CQ WW SSB Contest (Multi/Single category). QSL via bureau or via ON4UN.

P29, PAPUA NEW GUINEA. Eric, WD3Q, expects to be active for 7 to 10 days beginning December 1st. He will be running low power (Yaesu FT-890 and wire antennas) and will operate on the WARC bands only. More details will follow later.

QSL CARDS UPDATE.
N9NS/KH5K and N0AFW/KH5 cards. (ed. This report got by me last week,

sorry!) Mike, N9NS, states the cards for the KH5K operation is past the half-way point. He has less than 7000 cards yet to process and they should be done by the end of the October. Cards for the KH5 operation should be coming out by the end of the month also. Mike is beginning to get a lot of "second requests" and he is requesting to hold off on the "second requests" until they announce that the first pass through the cards has been completed.

VK9MM cards. Bill, VK4CRR, was heard saying that the VK9MM cards should be out around December 1, 1993 and they hope to have 13 photos on the QSL cards. Bill also stated that he and friends are planning on another BIG DXpedition (some think it maybe VK9/H).

4U1UN cards. Several members of the Northern Ohio DX Association (including your editor) processed about 700 cards this past weekend which will be mailed out October 18th.

9G1AA cards. Cliff, AC4NJ, informed OPDX that the last of these cards (506 cards) will arrive sometime during this week to be mailed via stateside. If you have not sent for these cards yet, send a SAE (thats right, SAE and no green stamp needed) to PA3AWW.

9M0S cards. John, W4FRU, now has all the cards from the printer and all the QSO labels are made. Processing of cards has begun.

VP2E, ANGUILLA. Members of the Central Arizona DX Association, Shep/AA7MH and Bill/N7OTQ (VP2ETQ) will be active from here beginning November 18th to the 23rd. Activity will be mostly 18 MHz CW/SSB/RTTY and 10 MHz CW/RTTY. QSL to Harwood Shepard, POB 42346, Phoenix, AZ 85080.

VP5, TURKS & CAICOS ISLANDS. Joe, K8JP, will be active as VP5/K8JP from October 16-23. He will concentration mainly on CW on 160/80/40 meters and the WARC bands. QSL via K8JP's CBA of Indiana.

ZD9, TRISTAN DA CUNHA. (BAD NEWS!) Roger, G3SXW, now active as ZD9SXW, will not be operating 160 meters due to severe damaged done to his GAP antenna by storms. The antenna is almost bent in half. He will be trying to repair the antenna for 80 meters, but for the time being he will be using an inverted "VEE". Roger says he has made about 80 QSOs on the "Top Band".

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Kenneth E. Harker (kharker@bnr.ca) wrote:
: I was in Radio Shack briefly the other day, and I noticed something
: that surprised me. RS is now selling a UHF radio that operates in what
: I presume is a new band.

GMRS is another section of Part 95 which also includes Radio Control
and Citzens Band. Sometimes called Class A CB, where 27 MHz is called
Class D, both for the respective subparts of the regulations. I believe
it predates the 27 MHz service.

>
This makes two assumptions: that it's only a few milliwatts, and that it's on a "wrong" frequency. The LO of an FM broadcast receiver using high-side injection operates -- and radiates -- between 98 and 118 mHz. 108 to 118 mHz is allocated to radionavigation, and the first 3 mHz of that is used for high-precision operations. A few milliwatts is going to from a source a few feet away from the antenna will look awfully strong compared to the real signal, which might be from a source 20,000 times farther away.

Most LOs aren't going to be radiating even a few milliwatts, but if you use a transmitter, it'll be putting out more than a few milliwatts, and unless it's _completely_ clean, it may well be putting out power at some frequency that's important to navigation. I distinctly remember the case of a ham here in Phoenix who spent a week proudly announcing that he had acquired one of the new synthesized 2m rigs (it was a something-2000, I think -- the company is no longer in business), and then disappeared from the air. The organization that shut him down was the FAA, not the FCC! (Though presumably, the FCC came along later.) This radio had a 500mw spur (the ham said later) at around 108mHz, which, coincidentally, is where the Phoenix airport's instrument landing system lives.

So you're half right: clean, properly operating radio equipment poses no threat to radio equipment on an airliner (assuming that it's not powerful enough to simply overload the aircraft radio's front end). But random

equipment brought on board by passengers can't be trusted to meet the same standards as the aircraft's own radios do. Hence the restriction.

Incidentally, aircraft radio equipment isn't just shoved into a slot with some coax leading to a convenient hole in the fuselage. Every installation is tested to make sure that the new radio doesn't interfere with any other equipment. This isn't just a cursory turn-it-on-and-see check -- in some cases, it involves making field strength measurements all over the skin of the aircraft.

Now put yourself in the pilot's position. You're supposed to be landing the airliner. You look out the window and see nothing but gray. Your altimeter tells you you're heading down at 900 feet per minute, and you know that there are mountains around here somewhere. The only thing that tells you you're in the right place is a pair of needles on a small dial. The ground is coming up here pretty soon... isn't it? Am I too low? Did I set the frequency right? What if the indications that tell me the instrument is working are wrong? What can I cross-check this thing with? I'm only 250 feet above the ground -- I think! -- and I still can't see a thing...

Add to that "I wonder if the guy in 12C with the handheld radio is screwing things up..." It's amazing how much less faith you have in a radio when it's the only thing between you and "Film at 11!"

There is an ad in QST and other ham magazines that says "CB TO 10 METERS"
from a guy in Arizona. He sells manuals on how to convert each
of the popular models of CBs. He also has lists of which CBs cannot
be converted and which can. I have found his material to be useful.

3839. Ham Radio Mail/UUCP/FTP Software Archive & Callsign Server @NS.RISC.NET

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-17 23:28:11 UTC
From: phil@multiop.com
Message-ID: <199128b121a93@multiop.com>
Source record: 274819

```
* RISC.NET Ham Radio Server *

RISC.NET has established a series of services which all radio amateurs can
access. These services currently include access to the Buckmaster CD ROM
public domain files in addition to the Buckmaster callsign database.

Additional information can be obtained by writing to: root@ns.risc.net

This file contains information on:

1. Accessing RISC.NET's callsign database
2. Accessing RISC.NET's public domain shareware database

==============================================================================
1. ACCESSING THE BUCKMASTER CD-ROM CALLSIGN DATABASE

The Buckmaster Callsign Database is accessed by logging into a special account
called "hamradio". From this account, you can access the Buckmaster CD-ROM
callsign database (only the US calls at this point, as the international
database is encrypted and Buckmaster will not provide the key so we can
create a UNIX version of their ICALL.EXE program - if anyone knows how to
decrypt this data, please contact us!) or you can TELNET to the Buffalo or
NJIT callsign databases.

Procedure:

Telnet or rlogin to "155.212.2.2" (or, "ns.risc.net")
Login with user-id "hamradio". No password is required.

At this point the system is self-explanatory.

==============================================================================
2. ACCESSING THE BUCKMASTER CD-ROM PUBLIC DOMAIN SHAREWARE

The Buckmaster PD Software Library can be accessed in one of the following
manners: UUCP, FTP, or Mail-based archive server. A complete list of all
files available for transfer may be obtained by retrieving file:

!~/ham-radio/mascd.dir

------------------------------------------------------------------------------

Anonymous UUCP Information:

Telebit Trailblazer Plus Dial-In: 1.401.455.0347
9600 to 300bps v.32/v.42 Dial-In: 1.401.331.3706
ns.risc.net!login: xxcp
Password: xenix
```

To download a file, issue the following uucp request on your machine:

uucp anomaly!~/ham-radio/files/<filename> yoursite!<to-filename>

All files are stored in /usr/spool/uucppublic/ham-radio on RISC.NET's
Archive.

To request the master list of ham-related files, uucp as follows:

uucp anomaly!~/ham-radio/mascd.dir yoursite!yourname

Mail-based Archive Server:

To answer the interim demand of people on the Internet who wish access
to the ham radio files, we have established a mail-based server which can
process requests for files. Note that in order to keep our SMTP connection
from getting bogged down, we only process *5* megabytes worth of software
requests PER DAY. Users with alternative means of obtaining files are
encouraged to do so.

To receive instructions on how to use the mail-based archive server, send
an e-mail message to "snarf@ns.risc.net", with a Subject: of 'snarf'
and the following two lines starting in column 1:

snarf address [your e-mail address]
snarf help

For example:

snarf address wb9aaz@gello.pcb.org
snarf help

These commands will forward a help file to your reply address. This help
file contains all information you require on how to obtain software listings
and uuencoded mailings of archive contents.

To receive a 104k detailed description of all ham files in the archive,
include the following line in the body of your message:

snarf send ham-radio/mascd.dir

Note that if you do not have an address line, or you have other errors in the
body of your text, you will not get a reply from the server.

Zmodem/Ymodem/Xmodem/Kermit/Sealink:

All files can be accessed from RISC.NET's "bbs" login, for those users without
UUCP or FTP access. Validation is required to access the file sections,
though, so on your first call leave a note in FEEDBACK stating that you're
calling to download from the ham-radio archive, and we'll see that you get an
special access account.

FTP Access:

Our IP Address is: 155.212.2.2! Or, for those of you with Nameservers, try "ns.risc.net"! As with our SMTP connection, the number of FTP users we allow on our link is also limited to prevent net-congestion. If you receive an "all ports are currently in use" message, please try again later. Login using anonymous FTP account "ftp", and your e-mail address for a password!

You are nauseated by a class of PEOPLE, by HUMAN BEINGS as you are by feces or
vomit??!?

Then stop obsessing about what they do in the bedroom.

Get some help! What they do is none of your business.

This comparison of a minority group to vomit or feces reminds me
of some quotes I found recently:

Adolf Hitler, quoted in "Hitler", by Joachim Fest, Vintage
Books Edition, 1974, p. 679:

Nature is cruel; therefore we are also entitled to be cruel. When I
send the flower of German youth into the steel hail of the next war
without feeling the slightest regret over the precious German blood
that is being spilled, should I not also have the right to eliminate
millions of an inferior race that multiplies like vermin?
^^^^^^^^^

Speech by Reichsfuehrer-SS Himmler at Kharkow, April 1943
[Nazi Conspiracy and Aggression - Washington, U.S Govt. Print.
Off., 1946, Vol. IV, p. 572]

We have - I would say, as very consistent National Socialists,
taken the question of blood as our starting point. We were the
first really to solve the problem of blood by action, and in

this connection, by problem of blood, we of course do not
mean antisemitism. Antisemitism is exactly the same as delousing.

Getting rid of lice is not a question of ideology.
^^^^^^^^^^
It is a matter of cleanliness.

At least the Nazis only referred to the objects of their
obsessions as lice or vermin, not feces or vomit.

Any other groups besides homosexuals cause you as much annoyance?

3844. More Dual Band HT advice needed

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-18 01:24:18 UTC
From: kanderso@huey.csun.edu
Message-ID: <1993Oct18.012418.20780@huey.csun.edu>
Source record: 274702

I'm looking to purchase a new Dual Band 2m, 440 HT and need some advice. I do about 60% on the belt (pedestrian mobile) operation, 30% in the car and 10% on bicycle. About 50% of the time I use repeaters and 50% on simplex. So any new HT I get will need good receiver sensitivity. Needed features would be a high capacity battery pack, extended receive, CTCSS, DTMF, DTMF tone-squelch and lots of memories. The possibility of getting extended transmit in the future with a modification would be nice. Currently I own a Radio Shack HTX-202 and an Icom 02AT both of which I like very much. Right now I'm thinking of getting the Icom W2A. I've operated and don't really like the Yeasu FT-470. The two problems I have with the FT-470 is the lack of an external power plug and the small, almost unusable, top control knobs for volume and squelch. I hear good and bad things about the Kenwood TH-78A, mostly good. I have never used one but I don't really like Kenwood's, everythings an option policy for their equipment. Also never seen the Alinco DJ-580, how is it? Also it would be good to know which of the above HT's have documented or undocumented "soft" mods that I should know about. Any info or comments on the above HT's or one I haven't listed would be appreciated.

>Can someone just tell me what page in Sept issue got this whole thing
>going (again).

I'm not sure, but LAMBDA got on Wanye Green's s**t list not because
they are adovcating certain sexual behaviour.

They got there because the ARRL refused (for what reason is now
unclear, but it I heard that the ad request was received after that
issue's deadline), LAMBDA sued, and when the ARRL "relented", LAMDA
refused to drop their suit claiming that the ARRL damaged them.

Seems like a publicity grab or a way to get cash from the ARRL to me.

IMHO, the problem is that LAMBDA changed from an organiztion that
advocates sexual minorities to an organization that advocates
frivolous law suits.

>idea.

I got one from W&W associates. It works fine. It should NOT be used for batteries that do not have an internal thermal limit switch. That said, I note that I use it for all my HT batteries.

When I ordered my charger I asked for old and new style ICOM cups. I received the charger in a box marked that it had the new style battery cup and the extra old style cup. When I opened the box, it had an old style cup in it. I called W&W and they sent me the right cup and told me to keep the extra one.

I also had a battery of theirs go bad. When fully charged it would stop working if you pressed a "magic" spot. As it discharged, it would stop if you put any pressure on it. I sent in back and they sent me a new one.

>Who knows, maybe I'll just give up and pay the $100.

It was about $80 if I remember correctly.

The only complaint I have is that it uses an external transformer. So I must unplug it after each use and plug it in again when I need it. I would prefer an internal charger and a real on/off switch.

3847. Transmission Line Losses

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-18 02:22:43 UTC
From: kg7bk@indirect.com
Message-ID: <kg7bk.750910963@indirect.com>
Source record: 274823

>Note that only components of input end SWR and matched line loss
>are needed to obtain total loss. That's because load end SWR is
>uniquely defined by those same components.
>Gary Coffman KE4ZV

Gary, my point is that "matched line loss" is almost always an assumption, not a measurement. I use 9913 coax on my uhf antenna and got S9 reports from 40 miles away when I installed it and it had a 1.8/1 SWR. A few weeks later my reports dropped to S7. My SWR was still 1.8/1. My coax was still 9913 but now it contained a little water. Mother Nature quite often makes a mockery of our assumptions.

If someone switched my 50 ohm antenna with a 50 ohm dummy load, I would not be able to tell it by an SWR reading. I maintain that the only way to know how much RF energy is being radiated is to measure the RF energy.

My two cents for what it's worth. If I want to join a QSO, I drop my call during a break in the conversation -- even if it's just to correct misinformation or to provide assistance. I also drop my call for other non-emergency situations -- I need to use the autopatch, make a quick call, or whatever. I reserve break, break break, and break-break-break for real emergencies depending on the severity.

However, and I think this is the important part. When I'm in a QSO and someone wants in (droping a callsign, break or however), that person is allowed to go ahead immediately. Part of the reason I do this is simple curteousy. The other part is that we don't know what type of traffic that person may have -- although you can generally tell by the tone of the voice. A nice side effect is that the person jumping in knows who to pass it to when finished if he or she is joining the QSO.

There are one or two people in this area (unfortunately) that hear and recognize a breaking station, go into a three-minute diatribe on the benefits of windfall in the Amazon swamps, then turn it over to the breaker. Arrggh!

I try to follow the guideline that we're all curteous and friendly toward one another -- at least as best as possible.

We can dislike the behavior of people without hating the individual person. I dislike the behavior of homosexuals, violent criminals, drug pushers, rapists, pedophiles, necrophiliacs, bestialphiles, peeping Toms, stalkers, repeater jammers, cannibals. (If I've left anyone out please email me. Sorry I didn't mention BSS'ers...) (These aren't words I normally use so sorry if any are misspelled).

Now, you would not be able to determine any of the above by just looking at them, therefore they are not minorities as in the racial sense. To say that homosexuals are a minority is to say that child molesters are a minority. Should we have special hiring provisions for child molesters? Nope. We must not classify a person as being in a minority according to their behavior.

The plain truth is that most folks are disgusted by the behavior of the above groups. To compare disliking a person's actions with Hitler's wanting to exterminate the Jews is a very, very sorry arguement; the usual empty arguements that the pro-gay groups try to pin on us.

Whether you're a homosexual or a cannibal keep your activities to yourself so we won't be disgusted and you won't be judged. If you flaunt your unpopular behavior then expect to be chastised.

Okay, lets all go over to .policy and continue the code debate
and discuss antenna restrictions.

The PC equipment adds the subcarrier to the video and modulates the final with the combined signal, which can cause the buzz.

To keep them separate would essentially require two transmitters and a duplexer.

Unfortunately, your information about the Lambda Amateur Radio Club and its complaint before the State of Connecticut Commission on Human Rights and Opportunities is incorrect. As I was personally involved in this matter, I'll give you the facts:

In late 1985, LARC sent in a classified ham-ad for publication in QST, along with payment for one year. The LARC ad was published in the November 1985 issue of QST. It was ordered removed by David Sumner and payment refunded. For the next 6.5 years, LARC attempted to reason with the ARRL, through a variety of officials. All attempts to discuss the simple LARC ad were refused.

In 1991, LARC was offered representation by the Lambda Legal Defense and Education Fund in New York, along with the law firm of Brown Raysman & Millstein. The five attorneys filed a complaint with the State of Connecticut for discrimination based upon the 2.4 pounds of documentation written, mostly, by the League itself. The state has been investigating. A ruling is expected very shortly and all indications are that the state will find in favor of LARC, but that has not, as yet, happened.

This case is one of discrimination, not running an ad. The ARRL has already agreed to run LARC's ad, but the complaint was not for that, but for their disrciminatory practices. In Connecticut, it is illegal to discriminate on the grounds of sexual orientation. So far, the ARRL has refused to agree not to discriminate in any future dealings with LARC, so the complaint continues to move through the state system.

The ARRL changed its position on the ad only when they were served the complaint papers. They are incorrect that their agreeing to run LARC's ad negates the complaint -- and the state has informed them of that.

The ARRL can end this any time it wants to by negotiating with our attorneys for an assurance that they will not discriminate against us in the future. It doesn't have to be public -- God knows they've never said anything about the club in the past -- and no one, the ARRL or LARC, need be embarassed. Their refusal to cooperate in this matter should be embarassing enough.

The ad in question has been running continuously in CQ for the past two years in case you'd like to take a look at it.

Message-ID: <dbledsoeCF34x4.3wJ@netcom.com>
Source record: 274693

One more thing ... we get far more positive publicity by doing constructive things like putting three new countries on OSCAR-13 or buying advertising in ham publications. A legal action against the ARRL is a poor way to get ANY publicity -- after all, have you seen it reported in the pages of QST? Of course not.

Cash is not part of any negotiations with the ARRL, so I don't expect to see any. Before you start seeding people with erroneous information, please make sure you know the facts.

LARC resorted to a legal action because of the ARRL's refusal to discuss the issue -- repeatedly. So, we were left with no alternative but to let them discuss it with the State of Connecticut. It's sad because I'd prefer my ARRL membership monies be spent on more constructive activities.

I just passed my Technician liscence and i have looked at several rigs, I am
interested in the FT-530 model and got its available mods from the newsgroup,
for those who have the subject rig and have done the mods, i would appreciate some feedback
on the performance of the rig in general and specifically
after the mods have been done, how is the reception in the cellular, marine
band, any feedback on the quality ,range of transmit in the marine band
in cases of emergency,
In general how is its audio output in a noisy environment, like when you are
driving ,can you still hear reasonably O.K with the engine noise in the
background
I tried to find some articles on the rig and checked ARRL pubs,but no success.
thanks in advance

tony, (tony@ccd.harris.com)

Yeah, and after you tweak the software you can operate from Leavenworth. :-)

(BTW, that dumbass ad showed up in the Nov. issue of 73.)

I find it interesting (and a bit disappointing) that Lambda would elect to attack a national organization in the state where its headquarters happens to be. No doubt this will lead to more lengthly litigation before a definitive answer is arrived at.

>This case is one of discrimination, not running an ad. The ARRL has
>already agreed to run LARC's ad, but the complaint was not for that, but
>for their disrciminatory practices.

What 'discriminatory practices' other than refusal to run the ad?

>The ARRL changed its position on the ad only when they were served the

>negates the complaint -- and the state has informed them of that.

Did you or did you not get what you wanted. What do you want, anyway? Revenge?

>The ARRL can end this any time it wants to by negotiating with our
>attorneys for an assurance that they will not discriminate against us in
>the future.

Unfortunately, I must now count myself as among those who is puzzled as to what, exactly, Lambda would have the ARRL do. Other than to humiliate itself. If the officers are to be chastised, should that not be done by the membership, rather than the courts? How is Lambda's approach helping them to reach their ultimate goals of acceptance as peers in the fraternity?

These mostly are in the 155 MHz 'business band' and are not intended for
personal use. They require a license, and it is illegal to use them for
personal use. There is also a uhf band, but I don't remember the freq.

OK folks, does anyone know what is *really* the issue with the Lambda ARC lawsuit against the ARRL? I've read lots of comments on the topic, but I have yet to figure out *exactly* what Lambda was trying to get published and *exactly* why ARRL/QST refused to publish whatever it was. I've read suggestions that imply QST just doesn't want to publish anything from Lambda, that Lambda missed publishing deadlines, etc., etc., etc.

Does anyone know the facts in this whole thing? Perhaps we could take a break from the guessing, accusing, bashing, etc. until we know some facts here...

Would somebody please send me a copy of Newsline #842? I guess I missed it, and it's timed out here.

Tnx es 73, Doug

PS, how does LARC differ from any of the other special-interest groups which hold nets on the amateur bands (aside from the obvious)? I personally don't care for the works of Ayn Rand, yet there's a net devoted to cussing and discussing them. Nor do I care for the state of American Education, yet there are educators' nets around (perhaps even one sponsored by the NEA, if I 'member rightly, which might be in violation of Part 97, now that I think about it). But nobody complains about them, ditto the ones devoted to the NRA, VFW, or any other of the many SIGs out there. Seems hypocritical to me.

Well, the PS went on longer than the actual message, so I'd better sign off.

73, Doug

PPS, and before the flamage starts, I'm straight, and send it right to /dev/null.

-d

>arguement; the usual empty arguements that the pro-gay groups
>try to pin on us.

Fine...then let's compare it to Hitler's attempted eradication of the Gays in Europe, which he also wrote and felt strongly about. If I 'member my history right, he forced homosexuals to wear an armband the same as he did Jews (you know the inverted pink triangle? Where do you think that came from?). He rounded them up into concentration camps--same as he did Jews (when they weren't shot down out of hand).

What people tend to forget is that the Holocaust didn't only affect Jews. They were just the largest and hardest-hit group.

That's right. Don't give out false info. The story the guy told in short fashion was essentially correct.

How do I know. I spoke with several people involved as it was occuring. The Board had decided to change the advertising policy, this mostly due to politicing done by the Lambda chapter in SF, and roughly that same week Lambda International dropped the lawsuit bomb forcing the board to hold off any decision. Now, naturally, if you enquire about such things you'll get a blank stare from league staffers cause they aren't allowed to comment on any pending legal action(for obvious reasons.)

That is what happened. I find it also interesting that at least the last time I was caught up on the subject, the Golden Gate chapter had dropped their membership in the international Lambda.

Coaxial cable trap for my HF 80-40 meters dipole.

I would like to build the traps shown in the 16th edition of
the ARRL Antenna Book on page 7-9.

For the construction, they give the reference to an article in
QST Dec 84 page 37 by N4UU. I don't have this QST.

If you have this QST, can you post here the dimensions
and the number of turns to make a 7.1 Mhz trap. I would
like to use a core of plastic pipe 2" O.D.

Any other details or suggestions are welcome. If you have made them,
how do you like them?

Whoops! Latest findings reduces this to 1-2%; that 10% figure was reportedly
from flawed research in the early 50's. [Both our Honolulu newspapers ran
a story on this, taken from one of the national wire services.]

Gee Derek, `amatuer' is much closer to the actual pronunciation; I think
our system of spelling needs to be overhauled...

Subject: Re: SSB Intruders on HF
In-Reply-To: Your message of
Message-Id: <CMM.0.90.2.751247547.jherman@uhunix3.uhcc.Hawaii.Edu>

Drew,
Here's an idea: draw up a petition - get lots and lots of signatures
- pass copies around at all possible club meetings - get it into your
radio journals and club newsletters countrywide; then submit the complaint
and signatures to your governing communications authority to demand (through
the ITU) that the responsible governments do something immediately. Mention
things such as the possibility of the illegals interfering with emergency
traffic, navigation, or whatever. Got to make it sound convincing.
If you can somehow find out what equipment the illegals are using,
publicize it widely - shame the distributors.
Those governments probably would give this a very low priority
but at least you'll be able to blow off steam.
I'm sorry you folks have to encounter this - I think the North American
hams don't realize the serious nature of this. I study Vietnamese language
and culture and I've learned that pretty much anything goes in South East
Asia - the governments are rather corrupt, and have their hands full just
trying to keep order.
Take care, mate.

Jeff NH6IL
****
N O T I C E

TO ALL VISITORS

WHAT YOU ARE ABOUT TO WITNESS IS AN AMATEUR RADIO STATION
LICENSED AS _____ BY THE FEDERAL COMMUNICATIONS
COMMISSION IN WASHINGTON, DC. BEFORE YOU ASK THE QUESTIONS, HERE ARE
THE ANSWERS:

1) The total cost of this equipment cannot be discussed here as
it creates marital conflicts.

2) No, we cannot send a message to your brother in Hong Kong. We
suggest you call Western Union.

3) This is strictly a hobby; we do not have the facilities or the
time to fool around with TV sets, radios or hi-fi. We suggest that you
see a serviceman.

4) Yes, the antenna in the backyard is essential to the operation
of the equipment.

5) The farthest station we have contacted has been in the
Ubangiland.

6) The cards on the wall are called QSL cards. They are
confirmation of contacts made with other stations.

7) It is technically impossible for this station's equipment to
interfere with television reception, telephones or stereo systems. Any
interference problems of that nature are caused by design flaws in the
home-entertainment devices themselves.

8) An Amateur Radio station may only be operated by a highly qualified,
technically skilled electronics expert. It takes dedication, training and
intelligence to reach the level of competence that justifies one to be
license by the United States Federal Government. Therefore, it is not
considered inappropriate to show proper awe, respect and general
obsequiousness when I discuss my hobby or operate the controls.

FURTHERMORE...

IF YOU ARE GRANTED THE EXTREME HONOR OF BEING INVITED TO SPEAK INTO
THE MICROPHONE, PLEASE OBSERVE THE FOLLOWING RULES:

1) Speak in a low and soothing tone.
2) Do not disagree with me in any manner.
3) Say no bad words and tell no off-color jokes.
4) It is customary for guests to make complimentary remarks about this station and its licensed operator when talking to other hams on the air.

DO NOT TOUCH ANYTHING, TURN ANY KNOBS, SIT ON EQUIPMENT, ETC. I HAVE LOST SEVERAL VISITORS BY ELECTROCUTION IN THE PAST FEW WEEKS.

****

Thank you for your cooperation

>>the bestialphobic feelings that many are prone to innately have.
>
>Perhaps you can explain the point of this post. Are you saying
>that homosexuality is the same thing as bestiality?

You're making the comparision, not me; no mention of homosexuality
was made.

>I am not clear how sex between consenting adults is the
>same thing as sex with animals. You will need to explain

If you email me, I'll share with you how they're behaving here on campus.
Rather sickening.

>this one, otherwise, we can only conclude that you truly
>practice bestiality and are really trying to start an ham
>radio club to promote it.
>
>Are you saying that sex should not be discussed via amateur radio,
>or just sex that you consider to be a perversion? If I consider

So where would you like to draw the line as to what's perverted and
what's not? Is homosexuality okay? necrophilia? pedophilia? bestiality?

Anyway, we can carry on the discussion via email; this has already
been discussed earlier this week.

Jeff

3880. Re: Internet address of VOA, BBC ???

Newsgroup: rec.radio.amateur.misc

From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <CFFAH2.HAC@news.Hawaii.Edu>
Source record: 274715

In article <9310240940.utk1412@FAB8.intel.com> RHAREL@FAB8.INTel.COM (RICHARD HAREL) writes:
>Anyone know if the VOA or BBC or other major government braodcasting
>agencies are on the internet ?
>-Rich
>WB2JBS

Rich, rec.radio.shortwave carries a wealth of info concerning int'l broadcasters. For the VOA, df@voa.gov will get you to Dan Ferguson; he regularly posts the worldwide VOA bcst schedule on r.r.s.

Michael emailed me prior to posting his article (I directed him to here);
he stated he is studying for his license - for now he just wants to listen
to some repeaters to pick up the protocol and jargon. Maybe some folks
in the Bay area could help him out.

^^^^^^^^^^^^^^^^
>> once again be removed, how can we possibly drop our complaint?
>

Don,
If QST represents the ARRL, and the ARRL represents it members, and
if the membership doesn't want your ad to appear, then what grounds do
you have for a complaint? Why should the ARRL (i.e., the membership) go
against the wishes of its members? Seems rather contradictory to me.

```
Archive-name: radio/ham-radio/hams-on-usenet/part1
Last-modified: $Date: 93/24/28 07 24$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
First part contains primarily European calls with US call district 0.

The index of parts:
Part 1 contains 4x1pi through wa0zti
Part 2 contains nv1a through ka2zvz
Part 3 contains wn3a through kc4zwi
Part 4 contains kj5aa through kd6zwi
Part 5 contains aa7a through wa9zxm
Part 6 contains oa4hv through zs4vg

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
```

```
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update October 28 1993
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. Some GEnie Hams are included
# (Generated by Brian Murrey/KB9BVN) in this list. For addresses like
# #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
# Name Name of the individual.
# Call Call letters of the individual. Old and alternate calls '/' separated.
# Date Last update YY-MM[-DD] International format.
# A trailing * denotes not searched in call book for verification yet, @
# means not found in call book (1987 or 1992 US). ? after means recheck may be
# required (eg. Call does not match name).
#

3884. Radio Amateurs on USENET List Oct 1993 Part 2 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-28 13:24:31 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Oct28.2@ve6mgs.ampr.org>
Source record: 274720
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part2
Last-modified: $Date: 93/24/28 07 24$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Second part contains US call districts 1 and 2.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
```

#
Last update October 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

3885. Radio Amateurs on USENET List Oct 1993 Part 3 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-28 13:24:34 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Oct28.3@ve6mgs.ampr.org>
Source record: 274721
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part3
Last-modified: $Date: 93/24/28 07 24$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Third part contains US call districts 3 and 4.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
```

```
#
# Last update October 28 1993
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. Some GEnie Hams are included
# (Generated by Brian Murrey/KB9BVN) in this list. For addresses like
# #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
# Name Name of the individual.
# Call Call letters of the individual. Old and alternate calls '/' separated.
# Date Last update YY-MM[-DD] International format.
# A trailing * denotes not searched in call book for verification yet, @
# means not found in call book (1987 or 1992 US). ? after means recheck may be
# required (eg. Call does not match name).
#

3886. Radio Amateurs on USENET List Oct 1993 Part 4 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-28 13:24:37 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Oct28.4@ve6mgs.ampr.org>
Source record: 274722
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part4
Last-modified: $Date: 93/24/28 07 24$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fourth part contains US call districts 5 and 6.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
```

#
Last update October 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

3887. Radio Amateurs on USENET List Oct 1993 Part 5 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-28 13:24:40 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Oct28.5@ve6mgs.ampr.org>
Source record: 274723
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part5
Last-modified: $Date: 93/24/28 07 24$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fifth part contains US call districts 7, 8 and 9.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
```

#
Last update October 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).
#

3888. Radio Amateurs on USENET List Oct 1993 Part 6 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-28 13:24:46 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Oct28.6@ve6mgs.ampr.org>
Source record: 274724
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part6
Last-modified: $Date: 93/24/28 07 24$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Sixth part contains whatever is left over ... Canadian, Down under
and spots left here and there over the globe. Some Amateur Radio Related email
services are also itmeized at the bottom of the list.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
```

return wabbit@it.was.a.tewibble.storm.edu
lookup ka2nrc ve6tcp nm1d elmer
#
Last update October 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).
#

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1993 Test Fee is $5.60.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., PO Box 273, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368; No phone

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1993 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1993 Test Fee is $5.60.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1993 Test Fee is $5.60.

3890. ham.eetech.mcgill.ca closing --> mods archive moved

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-29 17:44:27 UTC
From: bruno@Atlas.EETECH.McGill.CA
Message-ID: <1993Oct29.174427.24738@sifon.cc.mcgill.ca>
Source record: 274725
Cross-posted to: rec.radio.info,rec.radio.amateur.misc,rec.radio.scanner,mcgill.amateur-radio

The mods archive at ham.eetech.mcgill.ca has been moved to a new (and more stable) home, at ftp.cs.buffalo.edu:/pub/ham-radio/mods.

ham.eetech.mcgill.ca will be going off-line permanently on Nov. 12.

This collection is believed to be the most complete available on the Internet at this time; and was complied by merging all known mod archives.

Happy modding, and 73!

Bruno

Notes of Interest:

Djibouti - J28JJ. QSL Jean Jacques Chatelard, Box 1076, Republic Of Djibouti. Jean Jacques will be stationed there for 3-4 years.

Walvis Bay - Coen, ZS4KK/ZS9 is operating here until 1 Nov. Check all bands 10-80m including WARC. QSL to CBA of ZS4NS.

Mount Athos - SV2ASP/A, Apollo was heard in QSO with his manager, SV2WT, but he did not respond to calls from others.

South Georgia - Keith, VP8CKB is still studying fur seals on Bird Island, but we have had no recent reports of RTTY activity from him. Perhaps Bob, VP8BFH can encourage him to become RTTY QRV again before he leaves next February.

We hope for the quick recovery, from major surgery, of Angelo, W5KSI. send your message of encouragement to him at W5KSI.#NOLA.LA.USA.NA. He has a packet station at his hospital bedside.

For next week's bulletin, send your Bandpass and Notes of Interest to Luciano, I5FLN @ ZS5S.ZAF.AF or I5FLN @ 9X5LJ.#KGL.RWA.AF.

73 and good hunting DE Jules W2JGR @ W2TKU.#SRQFL.FL.USA.NA

3892. Q-signals

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-30 18:51:48 UTC
From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <CFq4ED.GLE@news.Hawaii.Edu>
Source record: 274727

Gang,
Someone requested the list of Q-signals - I got this list from ARRL's email server - a real gold mine of information (to get their index of available articles send an email to: info@arrl.org and only write SEND INDEX).
Notice the `FOR CW USE ONLY' in the title...

Jeff NH6IL/QRP (ex: WA6QIJ)

****

From: info-serv@arrl.org (ARRL HQ AUTOMATED ELECTRONIC MAIL SERVER)
Subject: INFO response: Q-SIGNALS

AMATEUR RADIO "Q-SIGNALS"
FOR CW USE ONLY

QNA Answer in prearranged order.
QNC All net stations copy.
QND Net is directed.
QNE Entire net stand by.
QNF Net is free.
QNG Take over as net control station.
QNI Net stations report in.
QNM You are QRMing the net.
QNN Net control station is [call sign].
QNO Station is leaving the net.
QNP Unable to copy you.
QNS Following stations are in the net.
QNT I request permission to leave the net.
QNU The net has traffic for you.
QNX You are excused from the net
QNY Shift to another frequency.
QNZ Zero beat your signal with mine.
QRG Will you tell me my exact frequency?
QRH Does my frequency vary?
QRJ Are you receiving me badly?
QRK What is the intelligibility of my signals?
QRL Are you busy?
QRM Is my transmission being interfered with?
QRN Are you troubled by static?
QRO Shall I increase power?
QRP Shall I decrease power?
QRQ Shall I send faster?
QRS Shall I send more slowly?
QRT Shall I stop sending?

QRU Have you anything for me?
QRV Are you ready?
QRX When will you call me again?
QRY What is my turn?
QRZ Who is calling me?
QSA What is the strength of my signals?
QSB Are my signals fading?
QSD Is my keying defective?
QSG Shall I send messages?
QSK Can you hear between your signals?
QSL Can you acknowledge receipt?
QSM Shall I repeat the last message?
QSN Did you hear me?
QSO Can you communicate with me?
QSP Will you relay?
QST General call preceding a message.
QSU Shall I send or reply on this frequency?
QSW Will you send on this frequency?
QSX Will you listen?
QSY Shall I change frequency?
QSZ Shall I send each word more than once?
QTA Shall I cancel message?
QTB Do you agree with my counting of words?
QTC How many messages have you to send?
QTH What is your location?
QTR What is the correct time?

INSTANT LICENSE PROPOSED

The FCC has proposed what amounts to an instant ham radio
license for new hams. In reality its actually a form of
temporary operating authority to unlicensed persons who pass the
examination for a new amateur operator license, and it signifies
a major change in the attitude of the commission toward getting
newly tested operators on the air.
The new system would work this way. The temporary operating
authority would begin when the exam is passed and an application
for a license is filed, and last until a full-term license is
received from the FCC, but not more than 120 days. The temporary
operating authority would not be available to anyone whose
license has been revoked or suspended or who has been involved in
other enforcement proceedings before the FCC. Under the
proposal, the Commission also would reserve the right to cancel
such temporary operating authority without a hearing if a need to
do so arose.
Those operating under the proposed new rules would use call
signs determined by the initials of their name and by their
mailing address. The prefix for each such call sign would be WZ
followed by a number indicating the appropriate Volunteer
Examiner Coordinator region.
The Commission said it believes this system would be useful to
the amateur community, yet practical to implement. It also said
that it was making the overture to better serve new amateurs and
to increase productivity in the processing of license
applications.

The proposal, assigned PR Docket 93-267, was based on a petition for rule making made in July by the Western Carolina Amateur Radio Society V.E.C. of Knoxville, Tennessee with the previous designation of RM-8288.

*****
FCC AWARD TO HAM

A real-life ham radio hero has been honored by the FCC. The regulatory agency has presented a bronze plaque of appreciation to Melvin I. Woods, KN4ZT, of Annandale, Virginia. Woods was cited by the Commission for what it called outstanding assistance in solving a false distress signal case in 1992.
The case involved a phony S.O.S. sent out on 14.313 MHz back in August 1992. The FCC said Woods not only provided important information at the time but also cooperated with the agency in its subsequent investigation.
Woods, 58, served in the U.S. Navy from 1952 to 1976 and is a former Senior Chief Radioman and Chief Electronics Technician. He was first licensed as a Novice in 1953 and currently holds the Amateur Extra Class license.
At the awards ceremony Woods also received the U.S. Coast Guard Public Service Award from Rear Admiral William J. Ecker.

*****
CB BUST

The FCC is not wasting any time in issuing fines under its new monetary forfeiture schedule. As reported last week, the commission can now ding a violator up to twenty thousand dollars for a first offense and that's exactly what has happened to some alleged part 95 violators.
About a dozen accused marketers of illegal equipment targeted at the Class D eleven meter band have each been fined between six thousand and twenty thousand dollars by the FCC. The commission says that the stores in question are located in California, Colorado, Florida, Louisiana, Michigan, Texas, and Washington state. The FCC says that they were all engaged in the sale of illegal CB radios or linear power amplifiers for the 11 meter band.
In addition, several firms were fined seven thousand dollars each for allegedly marketing non FCC certified personal computers and unauthorized UHF modulators and transmitters that operate on television channels fourteen through twenty six.
At airtime it is not known if any appeals have been filed by those fined in this latest FCC action.

*****
LA FIRES

A 2000 acre fire storm fanned by Santa Ana winds has taken several southern California repeaters off the air. The ham radio

relay equipment along with several emergency service repeaters and an FM radio station was destroyed when flames ignited a private residence atop Rasno peak in Ventura County. The destruction of the radio site occurred on Tuesday, October the 26th.
Since then, hundreds of hams all over the state have been pressed into service as wildfires continue to rage. As we go to air there are well over a half dozen fires still burning and some radio amateurs have already been working fire related emergency communications non-stop for several days.
More on this story, next week.

*****
MORE SAREX QSO'S

Heres an update on the Sarex ham radio space shuttle flight now underway. The SAREX Working Group has asked the Shuttle crew to set some extra time aside for general FM Voice QSO opportunities. These times were originally scheduled as backup school group passes and run from 1635 to 1642 UTC on Friday October 29th, and from 13:22 to 13:34 UTC on Saturday October 30th.
All Sarex operation is split frequency. The Shuttle downlink frequency for voice and packet is 145.55 MHz. This is a receive only frequency. Voice uplink frequencies for all areas except Europe are 144.91, 144.93, 144.95, 144.97 and 144.99 MHz. Europeans should transmit voice on 144.70, 144.75 and 144.80 MHz and avoid the other channels. The worldwide packet transmit frequency is 144.49 MHz and the packet call sign is W5RRR-1.
The mission is scheduled to end with a landing at Edwards Air Force Base in California at 1522 UTC on Monday November 1st.

*****
PERRY WILLIAMS RETIRING

ARRL Washington Area Coordinator Perry Williams, W1UED, has announced that he will retire in April of 1994. This, after 40 years of service for the League. He is currently the staff member with the longest tenure of Headquarters service.
Williams, who is 65, began his ARRL career in 1954 in the now disbanded Secretarial Department. He next served in the Membership Services Department when the League Headquarters was located in West Hartford and became Washington Area Coordinator in 1980.
No successor to the Washington Area Coordinators post has yet been named.

*****
SHRINER NET

The Shriners net meets every thursday night at 2300 UTC. It originates from Shriners Hospital for crippled children in

Philadelphia on 14.328 Mhz. You don't have to be a Shriner to participate. It is operated by LuLu temple radio unit, and is designed to teach the patients about ham radio, and communicate with other Shrine hospitals throughout the United States.

*****
PACKET FOR THE DEAF

If you know someone who is deaf and interested in using packet radio, then let them know that G1TKX and his friends are considering forming a support group for them. Tony says that the group will try and provide help, training, encouragement to aurally handicapped radio amateurs worldwide. If you are interested please contact G1TKX at the GB7MRU 19 packet bulletin board in Great Britain.

*****
HAM BBS

KB0DSW's says that his Amateur Radio BBS is open to all that wish access. You can reach the BBS at area code 701, 839-2163. Its available 24hrs a day and accepts any rate up to 14.4 baud. The defaults are the standard 8-N-1. Sysop Tom Herrod says the board caters to a wide variety of needs, and specialize in Amateur Radio and SWL programs and information. It also has an On-line CD-Rom, SAM-Amateur Radio CallSign Database and serves as a local Packet GateWay.

*****
AMSAT AREA COORDINATORS NEEDED

AMSAT North America says that it needs Area Coordinators in all parts of the country as part of an effort to increase the visibility of AMSAT's existing satellite operations and Phase IIID developments. Area Coordinators are volunteers whose activities may include AMSAT booths at hamfests, local AMSAT nets, presentations to local clubs in addition individual "Elmering". Through their activities these Area Coordinators increase awareness of the radio amateur satellite program in addition promoting AMSAT membership and fund raising for the Phase 3D satellite. Contact AMSAT if you're interested in taking on such a job.

*****
DX

In DX, the Golan Heights as OH3MIG/4U will be active until sometime in December. This counts as Syria for DXCC credit and you are advised to QSL as directed.

*****
BROADCAST HAMS LIST

Hams who work in or are retired from any aspect of professional broadcasting should drop a note to Rich Aronson K2RVM and have your name and call sign added to a list ham radio broadcast professionals. According to a note from Hank Flokerts K4KO, he recently turned the duties of compiling the list over to K2RVM after doing the chore for a number of years.
The service originated as a roster of hams who were Nabet Union engineers employed at NBC. It has since been expanded to include hams in every aspect of the business including air talent and management. The latest list, and the last put out by K4KO includes hams at ABC, NBC and Fox. Your help is needed to make it include every ham who works in the broadcasting industry.
If you are a broadcasting professional and if want your name, call and affiliation added to this growing list, please drop a note to Rich Aronson, K2RVM, 207 Cinnamon Way, Flat Rock, North Carolina 28731.
Sorry, but this list is available only to those hams who work in the broadcasting industry. If you want a copy please send a standard business sized SASE to K2RVM.

*****

For this week, that's all from the Amateur Radio Newsline.
You can write to us at Post Office Box 463 in Pasadena, CA 91102.

3894. HAM-server index file

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-31 08:40:41 UTC
From: HAMSinfo@GRAFex.sbay.org
Message-ID: <gate.ias0Bc1w165w@GRAFex.sbay.org>
Source record: 274635
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

NOTE: New email address:
HAM-server@GRAFex.sbay.org

Index of files.

NOTES: ----------

If you do not know how to use HAM-server, send email to
HAM-server@GRAFex.sbay.org. In the text, place HELP.

If you order a file and do not get it, check the index to be sure you have spelled the filename correctly. If you have ordered the file correctly, then order a new INDEX, as I may have moved the file to a different directory. The system is still expanding, and I am trying to keep it in managable chunks.

Also, if you have ordered files from HAM-server and do not receive them, it might be because your return path is incorrect. My bounce mailbox fills up quite regularly with bounce messages. And, since the path is incorrect, I cannot contact you to let you know.

Orders must be sent to HAM-server. Orders sent to KA6ETB or HAMSinfo are ignored. If you are reading this from usenet, do not respond to this post. You must send email to HAM-server@GRAFex.sbay.org.

A new INDEX is automatically generated weekly and when files are moved or added.

The archives may contain the same file under different names. If you should run across one of these, please let me know with email to
KA6ETB@GRAFex.sbay.org

Amateur Radio television on the ABC

Next Tuesday evening an item is scheduled about ATV on the ABC show "TVTV" that goes to air from 6.30 pm to 7 pm on your local ABC TV channel.

A "TVTV" crew came to the studio of the Gladesville Amateur Radio Club in Sydney on Wednesday last, 27th October, to video all that happened on the transmission, from set-up to the last video item. The crew consisted of an anchorman, camera man, sound man and the producer. They spent three hours at the studio and were very interested in all that went on.

You may have already seen the item listed for next week at the end of the Thursday night show this week (28th October) with the clip showing Tim VK2ZTM presenting; so be watching ABC Television on Tuesday night 2nd November at 6.30 pm to see Amateur Radio gather some more publicity, hopefully attracting more people to our hobby.

The time may vary from state to state with daylight saving commencing this week, so it would be best to check your TV guide.

If the scheduled date is altered for any reason, we will put a message on the packet system asap.

The show again is "TVTV", ABC Television, usually 6.30 pm start.

Received from the Gladesville Amateur Radio Club

WAE RTTY Contest rules part 1

Contest period : 13-14 November, 1200 UTC Saturday to 2400 UTC Sunday.

Bands: 3.5, 7, 14, 21, 28 MHz.

Classifications: a) Single operator - all bands

b) Multi-operator - single transmitter (only one signal on any band at the same time is permitted).

c) Multi-operator - multi transmitter (no limit to transmitters, but only one signal per band permitted. All HF transmitters must be located within a 500 metre diameter and within the property limits of the station licensee's address.)

Rest periods: Of the 36 hour contest period only 30 hours of operation are permitted for single operator stations. The 6 hours of non-operation may be taken in one but not more than three periods at any time during the contest. They must be clearly noted in the log.

Exchange: There are no continental limitations -- everybody works everybody. Exchange the usual five or six digital RST plus a progressive QSO number starting with 001 (multi/multi stations keep serial number by band). A station may be worked only once per band.

To be continued

IPS weekly report
---
22 October - 28 October 1993

Issue no.: 44

Date of issue: 29 October 1993

Date 22 23 24 25 26 27 28
10cm 92 92 92 87 89 87 88
A 17 13 10 27 13 32 (13 estimated)
T 36 15 28 32 01 24 -19

Summary of activity

Solar activity was very low 22nd-23rd October and low for the remainder of the week. No flares were reported.

The geomagnetic field at Learmonth (WA) was quiet to unsettled 22nd-25th; quiet, with active to minor storm levels 1500-2100 UT on 26th; unsettled to active on 27th, and quiet to unsettled with brief active periods on 28th.

Ionospheric F2 critical frequencies at Sydney over the period ranged from near normal to depressed by up to 40 per cent. There was some sporadic E blanketing of the F layer on 26th and spread F conditions were evident 0900-1800 UT on 28th October.

Forecast for the next week (29 October - 4 November)

Solar : Low.

Geomagnetic: Quiet to unsettled.

Ionospheric: 15-30 per cent depressed on 29th October, slightly depressed on 30 October and near normal thereafter.

areas, already current in VK7.

November 13th-14th WAE RTTY Contest

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President (Col) VK2CTD, or the Secretary (Pat) VK2JPA @ VK2RWI

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA @ VK2RWI.

The Internet address for the Broadcast Officer is :
patl@extro.ucc.su.oz.au

The Society welcomes news items on any digital subjects from
anywhere in the broadcast footprint. We are looking forward to
news from your areas to let other amateurs know what you are
doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

That concludes the A.N.A.R.T.S. News 783 31 October 1993.

Inserted by VK2BQS (Jim) Vice President ANARTS,

I have uploaded to the SimTel Software Repository (available by anonymous ftp from the primary mirror site OAK.Oakland.Edu and its mirrors):

pub/msdos/hamradio/
simptr20.zip Hams:SimpTerm generic TNC/TU interface com pgm

SimpTerm is a simple terminal program designed to be used with almost any TNC or TU on the market. Features of SimpTerm are:

o Runs under DOS.
o Split window operation.
o Macro key definitions.
o User customizable Help screen
o Most of the non-ascii keys can be used as function keys
o Optional scroll back feature on the receive window and transmit windows
o Simple status display in the middle of the screen
o Capturing of data to a disk file
o Access DOS commands without dropping communications connection
o Control of the com port definitions from command line, init file and keyboard.
o Works on 8088 as well as 80486 and everything in-between.
o Status line
o Small enough to work well on resource tight platforms, like laptops.
o Selcal functions, limited unattended operation.
o Times can be in GMT or local time.
o A station logging function.
o User selectable color scheme
o Function keys and control keys can be assigned to a macro string, cause a file to be uploaded or call a function within the program.

Uploaded by the author.

73,
Jim.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL, OD5ZZ, W4VQ, VP2ML & DX Magazine and VE6KC for the following DX information.

50TH ANNIVERSARY OF LEBANESE INDEPENDENCE AWARD. NODXA member Walid, OD5ZZ, informed OPDX that this award will be issued by the "President Karami Radio Society" (PKRS) for any amateur station who has worked 10 different PKRS members on two different bands between the period of November 15th and December 15th (1993). The same station can be worked on more than one band and one of the contacts must be with OD50RAK. The station OD50RAK will be active daily on 14308 kHz (time was not given). The GCR rules will apply for all stations. A special plaque will be available to any station that meets the above requirements but on five different bands on any mode. The fee for the basic award is 5 USD and fee for the plaque is 25 USD. Requests for the award can be sent to: OD5ZB, Bassem Sibai, P.O. Box 782, Tripoli, Lebanon, Asia. PKRS stations are: OD50RAK, OD5JY, OD5KM, OD5LT, OD5PL, OD5RF, OD5SA, OD5SB, OD5SC, OD5SF, OD5SH, OD5SK, OD5QH, OD5QS, OD5WD, OD5XY, OD5YL, OD5YT, OD5YU OD5ZB, OD5ZN, OD5ZM, OD5ZZ and AA3EI.

8Q7, MALDIVES. Andree, DL8LAS, will be active from November 1-15, on all bands both CW and SSB. He likes to operate on 20 meters (check CW/14013 and SSB/14233). QSL via CBA or the DARC bureau.

CH8MNP CARDS. Larry, VE6KC, reports that the QSL cards for the Cameron Island IOTA DXpedition have not yet been printed, but should be in by the year's end. He ask that all who had contacted CH8MNP please be patient. The operation made about 6000 contacts, mostly Europe.

EP, IRAN. The DXNL reports that the planned EP DXpedition by EX0A and others had to be postponed because the border is closed due to several cholera cases.

J2, DJIBOUTI. Jean, J28JJ, who will be active from here the next 3 to 4 years, was heard operating RTTY on 21087 kHz around 1630z. QSL to Jean Jacques Chatelard, Box 1076, Republic of Djibouti.

JY, JORDAN. Bernd, DL1VJ, will be active as JY8VJ from November 20th to December 1st. He plans to take part in the CQ WW CW Contest as Single Op/ Multi-band class. QSL via DL1VJ: Bernd Laenger, P.O. Box 1240, D-66273 Sulzbach/Saar, Germany. QSLs via the bureau are OK.

MOST WANTED COUNTRIES. The results of the "1993 Most Wanted Countries Survey" by Chod Harris (VP2ML) were announced in the Nov/Dec issue of the DX Magazine. Out of the top 100 here is the "Top Ten":
1) Peter 1 Island - 3Y1 6) Tunisia - 3V
2) Bhutan - A5 7) Yemen - 4W
3) Libya - 5A 8) Tromelin - FR/T
4) Andaman - VU4 9) Macquarie Is. - VK0
5) Heard Island - VK0 10) Mount Athos - SV/A

* Just a reminder: Ballots for the "3rd Annual OPDX/NODXA DX Survey" will be coming out sometime during the month of November.

ST0, SOUTHERN SUDAN. A station signing ST0K was heard October 27th, on 18070 kHz around 1200z. No other information is known about this station, other than the operator stated to QSL via Box 617, Khartoum. (WFWL!)

UPCOMING DXAC VOTES. DXAC CHAIRMAN, Robert, W4VQ, has scheduled the following DXAC votes before the end of the year: RTTY Honor Roll, Revision of CW DXCC Start Date, DXAC Manual and the tabling of the Mount Athos Issues. "QSL Guidelines" will be voted on in January 1994.

VK9X, CHRISTMAS ISLAND. A couple of operations will take place from here with one of them starting as early as the first part of November. Steve, VK6VZ, will be traveling to the island early in the month (November 6-13) mainly for a holiday with his wife, but will be active as VK9XZ. Activity will be mainly on 20 meters CW and SSB (with a possiblity of 40 meter CW activity). Also look for him on the 14226 nets (Butterfly and Southern Cross). QSL via VK6VZ.
Bob, W5KNE (editor of QRZ DX), will be active from November 27 to December 15 as VK9XN. He plans to be active on all bands CW/SSB but prefers 80/40/30 meters.

XU, KAMPUCHEA. Mike, VS6WV, whose trip to XU-land was post-poned for a few days, is scheduled to be back in XU-land during the weekend of the CQ WW SSB Contest. As XU6WV, he will concentrate on those who need Zone 26 on 40/80 meters for 5BWAZ. QSLs for VS6WV and XU6WV go to K0TLM.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send

BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to:
DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Charles,
I posed that question to Don because he stated that letters of complaint
had been written by members to the ARRL with regard to the ad.

Jeff

The N8EMR Ham bbs is online to serve the needs of the
amateur radio operators..

HOW TO ACCESS THE N8EMR HAM RADIO TELEPHONE BBS !!!

System Name: N8EMR
Phone: 614-895-2553
Login: hbbs
Modems: TB2500 PEP/V.32 support
Times: 24hrs
IP Address: 44.70.0.1
Amateur radio annonymous ftp access is available via the ohio
netrom/ip network. CMHIP is the Netrom node Id and is known
by most of the nodes in ohio. (its slow but it works)
This is only via the ohio packet network. This sytem
is not available via the "INTERNET".

To access the system via the dialup, at the login prompt type hbbs
(lower case only), you will then enter the BBS program. Follow the
directions from the bbs prompts.

I attempt to keep the latest and greatest HAM software on-line, and
encourage all to upload Here is some of software that is available
for downloading.

NEWHAM area. Pick the tools you need to become a ham
AMSAT news and satellite keplerian elements
KA9Q TCP/IP Software for various computers,
ARRL related files
Latest packet bbs programs and utilitys.
Modifications for HAM Rigs and Scanners
DX and contesting programs
Many Packet related programs
Scanner, shortwave and TVRO files and messages.
NASA NEWS..
Online Callsign lookup.

Question or comments to

Gary W. Sanders (gws@n8emr.cmhnet.org), 72277,1325

```
EMAIL CALLSIGN SERVER
US CALLS ONLY
(access interface changed..)

For those who do not have telnet access to marvin or one of the other
Internet callsign servers here is an alternative.

N8EMR's Ham BBS, 614-895-2553 has an email server up and running.
The Server is based on Buckmasters Fall 92 database.

------------------------ INTERNET AND CIS USERS -------------------------------

Mail should be addressed to
callbook@n8emr.cmhnet.org

You MUST use the reply line now.. To many people with bad
reply paths.. I got tired of seeing the errors bounced back to me.

There are two command line options. One is REPLY. This command
is used to specify the return path to use for the callbook request.
You can use internet @ or bang ! path format.

The second command is CALL. This command is used to specify a list of
callsigns. Each call sign is seperated by a white space. All other
lines and info are ignored.

E.G.
# mail callbook@n8emr.cmhnet.org
REPLY user@site.domain (your reply path, ! or @ format.)
CALL n8emr w5rrr (list of calls, space seperated)
^D
#

------------------------- PACKET RADIO ----------------------------------------

Mail should be sent to CBOOK@N8JYV.#CMH.OH.USA.NA
You MUST use both the REPLY and CALL option lines.
The REPLY line should be as follows n8jyv!HOME_BBS!CALL, where
HOME_BBS is your local packet bbs where you would normal pick up
your mail, CALL is your callsign.
You must include the n8jyv! in your reply path.. Packet mail will fail
without this.

E.g.
SP CBOOK@N8JYV.#CMH.OH.USA.NA
Subject ^M
REPLY n8jyv!w8cqk!n8emr
```

```
CALL n8emr w1aw
/EX
```

3901. Amateur Radio Elmers List Info and Administrivia

Posted-By: auto-faq 2.4
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.4 04/25/93 23:02:45
Changes: pit-manager.mit.edu is now rtfm.mit.edu

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.
Some of the more amusing are described at the end of this article.

Regardless of origin of the name, a "Ham" is universally recognizable as
one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or
designing TCP/IP packet networks, such experimentation has historically
spilled over into the mainstream such as was the case with Edwin
Armstrong, who developed the regenerative oscillator and FM radio, or
General Curtis LeMay (W6EZV) who was instrumental in making Single-
Sideband the communications standard for the Strategic Air Command
(1947-1992, now reorganized into a joint command called StratComm) and
eventually the U.S. Air Force. Although packet-switching techniques
originated from DARPA (Defense Advanced Research Projects Agency) and
the ARPANet, no one can deny the tremendous influence that amateurs
have had in demonstrating the viability of TCP/IP and AX.25
communications via radio links. The efforts of AMSAT (the Amateur
Satellite Corporation), including the development of many ham satellites
and the low-orbiting Microsats (communications satellites no bigger than
a breadbox that use store-and forward packet techniques), have certainly
advanced the state-of-the-art in communications, one of the defined
purposes of the Amateur Radio Service, as recognized by international
treaty.

Since in many cases hams are writing "the book", there is often no
"book" or other established reference for a beginner to refer to.
Traditionally, information has been passed on from ham to ham via word-
of-mouth. Like many of the traditional crafts, a variation of the
Master-Apprentice system has emerged, the Elmer-Novice relationship.
Called "Elmers" because they are usually older and wiser, having the
```

benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@unomaha.edu, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 4 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion posting to this message, "Amateur Radio Elmers Resource Directory." Since the list is cross-posted to rec.radio.amateur.misc, rec.radio.info, rec.answers, and news.answers on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp.cs.buffalo.edu /pub/ham-radio/elmers*
rtfm.mit.edu /pub/usenet/news.answers/radio/ham-radio/elmers/*

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/list
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

--
73, Paul W. Schleck, KD3FU

pschleck@unomaha.edu (personal mail)
elmers-request@unomaha.edu (Elmers List administrivia)

* Possible origins of the word HAM:

The acronym "Home Amateur Mechanic" or...

from the Cockney pronunciation of "L'amateur" or...

the initials of the founder of the American Radio Relay League, Hiram Maxim, W1AW (his actual middle name being Percy apparently notwithstanding) or...

from the call letters of one of the first amateur stations at Harvard, H.A.M. (please, no flames from W1XM at MIT)

Dale Mosby, N7PEX, offers the explanation that HAM must stand for "Hardly Any Money," considering the investment one could make in the hobby.

Knowledgeable individuals from the American Radio Relay League (ARRL), and other radio historians, seem to agree that the terms "Ham" and "Lid" (an inept operator) both originated with landline telegraphy. A "Ham" was a show-off and a "Lid" was a telegraph operator so inexperienced, he had to use a pot or can lid to rest his telegraph sounder on to properly copy the code.

As an interesting historical footnote, early telegraph operators may have been the first to experience the infamous curse of our communications age, Repetitive Stress (or "Carpal Tunnel") Syndrome (called "Glass Arm" in those days, which encouraged the invention of the semi-automatic or "bug" key).

(Larry E. McDonald, N6ZMB, wrote to point out another plausible origin, which doesn't necessarily contradict the ARRL version. The term "ham" may have been derived from "ham-fisted" or "ham-handed" to describe poor telegraph operators who were hired from the ranks of radio operators. Or maybe "ham-fisted" and "ham-handed" are derived from "ham." Who knows?)
